Subject: RE: Important Request Regarding City of Flint Water
Importance: High

Good morning,

We have been really busy with the media contacting the district this week.
Flint Schools has used jug/bottle water for food prep.

Is there a water filter that will filter out lead that the district could purchase?

Thank you,

Bernard Gladney Jr

You are receiving this email because you participate in the Michigan Department of Education's (MDE) Child and Adult Care Food Program (CACFP) or the National School Lunch Program (NSLP). Do you use the City of Flint water? If so, do you have a water filter, or an alternate source of water for your participants in the Child Nutrition Programs? Please respond to this email by COB Tuesday, January 26, 2016. Thank you for your time to respond to the MDE.

Louis,

Any idea what the SEOC MDE phone password is? There is a voicemail on the phone from yesterday, Kevin brought it to my attention in passing this morning. Jaclyn is not here at the SEOC at this time (could be at lunch or moving her office). Aimee was also not sure of the password.

SEOC Update Briefing – 1/27/16 09:30

- Priorities: Info on the recycling centers and volunteer update
- Capt. K will be in Flint today @ numerous events
- Light flurries early today, cold front late tonight – about ½ in accumulation
- No additional health updates
- LARA working on faucet replacement list within effected schools
- DEQ focused on sampling and a consistent message regarding sampling
- DEQ working on drinking water draft timeline – will be shared with this group when available
- Civil Rights working on reaching out to those feeling "left out" and how to reach them
- DTMB working to secure additional warehouse space
- DNR has taken over the lead mapping
- Remaining bottle collection sites established by tomorrow-other plans being developed
- Work group developing plan for next phase
- Press release went out last night reassuring the water is safe to bathe in
- Capt. K at press conference this morning w/ mayor, governor, and Rachel Maddow will be coming
- Next briefing at 16:00

Subject: SEOC update 26 January (16:00)

Here is the update:

General Comments: 17:00: Situation Reports due

Operations: Would like volunteer update. Hearing there is issue with not enough work to do (meeting afterwards). GIS issue. Going to addresses showing "not hit", finding they have been there multiple times. Working on securing another warehouse

Health/Human Services: Information gathering. No additional information at this time

Agriculture: Local entities getting together to discuss pets and testing of pets. Food compliance list process has been approved by JIC (hopefully posted tonight and updated daily after

DEQ: Sent updated water data to GIS for mapping and to JIC for publishing

LARA: No report

Human Services MDE reported MSD testing and the presence of USDA Branch Chief, School Nutrition Programs and Food Distribution, is onsite in Flint.

Red Cross: Started assembling water test kits again today. Open tomorrow from 9-7

Steve Betterly: 218 seniors have been tested for lead in Flint. 8 indicated levels over 5 micrograms. Increased concern at 10 micrograms.

FEMA: Good 360 (technology platform) has set up website to list administrative needs, can be met by groups or individual donors. Food Bank has been included. Short and long term needs

MSP: MDOC/National Guard: No report. Requesting data entry individuals to assist. Snow coming into area, Flint should be not be impacted (less than an inch)

DTMB: Resource requests. Printing requests. Working on those. Site at State Office Building should be set up by 5pm for federal partners

Local Liaison: Busy day. Nothing new to report.

Logistics: Make sure you update resource requests. All day with FEMA, local EOC on warehouse options. Working on food truck drivers

Planning: No report

Finance: No report

Recovery: Red Cross revisited 1300 homes today, using iPad application. Teams are going out, hearing they have been to address multiple times. Working to correct.

JIC: PIO met with recycling group. Working on social media posts for tonight and media event for recycling on Thursday. Press release tonight will address bathing in water and hit recycling. Food Bank indicating they are no longer accepting water donations. Will look into updating information. Press conference tomorrow time has been moved.

Make sure we are looking at the IAP (tasks). Stay focused on Incident Action Plan (IAP). Tomorrow Flint Coordinating Committee will meet for the first time. Spend a little time on SitRep to assist them in discussion.

Subject: RE: Can I get an update on what you got from Walter?

Dave,

Kevin Walters here. Former Lapeer administrator now with MDE. Working State Emergency Operations Center (SEOC) today for MDE.

Wondering if there is an update from GISD end on student identification, particularly those that reside within impacted Flint residence and attend school outside impacted Flint area(s) and those that reside outside impacted Flint area(s) and attend school within impacted Flint area(s)?

MDE is attempting to report that communication is complete from an educational institution standpoint, regardless of student residence. I know you mentioned hoping to identify resident students in City of Flint, and sharing that information with GISD Superintendents of impacted districts.

We are hoping to update the SEOC group today, if possible, during our 16:00 call.

Thanks again for your efforts. Please let me know if I can assist.

Phone number at SEOC for MDE is:

Thanks Dave! Hope things are well for you and GISD.

Kyle, Marla, and Mark, can you review this proposed update? There is an MSD section and an OSS update section. We need your OK for Kyle to send out later this week.

Colleagues,

I would like to give everyone an update on the Flint water crises.

First I want to thank all employees that have donated time and money to support the Flint community. There is on-going need to provide support and I want to recommend that you visit the following website it you want to continuing support for those citizens in need: http://www.helpforflint.com/ .

The Michigan School for the Deaf (MSD) which is located in the City of Flint has been affected by the water crisis. Not only are there affected students, but is administered by a mix of MDE employees and contracted support. 75 students that stay on the Flint Campus in dormitories. When warnings were issued concerning water quality, MSD responded by turning off water fountains and providing drinking water for everyone at MSD. The school building is new and has had no water quality issues. Steven Hall is a 75 year old building and water quality tests have indicated lead in the water. This past weekend the landlord replaced the fixtures at 62 faucets in the building and is in the process of replacing three drinking fountains. Once that is complete, the Department of Environmental Quality will do additional tests throughout the building. MSD is also coordinating blood testing for all their students.

Marla Moss has been assigned to a state team that is working on child nutrition training to help create resources that can help families and any one serving children. Proper nutrition has proven to help mitigate the effects of increased blood lead levels. Office of School Support Staff continue to work with all affected child nutrition providers, ensuring they are talking the proper precautions, using safe water sources, and are aware of the resources available during the crises.

MDE continues to have a presence at the State Emergency Operations Center (SEOC). OSSS staff are covering the SEOC shifts during the week and on the weekend. They keep the MDE leadership team up to date on the current situation and any breaking events. In addition, they provide coordination for all education related tasks that come up. They provide coordination between state and federal agencies, the governor's office, and non-governmental organizations that are working to help schools.

Over the past week the Federal government has sent in teams to help the state's effort. The federal representatives have been integrated into the support effort. State officials from the Department of Environmental Quality continue working with schools, child care centers, and other institutions to ensure that they are taking proper safety precautions related to water. The state is actively working water distribution, water testing, blood level testing, and distribution of bottled water.

If you have any communication to the field that is related to the Flint water crises you should coordinate your message with Marty Ackley. Marty will coordinate with the JIC to ensure that we have a consistent, accurate message.

If you have any questions on the Flint water crises feel free to contact me or Louis Burgess.

Kyle, Marla, and Mark, can you review this proposed update? There is an MSD section and an OSS update section. We need your OK for Kyle to send out later this week.

Colleagues,

I would like to give everyone an update on the Flint water crises.

First I want to thank all employees that have donated time and money to support the Flint community. There is on-going need to provide support and I want to recommend that you visit the following website it you want to continuing support for those citizens in need: http://www.helpforflint.com/ .

The Michigan School for the Deaf (MSD) which is located in the City of Flint has been affected by the water crisis. Subject: Flint Water Crises (SEOC update, January 26, 0930)

1. **State Recovery Operations continue** in Flint. Detailed review of outreach to apartment complexes and the process of identifying homes, vacant homes, homes that need to be contacted. State working to make sure they go back and reach any residences that have been missed.
2. **FEMA are not integrated in SEOC.** DTMB getting spaces for Federal staff to operate in Flint area. Marla Moss reported that Vista Fletcher, USDA Branch Chief, School Nutrition Programs and Food Distribution, is coming to Flint. I did not mention this at the briefing; but we should mention as soon as we have details.
3. Gongwer Message on **Head Start Availability**: I need to know if this should be briefed at the SEOC or added to the MDE daily situation report (SitRep).

4. **MSD update** (I did not brief this, but will add it to SitRep). Mark Bouvy reports that LARA has tentatively scheduled Stevens Hall for testing on 5 and 6 February. They are also working with parents to get their consent forms for Genesee County Health Department blood testing on February 8. Mark also report that have been getting abundant water donations.
5. **Office of Civil Rights.** Their commission has approved at least three hearings to be conducted in the Flint area.
6. **Reporting numbers.** I did not include any numbers in this update. Either the governor's office or the JIC should be source of all metrics related to the water crises.

Louis

Michigan Delegation Looks For More Head Start Availability In Flint

U.S. Sen. Debbie Stabenow, U.S. Sen. Gary Peters and U.S. Rep. Dan Kildee are urging the U.S. Department of Health and Human Services to make Head Start, a program providing early education, health, nutrition and parent involvement services, available to every eligible child in Flint.

The three sent a letter to Secretary Blanca Enriquez saying the Flint water crisis is cause for such an intervention.

"The developmental and behavioral problems from lead poisoning will require years of special treatment and wrap-around care for these children," Ms. Stabenow (D-Lansing), Mr. Peters (D-Bloomfield Township) and Mr. Kildee (D-Flint) wrote. "Therefore, we would like to formally request Head Start be made available to every eligible child in the City of Flint as soon as practicable and for at least the duration of a five-year grant period.

Last year, Congress approved an additional $135 million to expand the Early Head Start program, and the delegation asked Flint be included in the expansion. They also asked HHS to provide technical assistance to community applicants.

Children are especially vulnerable to the negative effects of lead exposure, which has been associated with attention deficit disorder and other cognitive, behavioral and developmental issues, the three indicated in a statement.

"Access to Head Start can assist with mitigating the potential negative health impact of lead exposure in Flint children," they wrote. "According to a report published by the U.S. Department of Health and Human Services last year, 'research demonstrates that children with developmental delays or at high risk for developmental delays benefit most from interventions that start at an early age.'"

Subject: Flint Water Crisis: 1630 call - 1/25/16

Meeting started with Assignment List reporting-each department reported in on their individual assignments. All reported information for each assignment is available in the "Menus" section of the Boards Page for 2015-10-01 City of Flint-Water Contamination/Shortage incident.

Go to:
Boards Page
Menus
Reference Info
ICS Forms
204 Assignment List

There you can see everyone's assignments

As for the rest of the call:
Planning: Reviewing daily map needs, Supporting the field with GIS maps, working on water/blood tests.
Health/Human Services: local agency liasons, short and long term metrics, approve Flint water plan.
FEMA: 60,000 filters and 5000 pitchers arrived today.
LARA: Reaching child care facilities, reassigned translation duties to DTMB.
DEQ: Coordinated with State Police Geographical system, long-term planning, forwarded several school reports for posting online.
Health Services: following up with 211 on requests, surge, needs.
Civil Rights: Commission will initiate hearings on the Flint Water Crisis in the next 30 days.
Red Cross: 11 Water Response Teams out today.
Safety: 65 troops on the ground, requested hand trucks from DTMB-will be here tomorrow.
DTMB: Resource requests, vans and u-hauls, space in the Flint Office building needs.
Fiscal: working with state agencies regarding processes, need to update spending plan.
Recovery: 1000 home goal today-2193 houses reached.

Subject: Water Testing

Louis,

FYI...

Not sure how far you looked into the ERA website, but a regulations link brought me to this page:

http://www.cdc.gov/mmwr/preview/mmwrhtml/00016599.htm

The DHHS and CDC are tasked with lead screening and education programs, and subsequent environmental and medical intervention.

Also on the EPA site in the "Laws and Regulations" Section:

Public water supply testing versus testing at schools

The lead testing protocols used by PWSs are aimed at identifying system-wide problems. They are not aimed at outlets and taps in individual buildings. Moreover, the protocols for sample size and sampling procedures for PWS compared to schools and child care facilities are different.

Under the LCR for PWSs:
•A lead action level of 15 parts per billion (ppb) is established for one liter samples taken at high-risk residences.
•If more than 10 percent of the samples at residences exceeds 15 ppb, system-wide corrosion control treatment may be necessary.
•The 15 ppb action level for PWSs is therefore a trigger for treatment rather than a health-based or exposure level.

EPA recommends that schools collect 250 ml first-draw samples from water fountains and outlets. EPA recommends outlets be taken out of service if the lead level exceeds 20 ppb. The sample size was designed to identify specific fountains and faucets that required remediation. The school sampling protocol maximizes the likelihood that the highest concentrations of lead are found. The first 250mL are analyzed for lead levels after water has sat in plumbing overnight.

Subject: Testing Water

Hi Louis,

LARA does not monitor water testing, Tony sent me over to DEQ...

Jen at DEQ tells me that they do not oversee water testing either, but they do monitor the water treatment facilities.

She does not believe it is a requirement for licensing. She agreed that it is something that would most likely be a local decision.

Subject: MDE Assigned List Summary Response

Hi Louis,

Richard gave Jaime an "Assignment List" document that has a section titled "Work Assignments".

The statement under the "Tactics" heading lists item #2 as:

"Continue outreach to all school systems ensuring adequate water resources are available and proper testing is being done". (MDE)

Richard would like a summary of how MDE is accomplishing those tasks.

Do you have anything written that we can use as our response? If not, what would you like our summary to say? Here is my understanding of our efforts-please edit/add/or start from scratch if needed.

MDE continues to provide:
Information to Flint schools regarding the availability of drinkable water.
Waivers to existing school meal requirements as needed to protect student health and safety.
Directions to schools regarding how to effectively manage donations and delivery of water to agencies for affected areas.
Support proper testing of water by providing school information as requested.

Let me know...

Tom

Subject: MEDIA ADVISORY: Flint Water Response Operational Update

Flint Water Response Operational Update

FOR IMMEDIATE RELEASE
January 25, 2016

For more information contact:
Joint Information Center
888-EMD-TODAY (888-363-8632)

DATE:
Monday, Jan. 25, 2016

TIME:
11:30 a.m.

WHO:
Maj. Gen. Gregory Vadnais, Adjutant General, Director of Military and Veterans Affairs
Spl/F/Lt. Dave Kaiser, Michigan State Police
Representative, Genesee County Sheriff's Office
Representative, American Red Cross

WHERE:
Fire Station #8
202 E. Atherton Rd.
Flint, MI 48507

WHAT:
Representatives from the Flint water response will provide an update on activities and mission. The State of Michigan continues to coordinate response efforts in partnership with the city of Flint, Genesee County and local community organizations to ensure Flint residents have safe water resources.

For more information, visit www.mi.gov/flintwater, www.helpforflint.com, or call 2-1-1.

Subject: Flint water: update January 25, 2016

Kyle, for you 0930 update.

1. All messages and activities by state departments and their director's need to be coordinated through the SEOC.
2. **Michigan School for the Deaf**
    a. Lieutenant Governor visit scheduled 1/25/16 at 11:30 a.m.

b. Water testing results from 1/15/16: results in Stevens Hall (dormitory) show elevated levels of lead in water.
c. LARA and DEQ had water testing teams in the school and the Living and Resource Center (LRC) dorm.
d. The landlord for Stevens Hall had 62 faucets replaced over the weekend. Next step is to install three new drinking fountains. This is for mid-week.
e. Once all work in Stevens Hall is complete, MSD will schedule water testing with DEQ. This is a priority for the DEQ/LARA team.

3. **SEOC team.** The Office of School Support Services (OSSS) has been staffing the State Emergency Operations Center (SEOC) since January 5, 2016. The SEOC is covered 8:00 a.m.—5:00 p.m. Monday-Friday. Staff has also covered the SEOC on the weekends, including the daily updates.
4. **Child Nutrition Programs.**
   a. Starting 1/5/16 OSSS contacted all child nutrition program providers in Flint area to determine if they had sufficient water resources for food preparation and drinking water for participants.
   b. OSSS applied for and received waivers for all Flint area schools (LEA, PSA, non-public) from Healthy Hunger Free Kids Act requiring potable water to be served with meals.
   c. OSSS working with USDA to get more Fresh Fruit and Vegetables for Flint area schools.
   d. OSSS working with USDA to get additional food commodities for distribution to The Emergency Food Assistance Program existing sites. Food are higher in Vitamin A, calcium, and iron.
   e. Marla Moss is assigned to the state Child Nutrition education team to address nutrition training and education.
   f. Responding to information requests from USDA and governor's office.
5. **Water donations** for Flint area school.
   a. Walmart International and other corporations are stepping up with donations for the Flint community. Many of these are targeted to schools. MDE is working with the state logistics' chief and distribution lead for the best way to get water and filters to targeted schools.
   b. MDE Thursday communication sent on 1/21/16 to all districts, PSAs, non-publics, and education alliance highlighting donation and volunteer opportunities.

Subject: RE: - Flint Parent

Jaime,

I would like you to call Mr. Palmer. The school is Pierce School, part of Flint Community Schools. Here is the message:

1. Thank him for contacting MDE.
2. Recommend that he take this to the principal of Pierce School: Shalonda Byas,
3. Second step is to contact the Superintendent for Flint Community Schools. Mr. Bilal Tawwab, . As a next step, he should contact the local school board.
4. This is a local control state and the questions that he is asking are for the local administrators to respond. He may have been directed to call the state JIC, but his resolution should come from the building principal and local supe.

This is pretty standard response. Take notes and let me know the result.

Good luck,

Louis

Subject: Flint Parent

Hi Aimee:

Flint Parent called this morning asking for a return call. His number is He indicated his concern with Paris Elementary in Flint, that they have had an Environmental Study done which he has a copy of and it shows lead in the paint in the building, etc., that vents were boarded up and other procedures taken, but that parents were not notified, that he went to the Principal and Board of Education and was referred to the City of Flint. No one there is talking to him. He has also gone to 12 News and Fox News and is ready to take it further and would like more info and clarification as to why parents were not notified. I explained these calls are all being handled by the Center set up in Flint and that I would relay his phone call.

Subject: Flint Water Crisis (SEOC update, January 25, 0930)

1. Today is a planning day. Sit Reports due at 5pm, remember to archive old items.
2. Goal is to ensure all households get the resources they need while tracking commodities and data.
3. As of today, 37K homes reached. Pods distributed 16K cases of water, 5K filters, 3,500 filter cartridges, and 3K test kits.
4. National Guard on ground, Corrections working in warehouses.
5. FEMA: Continue to coordinate to ensure no shortage of needed resources.
6. Lieutenant Governor scheduled to visit MSD today at 11:30am.
7. Weather this today and this week should be pleasant – 35 degrees, some rain in the evening. No more than one inch of snow this week. Early February may bring significant rain or snow.
8. Outreach to Genesee Health Department, low call volume but patrons appreciate the Food Bank being open over the weekend.
9. Continued outreach to and sample gathering from food establishments this week.
10. DEQ: Chlorine issues at water plant. Testing will continue this week. Will update as progresses.
11. Red Cross has 11 teams out today canvassing. 416 volunteers Saturday, 300+ on Sunday.
12. Corrections assisting with warehouse duties. Also assisting with transportation of completed test kits.
13. National Guard has on ground today plus more at pods.
14. MDOT concerned about upcoming weather. Will need to consider moving cones, PODS, messaging and more if and when snow falls in area.
15. Rapid Response Teams ready for when HOT SHOTS are released. (?)
16. JIC: Fire Station #8 will have media update today. National Guard, MSP, and Flint Police will be onsite. Upcoming media events include: U of M Flint event & Rachel Maddeau town hall meeting this Wednesday evening.
17. Managing lots of random donations of water. Continue to create a recycling plans for bottles.
18. Reminder that this is a huge operation – never been done before. There will be friction at times but we are encouraged to continue to work together on tasks.
19. FEMA Reg #5 Leadership will be arriving at 3:30pm today and will then head to Flint.

Happy Monday!

Just received a call from Shane Peters at Bridgeman Schools. He was unable to get through to the Food Bank of Eastern Michigan regarding a donation and thought the phone number was not working. The phone number that has been posted is fully operational but they are having several issues due to the mass influx of calls. In case any other school districts call the SEOC regarding issues with phone numbers, please tell them to try the number again in a few minutes. Also, I didn't realize the SEOC phone number was released in Brian Whiston's memo, so consider this a heads up that school districts may be calling you while here.

Cc: MSP-EOC-MDEDUCTN; Chapman, Teri (MDE); Dennis, Ann (MDE); Bouvy, Mark (MDE)
Subject: Flint Water Crises (SEOC update, January 24, 1600)

1. Move to new location starting next week. State Secondary Complex; Harris Road. Instructions will be distributed. Reminder: take our saved stuff of the computer (Louis).
2. Jaime and Tom will pull duty on Monday, January 25, 2016.
3. Hot item: Lieutenant Governor scheduled to visit MSD on Monday.
4. Mark Bouvy, MSD, has been in contact with Penny Burger regarding possible cost reimbursement. State is not sure what is eligible for reimbursement; anything to be reimbursed will have to be documented.
5. MSD week update: As of 1/23/16: water testing complete in school building and LRC dorm. Stevens Hall will be tested when landlord finishes upgrades. As of 1/23/16: all water faucets replaced in Stevens Hall. 3 new drinking fountains on order; expected mid-week. Once fountains are installed, Stevens Hall will be scheduled for water testing. (CPT Kelenske asked that these details are added in MiCIMS and in SitRep; I had already added them to the system (thanks to Mark Bouvy.)
6. Ops: bar code markers; translated material; vulnerable populations? Tell GIS.
7. Health/Environment: publish test results in a consistent manner (same measure); publish results on web
8. AG: increasing questions about pets.
9. LARA: working Spanish translation
10. DEQ: reviewing the EPA order for tasks for other state agencies.
11. Public Safety: 60 Michigan Militia had a peaceful rally at city hall. No issues.
12. National Guard: wrapping up warehouse support; number to 75 supporting operation.
13. Correction staff will take over warehouse support.
14. Logistics: governor requesting lists of donations. Recycling: City of Flint is recommending sites; GM and United Way will partner.
15. Logistics: Open issue. Walmart wants to donate to schools. I am working with Logistics and distribution to have them work directly with GISD.

Hi Mark

Things are going good here - as good as they can for an emergency going on. Hope life is treating you well.

We are still unclear on exactly how we will be reimbursing state agencies. We have a request for federal assistance still in the hopper and I have a state disaster fund. Either way, we would be looking for costs directly related to this incident which would include the bottled water and units you are providing at the school. If you have other costs such as filtration units or have paid for water testing that would also be eligible.

I will be providing weekly cost updates to our state director here in the SEOC for the state budget office on Monday afternoons. If you're able to throw numbers together for Monday that would be great, but I could always catch them on the next report as well.

If you come across other costs you think could be eligible go ahead and send them my way and I'll take s look at them.

Thanks
Penny

Subject: Cost Identification related to the Flint Water Crises

Ann, Rose, and Mark,

Note: Penny is the MSP Finance Manager and she is working in the SEOC during the Flint Water Crises.

Ann and Mark, you both know Penny from your time at MDOT.

She is asking state agencies to identify any costs that can be reimbursed as part of this event. As far as MDE is concerned we are not paying any overtime, buying anything, or reimbursing employees that are serving in the SEOC. I do not think that we have incurred any reimbursable costs.

Do you think that any of the costs that have been incurred by the Michigan School for the Deaf due to the water crises should be identified? Water, filters, changes to the dormitory?

If you have question, you can contact Penny directly, but cc this email address at the SEOC (State Emergency Operations Center).

Subject: Flint Water: SEOC update (January 22, 2016)

1. LARA on-site at MSD doing site survey for water testing. MSD building landlord is replacing all 62 faucets in the dormitory building this weekend. Plan sent to SEOC and shared in Mi-CIMS. MSD is high interest because of Lt. Governor visit scheduled for Monday, January 25. DEQ has moved up the scheduled testing. MSD has a family briefing set for February 9. They are coordinating to get a health expert in to address the shower/bathing issue.
2. Walmart Corporation water donation handed over to DHHS Collections manager. Task complete for MDE.
3. Highlights from conference call:
    a. SEOC members: archive the sitrep and then enter new one with only actions from the current operation period.
    b. Flint looking to redo POD at Fire Station 6. (Not safe).
    c. Issue with PODs asking for identification. Raising concern with some immigrants. Purpose of ID or address was to log locations for the map to determine status of filter distribution. Procedures being clarified with NG manning stations.
    d. Sit reps needed by 5: p.m.
4. More on MSD and visit by LARA.
    a. landlord's action plan shared with Captain Kelenske and Mi-CIMS
    b. Team of LARA and DEQ staff have mapped school building and LRC dorm building for water testing. They will be back tomorrow for collecting samples in those areas.
    c. Testing in Stevens Hall dorm will be delayed until after faucets are changed and 3 new drinking fountains are installed.
    d. Stevens Hall drinking fountains are on order and probably will not be installed until next weekend, meaning testing in Stevens Hall is probably at least two weeks away.
    e. Plumbers have begun swapping faucets in Stevens Hall and are planning to be finished by Sunday evening.
    f. MSD has a date for Genesee County Health Department (GCHD) to be at MSD blood testing students whose parents consent. That will now be February 8th.
    g. MSD is polling staff to see if there is sufficient interest to have GCHD set up a blood testing clinic for all state and contracted staff.
    h. We are working with DHHS to have a health expert attend the February 9th parent meeting.
    i. MS has had many donations of water.
    j. Alesha Ginsler stopped by to say that Cece noted that bathing problems are accentuated because of feeding tubes and other open ports on student bodies. LARA is working this message statewide and not just at MSD. She wanted to make sure that MDE had help getting Dr. Eden Wells for their parent meeting.
5. Marla Moss will have the morning calls on Saturday and Sunday. I will take the afternoon calls. I plan to call in unless it is necessary to come into to SEOC.
6. Note that the SEOC will move to the Secondary Complex as of next Friday.

Mark, Alesha called me and said that she had already spoken with you. She wanted to make sure you had access to a community health expert for your parents meeting.

There are DHHS (the Community Health staff) that could be part of your presentation. At least we could ask. Kyle has strong relationship with the old DCH.

Let me know if you need any help. I am deferring this to Teri and you and Cece.

Kyle and Teri,

I was contacted by Alesha Gensler, LARA, about the planned presentation to parents about the water situation at MSD.

Alesha, is part of the LARA emergency management team, and was at the school today to help with the site survey for the lead testing. Her comments are based on sitting in the SEOC.

Mark Bouvy said they had some very angry parents. He has also shared information on bathing (showering) with the water. Alesha said that MSD should get some medical experts from the state for their Feb. 9 parent meeting.

I defer to Teri and her team on this. We can contact DHHS if we need to request support for their parent meeting. I am sure there are county or community resources available for the same.

Sent: Friday, January 22, 2016 3:22 PM
To: Walters, Kevin (MDE)
Subject: Flint approp

1. No MEGS option needed. Assume a paper application or process.
2. SAMS can be configured, so you can have the payments go out as we want: 25%; 50%, 100%
3. Ask Phil Boone for help with the SAMs option. On CMS, where it says approval by you, it is really Supe approval needed; you don't approve until after the Supe does.
4. Specify a paper application process.
5. Have a column for difficulty for Flint/GISD. I want to see as a recommendation: grant narrative, narrative budget, budget detail; we will also ask for a final report and a final expenditure report.
6. Run by Chad and Gary and see if they have any input.

SEOC Briefing – 1/21/16 09:30

- 2nd wave through neighborhoods has begun... ensuring everyone has their filters, etc.
- Weather today should be around 25 degrees with few flurries – nothing significant
- Homeowner samples – results so far : 68/853 are over 15 PPB (info for this group only)
- Questions for DEQ on if they have tested the water coming thru the filters to ensure they are working
- MDE – Prepared a letter to all schools containing info on volunteering and water donations – currently at JIC awaiting approval
- MDE – School for the Deaf has reporters there this morning – communicated with JIC. The school is not affected, dorms are. Capt wants to know the plan for ratifying the situation as soon as possible
- Door to door phase two is to receive additional supplies as well as checking on people to rebuild trust.
- 7 prisoners and 1 corporal monitoring warehouse
- 279 Natl Guard and airsmen on the ground today. Goal of 10,000 homes today!
- DTMB making agency outreach calls
- Keep resource request log cleaned up
- Monitory donations are preferred and more manageable
- Make sure requests are specific
- Traffic issues continue to be present at station 6. Capt asked MDOT to check it out and provide recommendations
- FEMA IMT will be in Flint for Health and Human Services today for a period of time
- Appeal went in yesterday appealing the denial of declaration of disaster
- Next briefing 16:00

SEOC Briefing – 1/21/16 09:30

- 2nd wave through neighborhoods has begun... ensuring everyone has their filters, etc.
- Weather today should be around 25 degrees with few flurries – nothing significant
- Homeowner samples – results so far : 68/853 are over 15 PPB (info for this group only)
- Questions for DEQ on if they have tested the water coming thru the filters to ensure they are working
- MDE – Prepared a letter to all schools containing info on volunteering and water donations – currently at JIC awaiting approval
- MDE – School for the Deaf has reporters there this morning – communicated with JIC. The school is not affected, dorms are. Capt wants to know the plan for ratifying the situation as soon as possible
- Door to door phase two is to receive additional supplies as well as checking on people to rebuild trust.
- 7 prisoners and 1 corporal monitoring warehouse
- 279 Natl Guard and airsmen on the ground today. Goal of 10,000 homes today!
- DTMB making agency outreach calls
- Keep resource request log cleaned up
- Monitory donations are preferred and more manageable
- Make sure requests are specific
- Traffic issues continue to be present at station 6. Capt asked MDOT to check it out and provide recommendations

- FEMA IMT will be in Flint for Health and Human Services today for a period of time
- Appeal went in yesterday appealing the denial of declaration of disaster
- Next briefing 16:00

Louis,

I've included, below, what was sent to me.

I hope to identify students residing in the City of Flint, and share this with the Superintendents of the Districts in which these students are enrolled.
After my conversation with Walter, it appears that it's a bit simpler than I originally thought – he indicated that the City boundaries are pretty much the boundaries for the Flint water system (there are 120 addresses outside the city limits – these addresses are what he provided in the attached pdfs)

If you're interested, I can share my work with you,
Dave

Kyle, I received attached email and attachments from Dr. David Treder an assistant Supe with GISD. Notice that Lisa Hagel was cc'd on the email. They are working to identify all students that live in an area served by the Flint Water system . These attachments are some addresses; GISD has student home addresses. They want to be able to tell local superintendents if they have students living in an area affected by the Flint water crises in order they can provide assistance. .

LEAD IN FLINT WATER

GENERAL INFORMATION

- The amount of lead found in some Flint homes' drinking water could affect kids' health.
  - Even small amounts of lead can harm kids' health because they are still growing.
  - Adults are less likely to be harmed by the levels found in the water.
- Filter your drinking water using a National Sanitation Foundation (NSF)-approved filter.
  - You can receive a free a NSF-approved filter if you use City of Flint water.
  - Call 2-1-1 to find out where you can pick up a free water filter.
- Some filters can remove up to 99 percent of the lead in water when used properly. To be sure your filter is removing as much lead as it can, carefully follow the instructions that came with it.
  - Run only cold water through the filter.
  - Change the filter cartridge as often as the instructions say.
- Even after changes to the water system, it may take a while before lead levels in your home's water drop.
- Lead is hard to avoid completely. It can be found in water pipes and brass water faucets, old paint, in dirt, at some job sites, and in metal used for some hobbies.

There are a number of steps you can take to keep yourself and your family healthy. Use the tips below to learn more about how to stay healthy:

LEAD IN WATER

Although your water may be a different color sometimes, it is not caused by lead. It's important to remember:

- You can't see, smell, or taste lead in water.
- Lead won't change the color of your water.
- The only way to know what your home's lead levels are is by having your water tested.

LEAD IN BLOOD

- If your children live in Flint or go to school or childcare in the City of Flint, their blood-lead level should be tested.
- You should contact your doctor about testing.
- Testing is available for free at the Genesee County Health Department. Call 2-1-1 if you need help getting there.
- If you are pregnant or nursing, and you have tested negative for high blood-lead levels, it is safe to breastfeed.
- If you are pregnant or nursing and have tested positive for high blood-lead levels, talk to your doctor about the safety of breastfeeding.

TIPS TO KEEP YOUR HOME SAFE FROM LEAD

WATER FILTERS

- Get your water tested. It's free. Call 2-1-1.
- Use a water filter. Call 2-1-1 for a free filter.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- Use cold, filtered water for cooking.
- Wash fruits and vegetables with filtered water.
- If you must use unfiltered water, run the water for at least five minutes before you use it. To save time and water in the future, it's a good idea to fill up as many containers as you can once you've run your water for five minutes.
- Drain and flush your water heater tanks regularly to remove any lead that has accumulated. Follow manufacturers instructions for maintenance or contact a licensed professional for assistance.

CLEANING

- Wash dishes, bottles and toys with unfiltered soapy water and dry before use.
- It is safe to use unfiltered tap water to mop floors and wipe down countertops.
- It is safe to wash clothes in your washer and dryer.
- Use door mats. Take your shoes off when indoors.
- Vacuuming carpets may pull more lead dust to the surface. Use a non-motorized sweeper to clean carpets.
- Clean windowsills and play areas often with paper towels and soapy water.

FLINT WATER RESPONSE TEAM

www.michigan.gov/flintwater

TIPS TO KEEP YOUR HOME SAFE FROM LEAD

IN THE BATHROOM

- Use filtered tap water to brush your kids' teeth.
- Adults can use unfiltered tap water to brush their teeth.
- You can use unfiltered tap water to shower or bathe, but don't let kids drink the water when they play in the tub.
- Studies done by the Centers for Disease Control and Prevention show that parents can continue bathing their children in the tub but bath time should be used for bathing only, rather than allowing children to play in the water for a long time.
- Lead will not cause rashes or other skin problems. However, if levels of chlorine or other cleaners are high in the water, it may cause itchy or dry skin (similar to what can happen when you swim in a pool).

CARING FOR PETS

- Use filtered tap water for your family pets' water bowls.
- You can use unfiltered tap water to bathe your pets.
- If you notice your pet acting differently than normal, contact your vet.

HEALTHY DIET

- Eat foods high in iron, calcium and vitamin C.
- Wash hands with soap and warm water before eating.
- If you need fresh and healthy food, call the WIC office at 810-237-4537, or for SNAP food assistance apply at www.michigan.gov/mibridges or visit your local Michigan Department of Health and Human Services office.

GOOD SOURCES OF IRON INCLUDE:

- Lean red meats, fish, and chicken
- Cereals with added iron
- Dried fruits (raisins, prunes)

GOOD SOURCES OF CALCIUM INCLUDE:

- Milk
- Yogurt
- Cheese
- Green leafy vegetables (spinach, kale, collard greens)

GOOD SOURCES OF VITAMIN C INCLUDE:

- Oranges, orange juice
- Grapefruit, grapefruit juice
- Tomatoes, tomato juice
- Green peppers

LEAD INFO

The Flint water response team is focused on the lead in water crisis. In additon to water, scientists have long been concerned about all sources of lead including lead paint, dust, soil, etc.

LEAD PAINT

- Homes built before 1978 likely have lead paint, both inside and outside.
- Old paint is the most common way that kids are exposed to lead.

DIRT

- If you live in the city, there may be lead in the dirt outside your home.
- Before 1996, gas and the exhaust from cars contained lead. More lead will be found in dirt in busy traffic areas.

DUST

- The dust in your home can have tiny amounts of lead from paint and dirt.

HOBBIES AND JOBS

- Solder, fishing sinkers, bullets, and stained glass framing materials are some items that may contain lead. You could also track home lead dust from your job site.

HAVE QUESTIONS?

- For more information about protecting yourself and your family from lead, visit www.michigan.gov/flintwater.
- To find out where you can get a free water filter, call 2-1-1.
- For a free water test, call 2-1-1.
- For more information about lead in your home and what you can do, call the Michigan Department of Health and Human Services at 1-800-648-6942.
- For information on how to help, visit www.helpforflint.com.

LURVEYWHITEVENTURES

January 21, 2016

Mr. Mark Bouvy
SOM Department of Education
1235 West Court Street
Flint, Michigan 48503

RE: Flint Water Crisis / MSD
MSD Campus, Flint, MI

Dear Mark,

Please consider this as an update regarding the most recent information regarding the Flint Water Crisis and our continued efforts to ensure that the water made available to all students is as safe as possible given this community wide crisis. Per our understanding the State of Michigan Department of Education through the administration at the Michigan School for the Deaf took the initiative to test the school for lead when the city wide issue was discovered in the fall 2015. At which time the school building tested negative. However as a precaution the school advised students and staff to cease using the water for drinking and made water coolers available in all areas of the building. As concerned Landlords of the property we observed announcements from the State calling for funds to replace old faucets in public school buildings. Since the dormitory was constructed by the State in the 50's Lurvey White felt compelled that some of the older faucets might contain lead and may need to be replaced. As a precautionary measure we took the initiative to test the water for which a test came back positive for containing lead on January 15, 2016. All other testing has provided no trace of lead at both the Michigan School for The Deaf school building, as well as Powers Catholic High School. Both schools share the same campus wide water loop.

In recent weeks, the State DEQ, The City of Flint, and most recently an UM-Flint Symposium regarding safe levels for ingestion of lead, as well as equations that support leaching have publicized varying information. The underlying theme to the information provided is that the most prevalent circumstances for exposure to lead, over the DEQ's accepted levels, are water systems which have lead service lines, older faucets which are more likely to have a lead content and lead solder connections.

Prior to 2012, the State operated the dormitory since it's occupancy in the early 1950's. Although we don't have specific knowledge of upgrades throughout the years, no lead service lines are evident in the building. The water supply lines, and branch lines are copper and look to have been replaced at some point in its history. We do not know the age of the faucets and/or the older dated fountains.

The unknown composition of the faucets is a concern that we feel we need to address in a proactive and swift manner to ensure that no lead exposure occurs at that point of use. **We will be working around the clock this coming weekend, January 23, and January 24, to replace all (62) faucets located in the dormitory building. Additionally, the following weekend, we plan to install (3) new watering stations at specific locations designated throughout the dormitory. These stations will**

LURVEYWHITEVENTURES

have point of use filtering for lead, particulates, odor and microbial. A bottle filling station to assist with bottled water for the dormitory students is also included. I have attached specifications for your records.

Additionally, we plan to follow these installations with lead tests but understand that the school and DEQ will be the primary parties responsible for ongoing lead testing in the facility. It is our hope that the replacement will result in Lead free tests in the building. However we believe that it is important the school continue to follow all precautionary measures that the government has outlined until such advisements change.

We feel that rather than wait for potential outside assistance, we cannot delay taking action. The safety of the students is paramount to any other scenarios which may arise out of the Flint Water Crisis.

Please feel free to contact me directly with any questions or further concern.

Very truly,

David W. Lurvey
Partner

ELKAY®

SPECIFICATIONS

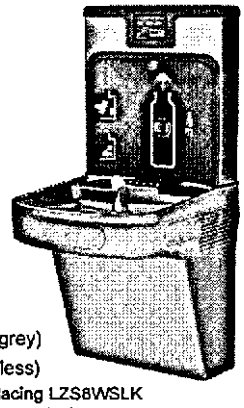
EZH2O® Bottle Filling Station with Filtered Single LZ Cooler

Model Enhanced LZS8WSLP & LZS8WSSP

RATED FOR INDOOR USE ONLY

PRODUCT SPECIFICATION

Unit shall include an electric water cooler with bottle filling station. LZS8WSLP & LZS8WSSP shall deliver 8 GPH of 50°F of drinking water at 90°F ambient and 80°F inlet water. Lower unit shall have pushbar activation. Bottle filling unit shall include an electronic sensor for touchless activation with an automatic 20-second shut-off timer. LED light illuminating the water dispensing area, brightening as water is being dispensed. Shall include a Green Ticker™ displaying count of plastic bottles saved from waste. Bottle filler shall provide a 1.1 gpm flow rate with laminar flow to minimize splashing. Shall include the WaterSentry® Plus 3000-gallon capacity filter, certified to NSF/ANSI 42 & 53, with visual filter monitor to indicate when replacement is necessary. Unit shall automatically detect a new filter and reset visual filter monitor accordingly. Unit shall have the ability to turn off refrigeration system as needed, in addition to self diagnosing system issues and relay messages related. Shall include integrated silver ion anti-microbial protection in key areas. Unit shall meet ADA guidelines. Unit shall be a lead-free design which is certified to NSF/ANSI 61 and 372 and meets Federal and State low-lead requirements. Unit shall be certified to UL399 and CAN/CSA 22.2 No. 120 & is FCC compliant.



☐ LZS8WSLP (light grey)
☐ LZS8WSSP (stainless)

These units are replacing LZS8WSLK and LZS8WSSK, respectively.

STANDARD FEATURES

- Sanitary, touchless activation with auto 20-second shut-off (Bottle Filler)
- Easy-touch front and side pushbar controls (Cooler)
- Visual User Interface display includes:
  - Innovative Green Ticker™ counts bottles saved from waste
  - LED Visual Filter Monitor shows when replacement is necessary
- WaterSentry® Plus 3000-gallon capacity Filtration System, certified to NSF/ANSI 42 & 53 (Lead, Class 1 Particulate, Chlorine, Taste & Odor)
- Integrated Silver Ion Anti-microbial Protection in key areas
- Quick Fill Rate: 1.1 gpm
- Laminar Flow provides minimal splash
- Real Drain System eliminates standing water
- Cooler panel finishes: Light Gray Granite Vinyl Clad Steel or Stainless Steel
- Automatic filter status reset with each filter change

COOLING SYSTEM

- Compressor: hermetically-sealed, reciprocating type, single phase. Sealed-in lifetime lubrication.
- Condenser: Fan cooled, copper tube with aluminum fins. Fan motor is permanently lubricated.
- Cooling Unit: Combination tube-tank type. Self-cleansing. Continuous copper tubing with stainless steel tank. Fully insulated with EPS foam which meets UL requirements for self-extinguishing material.
- Refrigerant Control: Refrigerant R134a is controlled by accurately calibrated capillary tube.
- Temperature Control: Electronic temperature control requires no adjustment
- Temperature Sensing Device: Fully solid-state temperature sensing has no moving parts.

CONSTRUCTION

- Stainless Steel basin with integral drain
- Galvanized structural steel cooler chassis provides structural integrity
- Stainless Steel bottle filler wrapper with ABS plastic alcove
- Cooler cabinet available as Light Gray Granite Vinyl Clad Steel or Stainless Steel (additional cost) construction
- Flexi-Guard® Safety Bubbler utilizes an infused anti-microbial pliable polyester elastomer to prevent accidental mouth injuries. Flexes on impact.

Replacement Filters: Available as Singles and Multi-packs. Order part numbers:

- 51300C (single)
- 51300C_3PK (three)
- 51300C_12PK (twelve)
- 51300C_24PK (twenty-four)
- 51300C_48PK (forty-eight)

Optional:

- Remote access to unit information/diagnostics Contact Elkay or order P/N 1000001858

Warranty: 5 year limited warranty on the unit's refrigeration system. Electrical components and water system are warranted for 12 months from date of installation or 18 months from factory shipment, whichever date falls first.

CAPACITIES CHART

Model	Voltage / Hertz	Chilling** Capacity	F.L. Amps	Rated Watts	Approx. Ship Wt.	ADA Compliant	UL399 and CAN/ CSA 22.2 No. 120 Certified	NSF/ANSI 61 and 372 Certified	NSF/ANSI 42 and 53 Certified (Filter only)	FCC Compliant

SPEC00259 (04/2015)

EZH2O® Bottle Filling Station with Filtered Single LZ Cooler Model Enhanced LZS8WSLP & LZS8WSSP

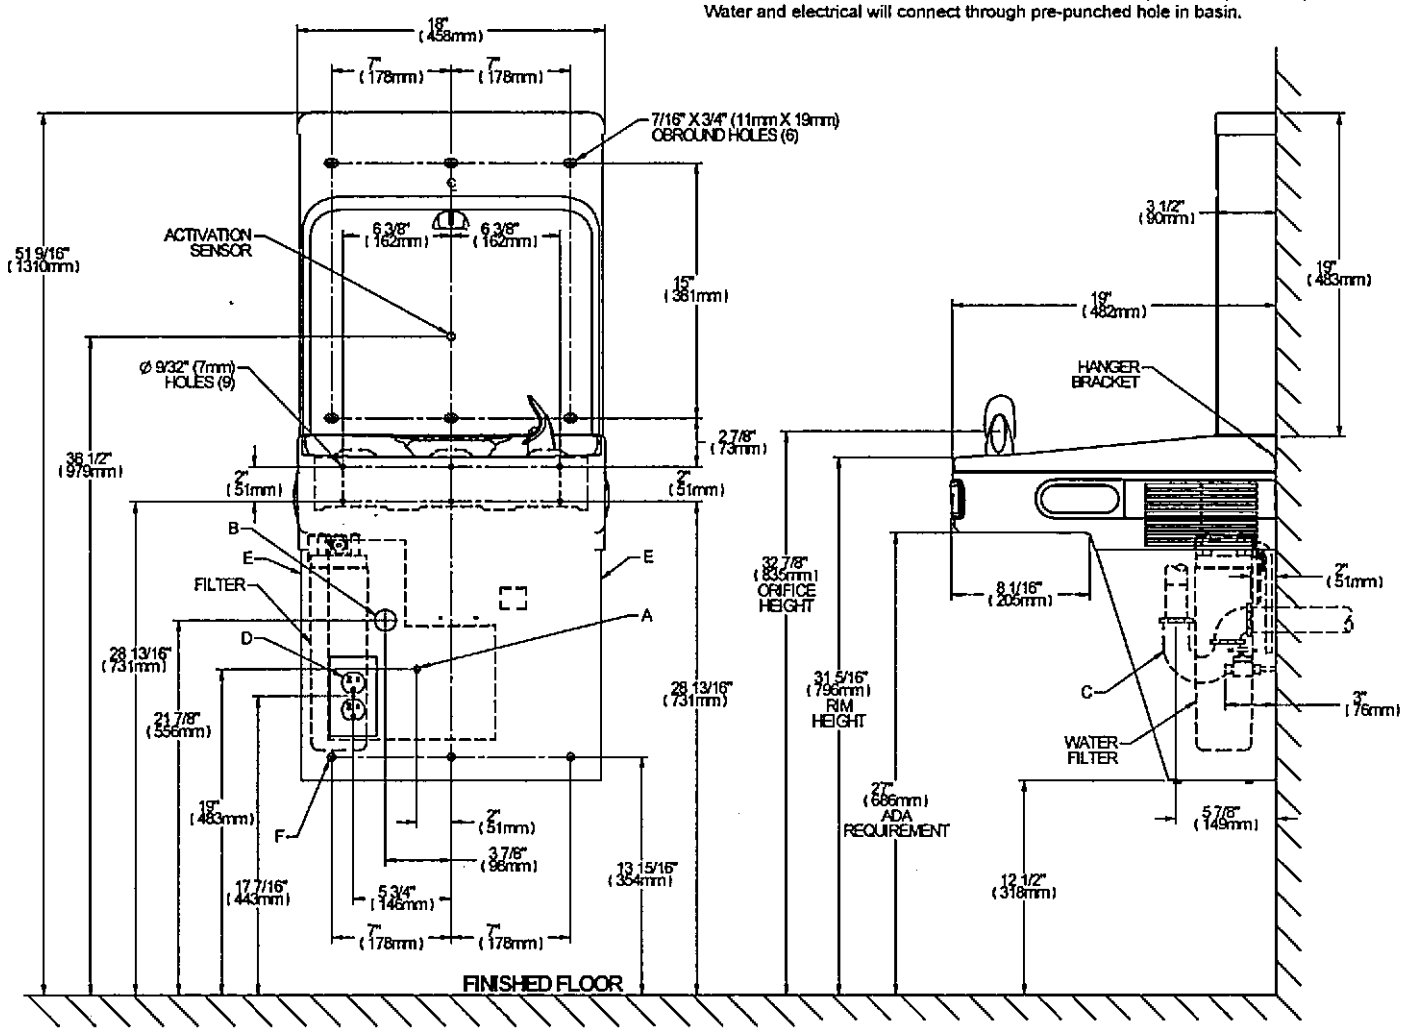
ELKAY®
ROUGH-IN DIMENSIONS

RATED FOR INDOOR USE ONLY

IMPORTANT! INSTALLER PLEASE NOTE:
These units are designed and built to provide water to the user which has not been altered by materials in the cooler waterway. The grounding of electrical equipment such as telephone, computers, etc. to water lines is a common procedure. This grounding may be in the building but may also occur away from the building. This grounding can cause electrical feedback into a water cooler creating an electrolysis which results in a metallic taste or an increase in the metal content of the water. This condition is avoidable by installing the cooler using the proper materials as shown.

NOTICE
This water cooler must be connected to the water supply using a dielectric coupling. The cooler is furnished with a non-metallic strainer which meets this requirement. The drain trap which is provided by the installer should also be plastic to completely isolate the cooler from the building plumbing system.

Bottle Filler unit will mount on bracket attached to wall by 6 holes (as shown). Water and electrical will connect through pre-punched hole in basin.



REDUCE HEIGHT BY 3 INCHES FOR INSTALLATION OF CHILDRENS ADA COOLER

LEGEND:
A = Recommended Water Supply location. Shut-off Valve (not furnished) to accept 3/8" O.D. unplated copper tube. Up to 3" (76mm) maximum out from wall.
B = Recommended Waste Outlet location. To accommodate 1-1/4" nominal drain. Drain stub 2" (51mm) out from wall.
C = 1-1/4" Trap (not furnished).
D = Electrical Supply (3) Wire Recessed Box Duplex Outlet.
E = Insure proper ventilation by maintaining 6" (152mm) minimum clearance from cabinet louvers to wall.
F = 7/16" (11mm) Bolt Holes for fastening to wall.
NOTE: Installations Must Use Ground Fault Circuit Interrupter (GFCI).

Subject: MI School for the Deaf

Hi Louis,

Alisha from LARA just informed me...

The water testing at MI school for the Deaf is happening this morning. Team is en route.

They will be testing drinkable water sources, not showers or other non-drinking options.

The landlord is replacing fixtures in the dorms. They will be told to stop so accurate testing can occur.

Tom

Louis,

This came up during our call... a reported concern is being investigated but the distribution procedures include that water is available to college students with a student ID. This is being reiterated at distributions.

Tom

Subject: RE: College Students

Richard, we don't do colleges.

This seems to be more of a distribution or POD procedure. My take is that they are giving out water to anyone so do we just tell the distribution teams to be aware that there are college students that also need water.

The request is to make sure the distribution sites understand that college kids won't have a driver lisence or a home address that shows Flint, yet they live in and around their school.

Mott Community College is in Flint: they don't have anything on their website.

UM Flint: https://www.umflint.edu/campus-water/campus-water-information

Subject: College Students
Importance: High

Good morning,

I'm hoping you can help with a constituent call we just got. Her child is a student at one of the local colleges and the students don't have water bills or local drivers licenses. We need to make sure that the water and filter distribution sites are providing water to students with a college student ID. Can you help us get this message to those sites ASAP?

Thanks,

Angela Minicuci

Kyle and Marty, info only. This is example of a corporation wanting to do good, but creating several hours of hoop jumping. He was driven by an internal board meeting that wanted to approve the expenditures, but it was to be just for schools. He reached in to this at multiple levels. We don't need water now, but may later when the current supply is exhausted.

Very much so – thank you!

We're trying to assess the need, so frankly we might be able to commit to helping to fulfill that need through either the end of the school year, or even as far out as the end of the calendar year. This information helps to confirm what the Flint District mentioned (they have water on-site, but are concerned about the long-term availability) and what I just discussed with the ISD (again, they have water to distribute to Head-Start etc., but are not sure about their supply for an extended amount of time). While the District mentioned they may have some storage capacity, the ISD does not appear to have much for storage capacity.

Our intention would be to make an announcement, and then work with each of you and the schools on the logistics – whether that might be one truck a week, or perhaps two trucks a week. Knowing we have connected with all the folks that will be making these decisions should help our Executives reach what I hope to be a meaningful decision this evening.

Respectfully,

Erik Hingst

Erik,

Based on your urgent request, the group of us just got together to discuss. Currently the Flint schools have been overwhelmed with water donations and are unable to take more until these donations slow down. We are willing to take these donations, either on or two trucks per week, into our warehouse and the schools will be drawing from our supply as needed.

Our donations management coordinator is Janet Hunter with the Michigan Department of Health and Human Services.

I hope this information will help you in your decision making this evening.

Subject: Flint Water Crisis - Schools
Importance: High

I'm truly sorry for the urgency, but our Executives are hoping to make a decision tonight. I very much appreciate the call I received from Louis Burgess from the State Department of Ed! I know he is trying to pull a map for all the impacted schools (public and private) and assess the need, but he is not aware that we now have a call with our Senior Leadership at 6:30 p.m. to talk all this through. I really need your help determining:

1. **Do the Flint area schools need bottled water?** There has been some confusion on this point and I understand that the residential need may be moving toward water filters and replacement cartridges, but there doesn't appear to be a clear answer for the schools to date;
2. **Is there any way to ballpark the number?** Each truck holds 36,000 bottles. Would the impacted schools (again assuming they still need bottled water) need 1 truck a week? Two trucks a week?

Your attention to this is very much appreciated!!!

Respectfully,

Erik Hingst

To: Alaniz, Aimee (MDE); Brewer-Walraven, Lisa (MDE); Broman, Susan (MDE); Burgess, Louis (MDE); Dixon, Janice (MDE); Doxie, Shulawn (MDE); Golzynski, Diane (MDE); Guerrant, Kyle (MDE); Houseman, Jennifer (MDE); Malnar, Jaime (MDE); Moss, Marla (MDE); Priest, Thomas (MDE); Walters, Kevin (MDE)
Cc: Dennis, Ann (MDE)
Subject: SEOC Update: Flint WAter Crises (1600, Janaury 21)

Update:

1. Great interest in the Michigan School for the Deaf. Lt. Governor scheduled to visit on Monday, 25 January. Letter sent to parents on elevated lead in Stevens Hall. Media interest in the story. Owner of the building is pushing the update of water fixtures in the dorm building. Plans to be complete by January 24. Mark Bouvy reports DEQ is scheduled to test water on January 29 at 0800.

2. Project Student Emergency Response to Violence (SERV) grant. Feds wrote and said the Flint crises does not meet the intent of the grant program. We have email from them if anyone needs to see it.

3. Supplemental for Flint. Ann Dennis has scheduled a meeting to review the plans to move the funds once they are approved. Grants office is looking at what is needed to get the funds out (criteria waiver, application, budget, oversight).

4. MDE All communication went out today from the Supe to all school districts (ISD, PEA, PSA, and non-publics) with donation instructions, volunteer opportunities, and request for funds.

5. GISD Assistant Supe, Dave Treder, calling for GIS overlay of Flint water. Dr. Hagel, GISD Supe, has been talking with LT Gov. I spoke with the GIS desk (Walter). Walter will contact Dave and determine what is needed. Dr. Treder has ability to use GIS to create an overlay of all GISD students and see if they live in areas affected. It was not easy being in the middle, so the GIS team will call Dr. Treder. MDE may have to create a task in Mi-CIMS.

6. Walmart called. Wants to know what the demand is for water. They are willing to donate a truck or two a week (36,000 bottles) for a short or long time. The wanted to know if there is demand. Worked with Carol in Logistics and contacted Janet Hunter at distribution. The demand for more water is not high right now. But the state does not want to turn away the water. Stand by. \

7. Dimondale reported to parents high lead levels in one of its schools. Info sent to Kyle and Marty.

8. Call update: nothing critical. Continuing operations.

Subject: Flint Water: Walmart wants to donate large amounts of water to schools in Flint

Janet and/or Jessi, the SEOC logistics section chief forwarded an email from Walmart (see below). They want to donate a truck or two of water a week to schools affected by the water crisis.

His first question: is there are need for water for the schools? They are willing to send 1/2 trucks per week with 36,000 bottles for the short term, through the end of the school year, or through the end of the calendar year. But they want to know if there is demand.

They are willing to coordinate with a food bank or the Intermediate School District, or local schools.

Do you have any insight to this request? I have talked with Erik and can be his contact.

To: MSP-seoclgc
Subject: Flint Water Crisis - Schools

We are hoping you can assist us with confirming the actual need for bottled in the Flint area schools. I realize that not ALL of the schools in the county are impacted, but in addition to the Flint District Schools, I understand some of the county schools are also on Flint water.

We are currently estimating 25,889 total students in Flint – public, private, charter schools etc. I have calls into the ISD and the Flint District to confirm that total number and hopefully give us a better idea of the actual schools that are impacted. In order to make a recommendation to the Walmart Foundation and our Executives, I could really use some help determining the actual scope of the need for bottled water for the impacted schools.

Respectfully,

Erik Hingst

> Greetings Holt Public,
>
> I am writing to share a memo that was sent to our Dimondale families. Every three years, we are required by the Department of Environmental Quality (DEQ) to test the drinking water at Dimondale Elementary. I am writing to inform you that elevated levels of lead were discovered during routine testing this past summer.
> We immediately began to correspond with our Dimondale families and below you will find a memo sent on August 25, 2015 as well as our mid-year update memo that was sent today. The safety and health of all of our stakeholders continues to be a priority!
>
> See below:

Sincerely,

David G. Hornak, Ed.D.
Superintendent, Holt Public Schools

January 21, 2016

Dear Dimondale Elementary Parents and Guardians,

In an effort to continue communication with all of you, I would like to provide you with a mid-year update concerning the water situation at Dimondale Elementary.

A random drinking water test, which is required by the Department of Environmental Quality (DEQ), was performed over the summer and elevated levels of lead were found in two of the samples. In August, I sent out information to all families about this situation and assured you that water stations would be available for all students since all drinking fountains would be disabled. Those water stations are still in place and the students and staff at Dimondale have adapted very well to this system for accessing drinking water.

Since that time, the district has been in constant communication with the DEQ and the Barry/Eaton County Health Department to work on resolving this issue. As part of this communication, I would like you to be aware that repairs were made to drinking bubblers, unused plumbing lines were removed and water supply lines were replaced with braided stainless supply lines. Each upgrade was completed with the overall improvement of the water quality in mind.

The next random water sample test to evaluate the lead levels will be conducted in March. We will continue to communicate the results of our water sample tests and remain hopeful that the improvements that we have completed will have a positive result.

In an event that you have additional questions regarding this issue, please contact me at 517-694-5715 or by email at SuptOfc@hpsk12.net
Sincerely,

David G. Hornak, Ed.D.
Superintendent, Holt Public Schools

***A copy of this email has also been sent to each family with children attending Dimondale Elementary.*

August 25, 2015

Dear Dimondale Elementary Parents and Guardians,

In an effort to over communicate with you, I would like you to read the following announcement.

Every three years, we are required by the Department of Environmental Quality (DEQ) to test the drinking water at Dimondale Elementary. I am writing to inform you that elevated levels of lead were discovered during routine testing. Although the samples were taken in the summer, we

are taking precautionary measures by providing alternative potable water sources for the students and staff to enjoy until we can have additional water samples analyzed.

The DEQ has a nationwide rule that allows lead drinking water levels to be at or below 15 parts per billion. As indicated above, this round of sampling occurred when the building was dormant, which may have contributed to the results being slightly higher than normal.

Moving forward, the water at Dimondale Elementary is safe for daily hand washing. We are safely disabling all water fountains in the building until we can complete the next round of analysis. Families can help by sending a filled reusable water bottle to school on a daily basis. When needed, children may refill a water bottle at one of the five water stations placed throughout the building.

We are looking forward to the beginning of the 2015-16 school year. By remaining true to our increased level of communication this year, we hope you find comfort in the proactive nature of our actions. By providing the DEQ with additional water samples, temporarily disabling water fountains, and by providing drinkable water for the students and staff to enjoy, we have been permitted to begin the school year as scheduled on September 8, 2015!

In the event you have additional questions regarding this issue, please contact me at (517) 694-5715 or by email at SuptOfc@hpsk12.net.

Sincerely,

David G. Hornak, Ed.D.
Superintendent, Holt Public Schools

Customer Service is a priority at the Michigan Department of Education – helping Michigan schools, families, and communities improve the achievement and well-being of ALL our children.

MICHIGAN Department of Education

The following email is to be shared with the *Early On*® Coordinators located at intermediate school districts.

Part C of the Individuals with Disabilities Education Act, commonly known as *Early On*® in Michigan, has federal regulations that require each state to maintain an Established Conditions List as part of its rigorous definition of developmental delay for eligibility. This Established Conditions List has been in existence since the full implementation of *Early On* in 1993. The Established Conditions List includes medical or mental conditions that could lead to a developmental delay. This list, as stated in federal regulation §303.21(a)(2) must include "diagnosed physical or mental condition[s] that- (i)Has a high probability of resulting in developmental delay; and(ii)Includes conditions such as chromosomal abnormalities; genetic or congenital disorders; sensory impairments; inborn errors of metabolism; disorders reflecting disturbance of the development of the nervous system; congenital infections; severe attachment disorders; and disorders secondary to exposure to toxic substances, including fetal alcohol syndrome." Lead is one of the medical conditions on the Michigan Established Conditions List. Any child, birth to three years of age with one of these conditions is automatically eligible for *Early On* with the appropriate medical documentation and other records to establish eligibility without conducting an evaluation of the child (§303.321(3)(i)).

In April 2015, the Centers for Disease Control and Prevention (CDC) released new guidance on educational interventions to support young children exposed to lead. In May 2015, a request was presented to the *Early On* state office as to whether Michigan had plans to lower its threshold for lead toxicity which was (at or above) ≥ 10 micrograms per deciliter. The Governor-appointed Michigan Interagency Coordinating Council placed the topic on the September 2015 agenda for discussion. At its November 2015 meeting, the Michigan Interagency Coordinating Council review voted to lower the Michigan threshold to the recommended CDC level of ≥ 5 micrograms per deciliter.

The revised *Early On* Established Conditions List can be found at the *Early On* website after January 15, 2015. A companion document that describes the rationale for the update is also available. For convenience copies are attached to this email.

Additionally, the following links have been provided as resources to support local service areas and families.

Jan, thank you for the note. *Marty says he gave you the phone and or email of the Joint Information Center. You can* contact them directly and let them know you are available to help.

I am responsible for the MDE portion of the State Emergency Operations Center. I have six staff, plus Kyle that are pulling shifts. I don't need any help here for now.

I am sure that the JIC would love to have an MDE rep.

Call me at .) if you have a question.

Louis

Subject: Michgian School for the Deaf

Update:

When the school first heard of the water lead issue back in September, they conducted their own testing at the school... which came back with clear results. The administrators at the school closed down the fountains and have been purchasing 35-gallon water dispensers (150 gallons/week) from Culligan that are placed near the drinking fountains. They also placed water filters at the cafeteria drinking fountain and kitchen sink for use in cooking/food prep.

MSD has been on the waiting list to get tested by DEQ since mid-December. The landlord (Lurvey-White Ventures) on its own, decided to have another test done on January 14 – this time testing both the school and the dorm. The dorm test came back with the elevated lead levels in the water. Test results are in Mi-CIMS 46193).

DEQ has confirmed test date for January 29, 2016 at 8:00 a.m. Request is to test both school and dormitory.

The school received word on January 21 from the landlord that they will expedite the replacements of the 62-65 faucets in the dorm beginning tomorrow (Friday) and expect to have them all replaced by the end of the weekend.

There are 167 total students at the school, 75 of which board in the dorm.

The landlord and school administration also are looking at either replacing the shower heads in the dorm, or installing in-line filters to the showers. In the meantime, resident students are using the showers at the school, which has been tested and found to be lead-free.

The parent letters were sent out January 20, 2016, by postal service and on the schools webpage. The next scheduled Parents Meeting is February 9, when parents can come and ask questions. The letter also informed the parents that they can contact Janet Kelley at the school in the interim.

Subject: Flint Water Crisis - Schools

We are hoping you can assist us with confirming the actual need for bottled in the Flint area schools. I realize that not ALL of the schools in the county are impacted, but in addition to the Flint District Schools, I understand some of the county schools are also on Flint water.

We are currently estimating 25,889 total students in Flint – public, private, charter schools etc. I have calls into the ISD and the Flint District to confirm that total number and hopefully give us a better idea of the actual schools that are impacted. In order to make a recommendation to the Walmart Foundation and our Executives, I could really use some help determining the actual scope of the need for bottled water for the impacted schools.

Respectfully,

Erik Hingst

Subject: SEOC Briefing 1/21/16 @ 09:30

SEOC Briefing – 1/21/16 09:30

- 2nd wave through neighborhoods has begun... ensuring everyone has their filters, etc.
- Weather today should be around 25 degrees with few flurries – nothing significant
- Homeowner samples – results so far : 68/853 are over 15 PPB (info for this group only)
- Questions for DEQ on if they have tested the water coming thru the filters to ensure they are working
- MDE – Prepared a letter to all schools containing info on volunteering and water donations – currently at JIC awaiting approval
- MDE – School for the Deaf has reporters there this morning – communicated with JIC. The school is not affected, dorms are. Capt wants to know the plan for ratifying the situation as soon as possible
- Door to door phase two is to receive additional supplies as well as checking on people to rebuild trust.
- 7 prisoners and 1 corporal monitoring warehouse
- 279 Natl Guard and airsmen on the ground today. Goal of 10,000 homes today!
- DTMB making agency outreach calls
- Keep resource request log cleaned up
- Monitory donations are preferred and more manageable
- Make sure requests are specific
- Traffic issues continue to be present at station 6. Capt asked MDOT to check it out and provide recommendations
- FEMA IMT will be in Flint for Health and Human Services today for a period of time
- Appeal went in yesterday appealing the denial of declaration of disaster
- Next briefing 16:00

Subject: Lead Testing in Dorms at School for the Deaf (MSD)

Kyle,

I spoke with Mark Bouvy today about Flint water and MSD. He has just informed Teri of an outlet sample with a high reading.

Last night, MSD was notified by the dormitory landlord that they had a lead level reading of 28 parts per billion in the dorm. The DEQ recommends school facilities take action if samples from any drinking water outlets show lead levels greater than 15 parts per billion.

-They are letting the parents know of this situation.
-The are working on blood testing for their students. Parents have to opt in for the testing. They are collecting information to send to the parents on the testing.
-there are approximately 75 students that board, ages 4-26.
-the land lord is working to replace the faucets in the dorm.
-When the initial letters went out last September warning of lead in the water, MSD started providing bottled water and adding filters in both the school and dormitory.

Subject: Lead Testing in Dorms at School for the Deaf (MSD)

Kyle,

I spoke with Mark Bouvy today about Flint water and MSD. He has just informed Teri of an outlet sample with a high reading.

Last night, MSD was notified by the dormitory landlord that they had a lead level reading of 28 parts per billion in the dorm. The DEQ recommends school facilities take action if samples from any drinking water outlets show lead levels greater than 15 parts per billion.

-They are letting the parents know of this situation.
-The are working on blood testing for their students. Parents have to opt in for the testing. They are collecting information to send to the parents on the testing.
-there are approximately 75 students that board, ages 4-26.
-the land lord is working to replace the faucets in the dorm.
-When the initial letters went out last September warning of lead in the water, MSD started providing bottled water and adding filters in both the school and dormitory.

Hello Janet,

It is correct we are asking about water donations only.

MDE would like a "checklist" to share with school district superintendents that provides direction and standards for collecting donated water. Any direction on what types of packaged water are acceptable, how it is to be packed and/or shipped, or other general guidance on overseeing a donation event would be helpful. We will include your guidance in an e-mail to all school district superintendents.

Thanks,

Tom Priest

So I talked to Kevin here with MDE. They are looking for things like what water is excepted, (bottle, can?) does it need to be palletized? Where would it go and such. Is that all in your donation plan that they can look at? They just want to work with you, to make sure it follows the proper channels and processes so we get the most benefit out of it.

Janet

We have been contacted by local school districts, some that will be hosting events and encouraging attendees to donate bottled water. MDE is working on a communication document to share with local districts today. Do you have a checklist or critical items that need inclusion within this document? We would like to include any critical items within that checklist for local school districts.

Thanks

Subject: RE: Local school district donation of water

So I talked to Kevin here with MDE. They are looking for things like what water is excepted, (bottle, can?) does it need to be palletized? Where would it go and such. Is that all in your donation plan that they can look at? They just want to work with you, to make sure it follows the proper channels and processes so we get the most benefit out of it.

Janet

We have been contacted by local school districts, some that will be hosting events and encouraging attendees to donate bottled water. MDE is working on a communication document to share with local districts today. Do you have a checklist or critical items that need inclusion within this document? We would like to include any critical items within that checklist for local school districts.

Thanks

Subject: FW: Local school district donation of water

Hi Louis,

Richard is out for the day, so Brian is in charge of our group. I saw this response from Janet and e-mailed her to clarify based on what Kevin described to me when I got here. Here is what I sent her:

Hello Janet,

It is correct we are asking about water donations only.

MDE would like a "checklist" to share with school district superintendents that provides direction and standards for collecting donated water. Any direction on what types of packaged water are acceptable, how it is to be packed and/or shipped, or other general guidance on overseeing a donation event would be helpful. We will include your guidance in an e-mail to all school district superintendents.

Thanks,

Tom Priest
Michigan Department of Education

Brian just gave me a copy of a "Donations Management Plan" that is here on site. This appears to be more "upper level" than what Kevin described as far as helping superintendents provide information to schools that want to host water donation events. Brian suggest we involve 211. Janet has responded that she was willing to provide direction.

I am sending a picture of the Donations Management Plan that Brian gave to me (from my work e-mail) for your review.

Please take a look and provide some direction as to whether this fits what you originally asked for.

Thanks,

Tom

Shereen,

I am in the SEOC (State Emergency Operations Center) today and they are requesting the following information:

1. How many students in City of Flint zip codes are identified as non-English speaking?
2. Where (building or location) are the non-English speaking students?
3. What languages (by location and number) are required?

Thanks. MDE has been tasked with working with Office of Civil Rights (OCR) on this.

Subject: Update Call 19 January (08:30)

Update from 08:30 call (SEOC):

- New operational period through next Tuesday
- Appeal paperwork being filed relative to denied declaration
- Notified that first canvassing of City of Flint will be complete by end of day, today
- Data from this effort may change National Guard mission
- FEMA here and sending staff to manage warehouse inventory
- DHHS reports issue from last night: 2-1-1 reports that some calls came in that said TDS meters were reading "red" for bottled water (appears specific to Canned Water for Kids/Spartan). Water samples being taken for testing. JIC developing communication to share with 2-1-1 in handling these calls
- LARA working to coordinate further school testing this weekend
- Human Services has given FEMA permission to use two conference rooms in Flint. MDE reports 22 languages represented in FCS (83% Spanish, 6% Arabic) related to EPA documents and work with OCR. Also working on grant analysis of Project School Emergency Response to Violence Grant, which is occurring today
- OCR focusing on area of Lansing associated with State of State address tonight
- PIO indicates news release on donating water will go out today. Also working on providing 2-1-1 messaging information for callers on water testing issue
- SEOC has been infiltrated by FEMA. Be aware of their presence at SEOC
- FEMA reports last 48 hours has provided valuable information. Work now begins. Reminder this is an Emergency Declaration, which is limited in time and scope (90 days). FEMA has four main targets; 1. Local presence, 2. Warehouse management, 3. Distribution, and 4. Technical Assistance
- NWS advises cold weather, with zero and sub-zero wind chills for today and tomorrow. Thursday, through weekend, is expected to warm up (30's).
- Next call is 16:00

Subject: FW: SEOC update - January 18, 1600

All:

1. I reported to SEOC to clean up email and get ready for the week.
2. SEOC continues to be fully staffed and lots of activity.
3. LARA reported bubblers are coming in and will installed at Freeman School. Pilot project.
4. DCH/DHHS Kathy Wahl reported that nutritional planning will continue. This is a long-term project with multiple agencies' involved.
5. Shareen Tabrizi, OFS, sent the English Language learner counts for Flint Public Schools. 338 in the data base; 83% are Spanish speakers; 6% Arabic; all other less than 1%.
6. Grants office will investigate grant opportunities for Flint as requested by DCH/DHHS.
7. DTMB finding office space for in bound Federal helpers in Flint.
8. National Guard participation up to over 200 this next week. They will be involved with distribution. (Boots on the ground.)
9. SEOC rep: coordinate with LARA and DEQ reps to get results for schools and child care centers. This is a sub-set of what they are reporting, so we may have to sift through the data.
10. First part of briefing was report on critical tasks.
11. MDE is looking to prepare a Thursday communication for MDE to send out to all school districts on donations. Janet Hunter (hunterj8@michigan.gov) is the Point of contact. Any provisions or water being donated must be put on pallets. Wendy Galbreath, director of logistics, gave me the name. Districts can cannot her directly and not go through 211.

SEOC reps: Keep Richard Thelen informed. Ask if he needs anything from us. Don't forget to sign in and out.

Subject: SEOC update - January 18

9:30 update - very short
- national weather service - cold continues; windchill below zero and concern continues for frost bite and volunteers; looking for hand warmer donations and possible DOC vans for warming of volunteers;
- DEQ - continues to work on sample bottle inventory; delivery of 21,000 sample bottles tomorrow
- HS - monitoring filter inventory to ensure adequate supply
- Civil rights mentioned that Progress Michigan invited 11,000 people to come to Lansing for Snyder's speech tomorrow night - expecting about 500
- Red Cross turned over fire stations to National Guard; had 10 teams out in field yesterday; media push for more volunteers for their volunteer/reception center;
- DOC added more passenger vans yesterday; added one just for storage of supplies (warehouse on wheels);
- local emer op will be reaching out to Kettering and U/M Flint today for volunteers
- JIC will do social media of state employee volunteers with pics and videos today; future push will be for state, local and Red Cross volunteers together as a team; releasing Water Activity Map by 11:00 am today.

Louis - you may understand this - planning meetings are going to a seven day cycle now so next one will be next Monday.

Marla

Subject: Response to testing question

Kyle, here is the report from LARA. Michigan.gov/flintwater has some results posted. DEQ is posting results.

1. Tested:

Holmes STEM Academy
Freeman School (details on line)
Brownell STEM Academy (details on line)
Pierce School
Durant Tuuri Mott School
Eisenhower School (details on line)
Doyle School
Neithercut Elementary School
Potter School
Northwestern High School
Southwestern Classical Academy
Manley Child Care: tested on Saturday, no results
Eagle's Nest Academy (mapped, but they good not get in to test; no cooperation)
Central Administration
Central Kitchen

2. DEQ results on Website. Only three schools listed; October 2 initial screening is on line.

3. English language learners: 83% are Spansish; 6% Arabic; everything else is <1%.

Subject: Departing SEOC

I am departing the SEOC. I will be on the 1600 call today.

One thing: DEQ and LARA reporting doing testing at Manley School. Manley School has been closed since 2003; however it is a licensed child care facility (Manley Early Childhood Center). It is a Head Start operation. LARA is tracking where it is doing testing by category. I had them move Manley School from "school" list to Child Care Facility list.

Louis,
Attached is a file that includes counts of ELs (limited English proficient) students in Flint School District. The count is listed by school and by language. Please let me know how I can further assist you.

best,
Shereen

Louis,
Flint School District had 338 English learners in 2014/15 and is funded by us under Title III along with Title I, Part A and TItle II.

I don't have counts by school or by language but can try to pull these figures for you. How soon do you need this?

Shereen,

I am in the SEOC (State Emergency Operations Center) today and they are requesting the following information:

1. How many students in City of Flint zip codes are identified as non-English speaking?
2. Where (building or location) are the non-English speaking students?
3. What languages (by location and number) are required?

Thanks. MDE has been tasked with working with Office of Civil Rights (OCR) on this.

Subject: MDE: MEMP review for 2016 revision

Zach: I am still reviewing technological and WMD procedures. They are fine as is, but I am looking into some minor changes. Please note bullet 3.

1. Technological disasters. The TECHNOLOGICAL DISASTER PROCEDURES are fine for MDOE. No changes required.

2. WEAPONS OF MASS DESTRUCTION ATTACK PROCEDURES: fine for MDOE. No changes required.

3. Section 4: EMERGENCY SUPPORT FUNCTIONS (ESFs) DESCRIPTION

Page 130 of this section states:

- **Coordinate use of Michigan School for the Deaf resources to support emergency operations.** The MDOE EMC is responsible for the following tasks related to the use of these resources:

➢ Maintaining a log of all key decisions, activities, and conversations related to the need for Michigan School for the Deaf resources
➢ Coordinating the use of the Michigan School for the Deaf properties, to include Camp Tehsmeheta, to support emergency operations (i.e., as a shelter, staging area, emergency coordinating facility, etc.)
➢ Providing for the use of School for the Deaf equipment, materials and supplies, as appropriate

Comment: The Michigan School for the Deaf is now a leased facility and should not be in the plans to support emergency operations. Recommend this section be deleted.

Subject: SEOC Update (January 16, 2016; Saturday)

0930 Call

1. Michael Moore has scheduled a 4:00 p.m. protest at Flint City Hall on 1/16/16.
2. Lt. Gov. Calley scheduled to meet with distribution teams in the city over the weekend. There is delay in the visit.
3. Weather: warm today (above freezing); temps will drop starting this afternoon; should be between 0 and mid-teens through next Thursday. This affects distribution teams.
4. CHECC: Community Health Emergency Coordination Center; operates 8:00 a.m.-5:00 p.m. including this weekend and Monday.
5. LARA and DEQ: working in Flint Schools this weekend; plumbers in Freeman School replacing faucets; testing/sampling in Manley School and Eagles Nest Academy. Manley School is closed in the EEM. I will check with the DEQ rep that reported the water testing at that site. (DEQ rep doesn't' know anything about Manely School. I let him know it is closed as a school. It was a child care center.) Possible the building has been re-purposed.
6. Lots of effort spent on distribution sites and distribution teams (POD = points of distribution); integrating National Guard staff and Red Cross volunteers; also coordinating use of other volunteers into the daily operations. Coordination of water, filters, testing kits. Issues at distribution 6; standard issue at POD: 1 gallon water per family member; case of water per family. State is working to ensure that water is distributed without controversy, but also fairly.
7. Department of Corrections providing 23 trucks with drivers.

8. Joint Information Center: working on messaging; news release last night; will keep telling the distribution team story
9. Flint Water website to be updated; make more useful.
10. 211 is best number for people to call if they want to help with the crises.
11. No outstanding information request for MDE. Announced that we had enrollment and staffing numbers for all Flint area schools. Spreadsheet was up-loaded into MDE sit rep.
12. Tony Katarsky in for Captain Kelenske. Tony noted that the state has never run this type of operation for this long. He thanked all the state agencies and the American Red Cross for the on-going operations. "Keep up the good work."

Kevin, OK. I have created a Flint Water Folder on the desktop. I put all spreadsheets there.

I also created a DATA subfolder in outlook for emails involving data.

I added a new MiCIMS entry with the Flint Schools spreadsheet from CEPI.

Tony Katarsky noted that the state has never done an operation like this, and thanked all the State agencies and the Red Cross for their/our efforts.

Thanks to everyone.

Folks, there are duplicate rows that represent situations where there is more than a single entity reported at an address. In some cases there will only be one building, in others, there may be multiples. Let us know if you have questions.

BTW – The team included both public and nonpublic entities. You may need more data from Bridges System related to child care centers. See Lisa Brewer-Walraven for that data.

Kevin, OK. I have created a Flint Water Folder on the desktop. I put all spreadsheets there.

I also created a DATA subfolder in outlook for emails involving data.

I added a new MiCIMS entry with the Flint Schools spreadsheet from CEPI.

Tony Katarsky noted that the state has never done an operation like this, and thanked all the State agencies and the Red Cross for their/our efforts.

Thanks to everyone.

PS – There are a few locations outside of you initial zane that were included since they appear to be either overlapping or within the Flint area on a map. (e.g., Davison and Grand Blanc). If you don't need them you can delete those rows from the table.

Subject: SEOC Briefing 1/15/16 16:00

SEOC Briefing 1/15/16 16:00

- EPA Pamphlets are being approved
- Behavioral Health Hotline staffed
- Collecting water samples at all food establishments and visiting gas stations
- LARA helping DEQ to get schools tested
- 2100 test kits have left the pods in the last 2 days – Over 40,000 kits have gone out since declaration was made
- MDE Update: Working on getting accurate student counts in all schools and child care centers – worked with LARA and received licensing info (capacity #'s) for ALL licensed child care. Working to get staff #'s from CEPI as well
- Lt. Governor came to SEOC at start of briefing
- MSP modifying process for tomorrow to "grab and go" style
- State Volunteers for next 3 days as of this time: 64 Sat, 84 Sun, 104 Mon
- As of briefing, 3055 homes visited
- 300 credential badges will be provided starting tomorrow for volunteers
- Rain parkas being delivered for teams
- Media was at county office building at Flint most of the day today, as the Governor had a meeting there today
- SEOC hours of Operation will continue to be 8:00 to 8:00.
- Lt. Governor wanted to wrap up briefing and thanked everyone for their hard work. He spent the day in Flint. Next focus will be long term needs, that will be critical.
- Next briefing 1/16/16 at 09:30

Thank You!
Aimee

Louis

I don't think there is an expectation for them to reach out, physically. We simply stated that OGS is working with F&F Child Care providers regarding Flint water situation.

Kept it generic. By sharing data that has been uploaded to the Activity Log at SEOC, that statement appears to be accurate.

Just my thoughts

Subject: FW: Flint Water Crisis

Shulawn and Lisa,

The bullet was pulled from another update, see below. When I received info from Lisa on this group of child care providers (families and friends) the question was who is taking care of them. So I said OGS was asking about them. I wrote the bullet below.

After further discussion with Lisa, we agreed that the door to door campaign would cover most, if not all, of these places. The bullet was then formalized in an unfamiliar manner. I told Lisa that I needed to know of any efforts that she takes to get info out to this group of providers.

I agree that we are not doing anything directly, but if a website is updated or there is a general communication that goes out let us.

Louis

Louis,

- Update from Marla on OSSS activities has been added to update folder.
- Update from Louis to MDE SEOC group has been added to update folder.
- MDE SEOC instructions document has been updated, as directed.
- An outlook group (MDE SEOC Update group) has been added. Those working SEOC can type in MDE SEOC Update group (which should pop up) to send messages to the entire group. Added Susan Broman, Lisa Brewer-Walraven, and Shulawn Doxie, as directed.
- Confirmed receipt of update for 09:30 call and have shared information with Richard.

SEOC team,

Two things. This is an update from Marla on OSSS activities. This should be filed in the SEOC update folder.

When you send an update report, please include Susan Broman, Shulawn Doxie, and Lisa Brewer-Walraven in the update.

If someone is Outlook Savvy, you can create a List to use instead of having to include all the names individually. Kevin will update the instructions to include these three names.

When we listen to the reports make sure that we give any updates on the door to door operations. The Office of Great Start staff are interested because we have families and friend child care operations that serve four or fewer kids. And we have to pay attention to them.

Thank you for helping with the Flint water crises. Everyone appreciates your time and effort.

Louis

Louis

I don't think there is an expectation for them to reach out, physically. We simply stated that OGS is working with F&F Child Care providers regarding Flint water situation.

Kept it generic. By sharing data that has been uploaded to the Activity Log at SEOC, that statement appears to be accurate.

Just my thoughts

Subject: RE: has anyone determined number of children 0-12 in Flint?

Tom and Trina, I do not think that there is a coordination of data asks. We have had a daily presence at the state emergency operations center, and I have responded to all requests for information or tasks that come from that.

Independently, each department is pursuing related tasks. DEQ is the lead on water testing. They were getting lists of places from LARA. I sent them a list of all schools with a Flint, Mt. Morris, or Burton address. I used the EEM to pull. Mike Zimmer was calling his SEOC rep and asking for info. I sent him what we had already provided. Then today, Nick Lyons office has reached out to Wendy Larvick for school buildings in Flint. Wendy got Brian Ciloski to pull schools and PSAs from EEM (but no non-publics).

This request for a break down on students and staff in buildings come from the Commander of the Incident. So we are responding by asking you the best way to get the info. Once we get the info we announce to everyone in the SEOC and we post on the Command Info System. We are working to de-conflict the requests, but when asked we go get.

I thought to ask you as the quickest way through this. I was also going to ask Dave Judd, because I think they just did a pull for data showing building level details. We have staff in the SEOC that can pull the data, but they don't know what to do. I am thinking there is an easy way to pull.

Because of the importance of responding in a timely manner, I was looking for the quickest way through to the solution.

Louis

Subject: RE: has anyone determined number of children 0-12 in Flint?

...and we have provided lists of facilities that were used to calculate costs associated with water testing to SBO. Are we sure we are coordinated on data asks? Why doesn't MDE have anyone who can do its own data analysis??? There are MANY users at MDE of the CEPI data sets.

That said, we will help, but geez...

Louis –
Is the ask for the number of children age 0-12 in any buildings in Flint/Mt. Morris/burton, or is it for total headcounts and total staff counts?

Trina

Tom, who is best person at CEPI that can help us get the pupil count of buildings in Flint?

THe real question is for those that are on Flint water, but we should provide a count for any building in Flint, Mt. Morris, and Burton addresses.

Do you have any info on staff by building? REP?

Louis

Louis,
Flint School District had 338 English learners in 2014/15 and is funded by us under Title III along with Title I, Part A and TItle II.

I don't have counts by school or by language but can try to pull these figures for you. How soon do you need this?

Shereen,

I am in the SEOC (State Emergency Operations Center) today and they are requesting the following information:

1. How many students in City of Flint zip codes are identified as non-English speaking?
2. Where (building or location) are the non-English speaking students?
3. What languages (by location and number) are required?

Thanks. MDE has been tasked with working with Office of Civil Rights (OCR) on this.

Louis

I talked with Jennifer and Kathy, as directed. They inquired about how Elizabeth Hertel was included, asking me to copy them on this response. I have also attached the document, as provided.

They indicate that this information is supposed to funnel through PIO and JIC?

MDE:

- Received approval of request to waive potable water requirement in National School Lunch Act for Flint Community Schools
- Food preparation is being done at sites with safe water
- Flint Community Schools indicates they are in possession of stockpiles of water
- Reached out to Genesee Intermediate School District (GISD) about other water related issues for other local districts and Public School Academies (PSA)
- Flint Community Schools indicates drinking fountains have been turned "off"
- United States Department of Agriculture, Midwest Regional Office asking for updates on Flint water situation. From USDA food preparation standpoint, there are no issues
- Request to GISD for listing of their communication regarding Flint water situation
- MDE contacted all Child Nutrition Programs (CNP) to solicit response to Flint water situation
- MDE updating spreadsheets from CNP with responses
- MDE shared spreadsheet with DEQ. Listing came from Education Entity Master (EEM) and was filtered for "Open" entities
- MDE leadership has been briefed. Dr. Eden Wells presented at January 12, 2016 State Board of Education meeting
- MDCE is contacting GCAARD (and perhaps Flint Food Bank) to inquire how MDE can help to ensure household food distribution programs (TEFAP and CSFP) go as planned/uninterrupted

- MDE is working on Nutrition Plan in coordination with other agencies (MDCH, MDARD, LARA, etc.) on the development of The Nutrition Plan. Marla Moss is the Agency Representative on this newly developed team.
- MDE is working with Office of Great Start (OGS) in working with Family and Friends Child Care providers (less than 4 children) regarding Flint water situation
- MDE and Civil Rights working on distribution of EPA document (English and Spanish) through school buildings, including students and staff members

PIERCE ELEMENTARY SCHOOL

Outlet Sampling and Plumbing Assessment Recommendations

1101 West Vernon Drive, Flint, Michigan 48503

DEQ

BACKGROUND INFORMATION

On Friday, November 6, 2015, the Department of Licensing and Regulatory Affairs (DLARA) and the Department of Environmental Quality (DEQ) conducted an assessment of Pierce Elementary School's plumbing system to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. The southernmost out-building, in addition to the main school building, were included in the assessment. The assessment identified the following potential sources of lead leaching into drinking water:

- Lead solder joints on copper piping
- Brass valves and brass fittings
- Brass components in fixtures
- Galvanized piping

The assessment identified 34 faucets or fountains that provide water for drinking, cooking, and/or food preparation: 32 faucets/fountains in the main school building and two faucets/fountains in the southernmost out-building. The other two out-buildings had no working water fixtures. A total of five additional faucets or fountains were identified as inoperable and were not assessed or labeled for sampling, as follows:

- Main building, Room 112, classroom faucet (no cold water connection)
- Main building, Gym, drinking water fountain
- Main building, Gym, drinking water fountain
- Main building, Hallway to out-buildings, near Room 306, drinking water fountain
- Middle out-building, drinking water fountain

The DEQ and DLARA Team (Team) developed a sequence for sampling the faucets/fountains in each building based on how the water is expected to travel through each building.

On Saturday, November 7, 2015, the DEQ and the DLARA completed sampling of the 32 faucets/fountains in the main school building, and the two faucets/fountains in the southernmost out-building, each in the order determined by the plumbing assessment from the previous day, following a stagnation period of over 12 hours. At each of the 34 faucets/fountains identified, the Team collected four samples. Two initial, 125-milliliter samples (P1 and P2), were collected immediately after turning on the tap. The water was then flushed for 30 seconds and a third, 125-milliliter sample (F01) was collected. Finally, the water was flushed for another two minutes, and the fourth 125-milliliter sample (F02) was collected. These samples were used to determine the impact of any lead sources in and around each specific faucet/fountain and its connecting plumbing.

The Team then completed consecutive sampling at three of the 32 faucets/fountains in the main school building, and one of the two faucets/fountains in the southernmost out-building. This consecutive sampling was used to determine the impact of any lead sources located deep in the supply plumbing at each of these buildings. The four sites comprised of one site at the far end of the northern supply line, two sites along the south supply line near the mid-point and at the far end, and one site at the out-building. At each of these four sites, the Team collected 10, 1-liter samples. The 10 samples were collected immediately after turning on the tap, and consecutively, without any flushing time in between.

WATER SERVICE INFORMATION

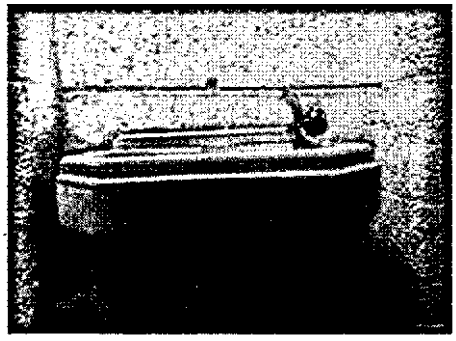
A four-inch diameter cast iron or ductile iron water service line enters the boiler room. The boiler room is located near the middle of the west side of the main building. The water line enters on the south side of the room. The cold water piping transitions into copper piping inside the boiler room. In one area beneath pipe insulation, staff observed what appeared to be a lead bushing. The cold water supply line exits the boiler room. Exiting the boiler room, one cold water supply line appears to serve the north corridor, and one cold water supply line appears to serve the south corridor.

The middle and southernmost out-building appears to be served from the main building off of the supply line serving the south corridor of the school. Skirting around the bottom of the out-building unit prevented an assessment of the service line to this building. The northernmost out-building is not occupied and was not assessed.

Outlets with Lead Levels Greater than 15 Parts per Billion

The DEQ recommends school facilities take action if samples from any drinking water outlets show lead levels greater than 15 parts per billion. Based on the sampling conducted at 34 faucets/fountains on November 7, 2015, the following 25 drinking water outlets had lead water level results greater than 15 parts per billion. Each of these 25 outlets is listed below with its sample results, including a description of the potential source(s) of lead, and recommended actions to be taken by the school.

Outlet: **Bubbler Drinking Fountain (01DW001)**

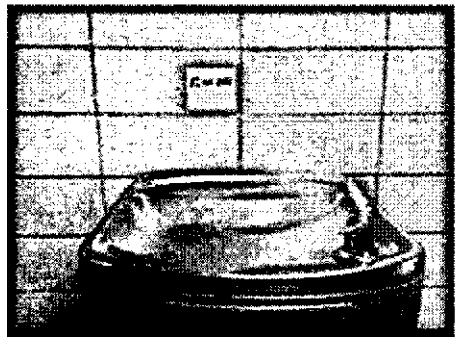


Location: Hallway next to Boiler Room, behind Stage
Results: P1=20 parts per billion, P2=2 parts per billion
F01=2 parts per billion, F02=non-detect

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is made of chrome-plated brass. Connecting plumbing should be checked for brass components, including brass valves.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: **Water Cooler Fountain (01WC002)**



Location: Hallway next to Mechanical Room, north corridor
Results: P1=8 parts per billion, P2=13 parts per billion
F01=35 parts per billion, F02=19 parts per billion

These results suggest the lead may be from the water cooler unit and the connecting plumbing. The water cooler is an Elkay model. This model may contain brass components. Connecting plumbing to the cooler unit may also contain brass components.

Replacement of this water cooler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location and needs to be completed for use. If replacement is not currently feasible, SHUT OFF THIS WATER COOLER FOUNTAIN AND **DO NOT USE THIS WATER COOLER FOR DRINKING OR COOKING.**

Outlet: Sink Faucet (01CF003)

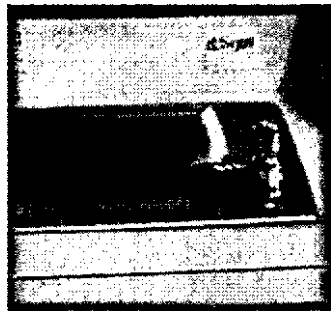
Location: Classroom 109, northeast wall
Results: P1=26 parts per billion, P2=17 parts per billion
F01=9 part per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This model faucet typically has a brass tube in its deck body, and may contain some additional brass components. Connecting plumbing in the cabinet under the sink should be checked for brass components, including brass valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW004)



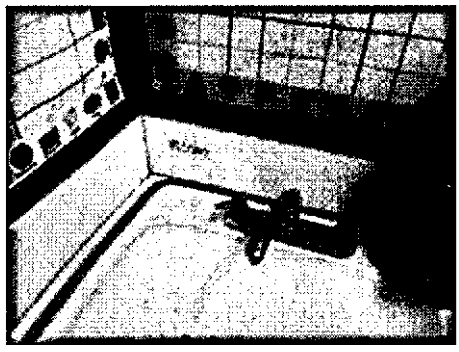
Location: Classroom 109, northwest wall
Results: P1=42 parts per billion, P2=17 parts per billion
F01=3 parts per billion, F02=1 part per billion

These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass and has a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and a brass shut-off valve.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (01CF007)

Location: Classroom 108, northwest wall
Results: P1=97 parts per billion, P2=132 parts per billion
F01=9 parts per billion, F02=2 parts per billion



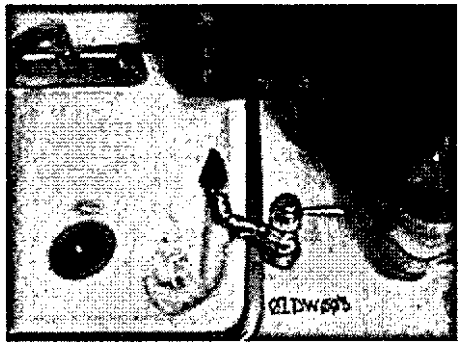
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in its deck body, may contain some additional brass components, and has a brass spout. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW008)

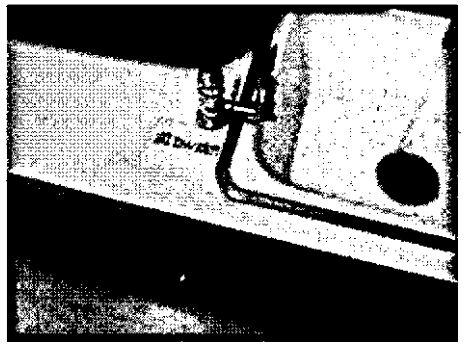
Location: Classroom 108, northwest wall
Results: P1=468 parts per billion, P2=75 parts per billion
F01=6 parts per billion, F02=4 parts per billion



These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink. Connecting plumbing under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW009)

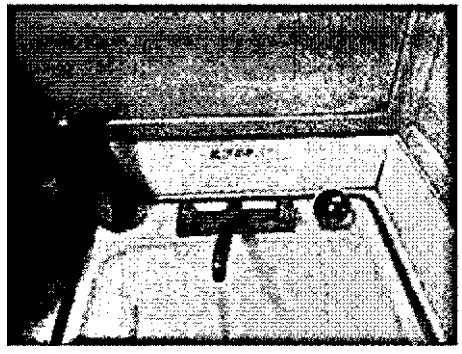


Location: Classroom 111, northeast wall
Results: P1=26 parts per billion, P2=38 parts per billion
F01=7 parts per billion, F02=3 parts per billion

These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (01CF010)



Location: Classroom 111, northeast wall
Results: P1=43 parts per billion, P2=22 parts per billion
F01=3 parts per billion, F02=3 parts per billion

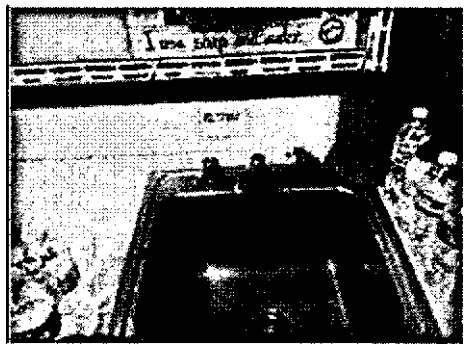
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in its deck body, may contain some additional brass components, and has a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (01CF011)

Location: Classroom 107, southwest wall
Results: P1=25 parts per billion, P2=11 parts per billion
F01=3 parts per billion, F02=2 parts per billion



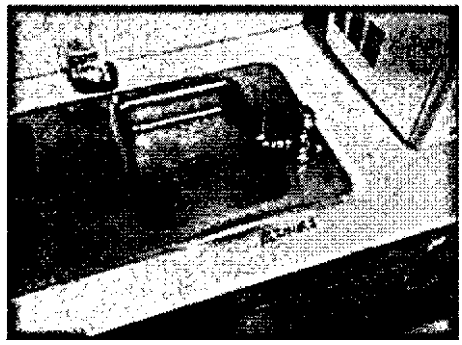
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in its deck body, may contain some additional brass components, and has a brass spout. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this sink faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

At the time of assessment, the faucet aerator/screen was found removed. If the faucet is not replaced and the aerator/screen is going to be reinstalled, it should be inspected for particulate accumulations, and scrubbed clean. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW012)

Location: Classroom 112, southwest wall
Results: P1=78 parts per billion, P2=11 parts per billion
F01=4 parts per billion, F02=3 parts per billion

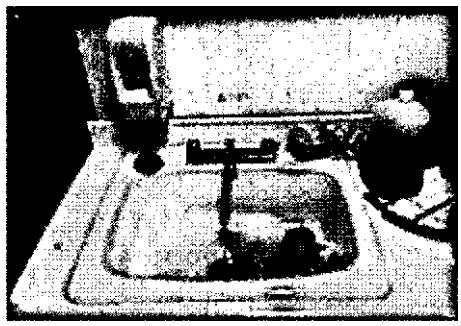


These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve and a brass connector on the underside of the sink. Connecting plumbing under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (01CF018)

Location: Classroom 301, northwest wall
Results: P1=13 parts per billion, P2=16 parts per billion
F01=4 parts per billion, F02=1 part per billion



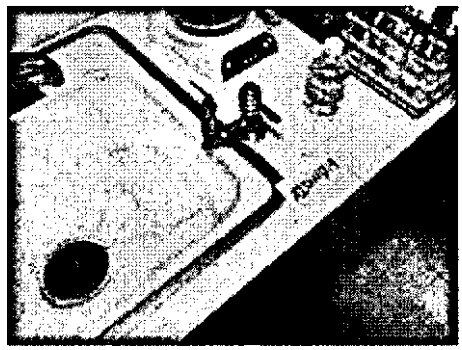
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in its deck body, may contain some additional brass components, and has a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also appears to have an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW019)

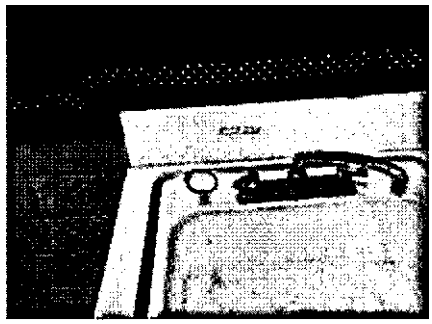
Location: Classroom 302, southwest wall
Results: P1=220 parts per billion, P2=23 parts per billion
F01=3 parts per billion, F02=2 parts per billion



These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (01CF020)



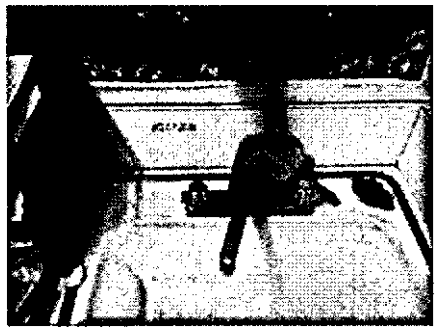
Location: Classroom 302, southwest wall
Results: P1=53 parts per billion, P2=30 parts per billion
F01=1 part per billion, F02=non-detect

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. The base of this faucet is chrome-plated brass, has brass components within the base, and a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also appears to have an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (01CF021)



Location: Classroom 306, southwest wall
Results: P1=15 parts per billion, P2=50 parts per billion
F01=8 parts per billion, F02=3 parts per billion

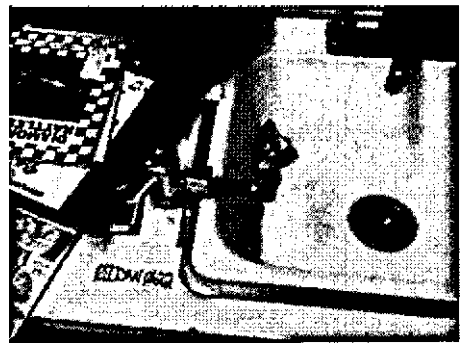
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in its deck body, may contain some additional brass components, and has a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also appears to have an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW022)

Location: Classroom 306, southwest wall
Results: P1=17 parts per billion, P2=6 parts per billion
F01=4 parts per billion, F02=13 parts per billion

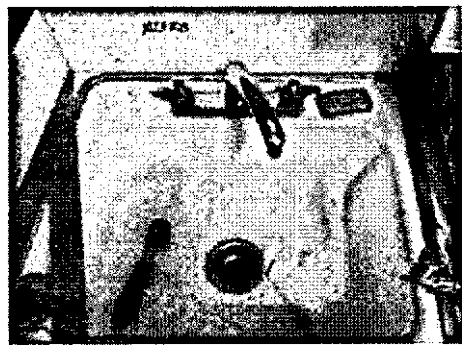


These results suggest lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder. The increase in the fourth sample (F02) results may be a result of excessive water stagnation in this area of the building.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location, along with an overall flushing program. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (01CF023)

Location: Classroom 312, southeast wall
Results: P1=22 parts per billion, P2=14 parts per billion
F01=9 parts per billion, F02=6 parts per billion



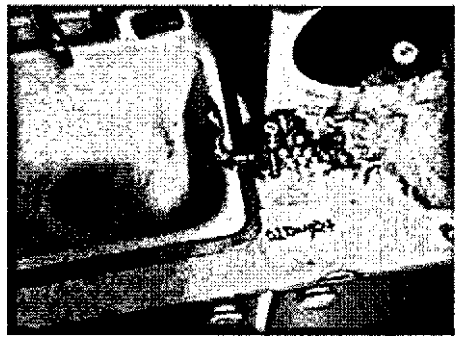
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Chicago Specialty. This model faucet typically has a brass tube in its deck body, may contain some additional brass components, and has a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also appears to have an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW024)

Location: Classroom 312, southeast wall
Results: P1=36 parts per billion, P2=8 parts per billion
F01=6 parts per billion, F02=4 parts per billion

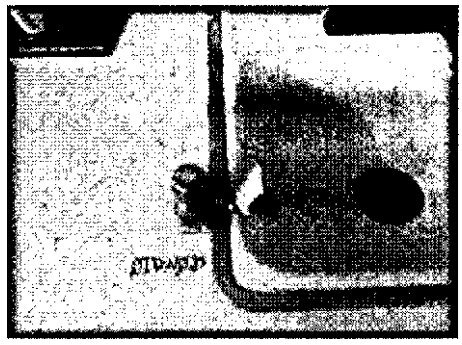


These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW025)

Location: Classroom 307, southwest wall
Results: P1=191 parts per billion, P2=69 parts per billion
F01=28 parts per billion, F02=6 parts per billion



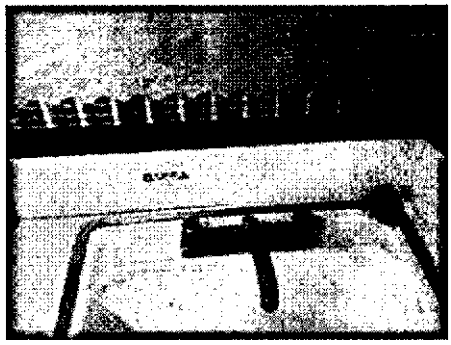
These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass and has a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and a brass shut-off valve.

Copper results for sample P1 at this location were also at levels above which the DEQ recommends school facilities take action. Copper results suggest these same brass components are contributing to this condition.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead and copper exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead and copper concentrations and lead and copper exposure.

Outlet: Sink Faucet (01CF026)

Location: Classroom 307, southwest wall
Results: P1=61 parts per billion, P2=36 parts per billion
F01=7 parts per billion, F02=4 parts per billion



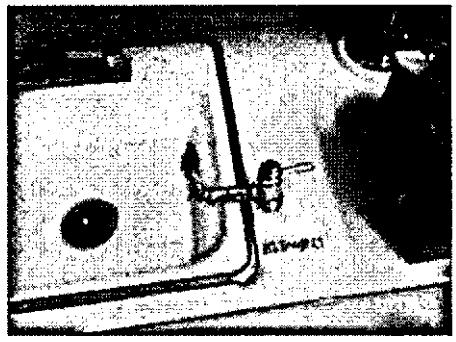
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in its deck body and, may contain some additional brass components, and has a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also appears to have an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW027)

Location: Classroom 311, southeast wall
Results: P1=23 parts per billion, P2=19 parts per billion
F01=61 parts per billion, F02=20 parts per billion



These results suggest lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder. The increase in the third (F01) and fourth sample (F02) results may be a result of excessive water stagnation in this area of the building.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location and needs to be completed. In addition, an overall flushing program is required – even after this bubbler is replaced. If replacement is not currently feasible, SHUT OFF THIS BUBBLER AND **DO NOT USE THIS BUBBLER FOR DRINKING OR COOKING.**

Outlet: Sink Faucet (01CF028)

Location: Classroom 311, southeast wall
Results: P1=17 parts per billion, P2=19 parts per billion
F01=38 parts per billion, F02=15 parts per billion

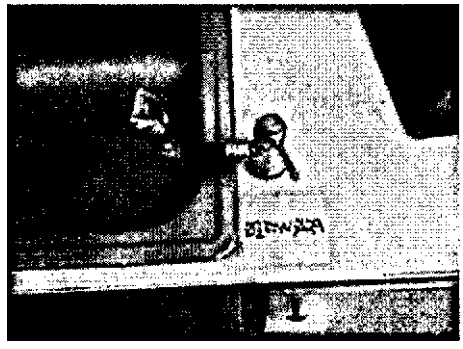
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in its deck body, may contain some additional brass components, and has a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location and needs to be completed. In addition, an overall flushing program is required – even after this faucet is replaced. If a replacement is not currently feasible, **DO NOT USE THIS FAUCET FOR DRINKING OR COOKING.**

This faucet also appears to have an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW029)

Location: Classroom 308, northwest wall
Results: P1=78 parts per billion, P2=23 parts per billion
F01=5 parts per billion, F02=2 parts per billion

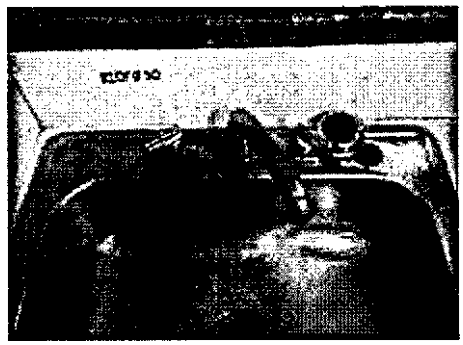


These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink. The bubbler also has been modified with added copper couplings below the spout. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes.

Outlet: Sink Faucet (01CF030)

Location: Classroom 308, northwest wall
Results: P1=60 parts per billion, P2=9 parts per billion
F01=11 parts per billion, F02=3 parts per billion



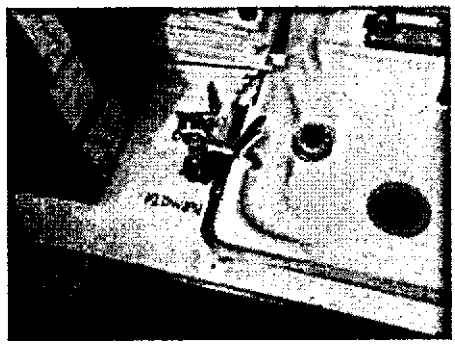
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be manufactured by Central Brass. This model faucet typically has a brass tube in it deck body, may contain some additional brass components, and has a brass spout. The spout's chrome finish is worn down to the brass. Connecting plumbing in the cabinet under the sink should be checked for brass connectors, copper piping with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also appears to have an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW031)

Location: Classroom 310, northeast wall
Results: P1=29 parts per billion, P2=35 parts per billion
F01=73 parts per billion, F02=3 parts per billion

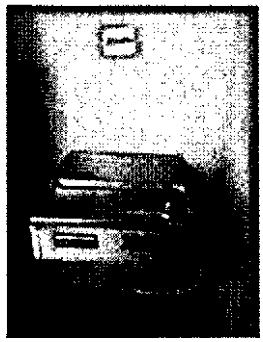


These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass and has a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Water Cooler (02DW034)

Location: South out-building, Temporary Classroom, northeast wall
Results: P1= non-detect, P2=54 parts per billion
F01=36 parts per billion, F02=2 parts per billion



These results suggest the lead may be from the water cooler unit. This model may contain brass components. Connecting plumbing to the cooler unit may also contain brass components.

Copper results for sample P1 at this location were also at levels above which the DEQ recommends school facilities take action. Copper results suggest these same brass components are contributing to this condition.

Replacement of the entire unit is recommended and will significantly reduce lead and copper exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead and copper concentrations and lead and copper exposure.

Outlets with Lead Levels 15 Parts per Billion or Less

While the remaining nine outlets showed sample results to be at levels requiring no further action, several recommendations have been identified.

The fourth sample (F02) at all nine outlets following approximately three minutes of use and flushing at a reduced flow resulted in reduced lead concentrations. This indicates that flushing these nine taps used for drinking, cooking, and/or food preparation for four minutes following periods of stagnation will further reduce lead exposure.

Five of these nine outlets are comprised of similar materials as the outlets listed above and could potentially experience higher lead levels under extended periods of stagnation. These faucets/fountains include:

- Bubbler Fountains in main corridor next to Men's Restroom, east of Library (01DW017), and Classroom 100 (01DW015)
- Sink Side Bubbler Unit in Classroom 110 (01DW006)
- Chrome-Plated Brass Base Faucets in Classroom 100 (01CF013), and Classroom 310 (01CF032)

Replacement of these fixtures with lead-free materials is also recommended.

The classroom faucet and four drinking water fountains identified as out of service in the Background Information, should be sampled prior to being placed back into service, or replaced with lead-free materials.

The remaining four outlets showed sample results of 15 parts per billion or less, requiring no further action or additional recommendations. These faucets/fountains include:

- Sink Faucets in Classroom 110 (01CF005), Classroom 100 (01CF014), and south out-building, Temporary Classroom (02KC033)
- Kitchen Faucet in the Teacher's Lounge (01KC016)

Consecutive Sampling Results and Building Plumbing Recommendations

The consecutive samples taken on November 7, 2015, at three sites in the main school building, and one in the southernmost out-building, provide additional confirmation that overall, the highest contribution of lead appears to be from the individual faucet/fountains and not from the larger diameter supply plumbing within the main school building or the out-building units. However, results from Classroom 310 also suggest that the southern supply line extending beyond the restrooms may be impacted by minimal water use and stagnation – specifically, the cold water line serving Classrooms 306-312.

A operational flushing procedure may further reduce lead contributions from this supply line caused by stagnant conditions related to its use. Routine flushing of the larger diameter supply plumbing at the end points of the distribution system, (for example at Classroom 100, Classroom 310 and Classroom 311) should be performed on a regular basis. Even if the identified outlets are replaced, the south end of the corridor serving Classrooms 306-312 may still benefit from a flushing procedure to further reduce lead contributions and other effects of stagnant water in this supply line.

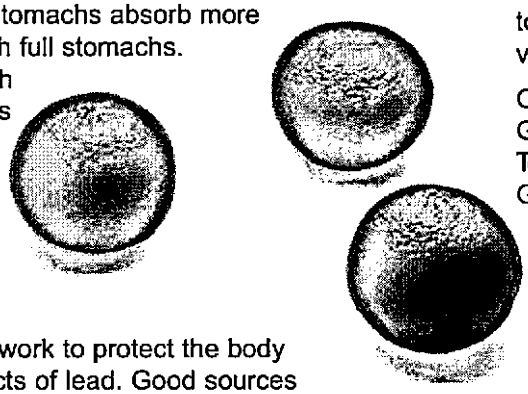
Results of the consecutive sample monitoring are listed in the table below.

Consecutive Sample No.	1	2	3	4	5	6	7	8	9	10
LOCATION	LEAD RESULT (PARTS PER BILLION; ND = NOT-DETECTED)									
Classroom 100 Sink Faucet (01CF013)	2	2	2	2	2	2	2	2	3	3
Classroom 301 Sink Faucet (01CF018)	4	2	2	2	1	1	1	1	1	ND
Classroom 310 Sink Faucet (01CF032)	4	5	6	4	3	3	3	3	3	2
Out-building Southernmost Kitchen Faucet (01KC033)	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND

Help Fight Lead Poisoning with a Healthy Diet

Regularly Eat Healthy Foods

Children with empty stomachs absorb more lead than children with full stomachs. Provide your child with four to six small meals during the day. The following nutrients can help protect your child from lead poisoning:

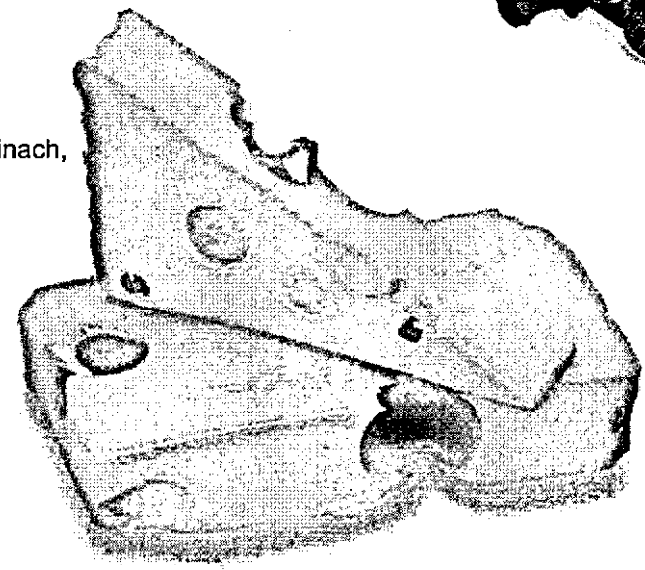


Iron-Rich Foods
Normal levels of iron work to protect the body from the harmful effects of lead. Good sources of dietary iron include:

Lean red meats, fish, and chicken
Iron-fortified cereals
Dried fruits (raisins, prunes)

Calcium-Rich Foods
Calcium reduces lead absorption and also helps make teeth and bones strong. Good sources of dietary calcium include:

Milk
Yogurt
Cheese
Green leafy vegetables (spinach, kale, collard greens)



Vitamin C-Rich Foods
Vitamin C and iron-rich foods work together to reduce lead absorption. Good sources of vitamin C include:

Oranges, orange juice
Grapefruits, grapefruit juice
Tomatoes, tomato juice
Green peppers

Simple Steps You Can Take

to Protect Your Family from Lead Hazards

If you think your home has high levels of lead:

- Make sure your children eat healthy, low-fat foods high in iron, calcium, and vitamin C.
- Get your children tested for lead, even if they seem healthy.
- Get your home tested for lead if it was built before 1978. Call 1-800-424-LEAD for more information.
- Always wash your hands before eating.
- Wash children's hands, bottles, pacifiers, and toys.
- Do not use imported pottery to store or serve food.
- Let tap water run for one minute before using.
- Use only cold water for making your baby's formula, drinking, and cooking.
- Regularly clean floors, windowsills, and other surfaces using wet methods that control dust.
- Wipe or remove shoes before entering your house.
- If you rent, it is your landlord's job to keep paint in good shape. Report peeling or chipping paint to your landlord and call your health department if the paint is not repaired safely.
- Take precautions to avoid exposure to lead dust when remodeling or renovating.
- Don't try to remove paint yourself!

Louis –
Is the ask for the number of children age 0-12 in any buildings in Flint/Mt. Morris/burton, or is it for total headcounts and total staff counts?

Trina

Tom, who is best person at CEPI that can help us get the pupil count of buildings in Flint?

THe real question is for those that are on Flint water, but we should provide a count for any building in Flint, Mt. Morris, and Burton addresses.

Do you have any info on staff by building? REP?

Louis

Do we want to mention that Tom will be calling GCAARD (and perhaps Flint Food Bank) to inquire how MDE can help to ensure household food distribution programs (TEFAP and CSFP) go as planned/uninterrupted?

Jaime

Also add the work on Nutrition Plan – We are working in coordination with other agencies (MDCH, MDARD, LARA, etc.) on the development of The Nutrition Plan. FYI – Marla Moss is now the Agency Rep on this newly developed team.

Please look at what has been compiled from Activity Log for MDE in relation to involvement to this point at SEOC:

NOON Deadline for modifications/additions/suggestions:

MDE:

- Received approval of request to waive potable water requirement in National School Lunch Act for Flint Community Schools
- Food preparation is being done at sites with safe water
- Flint Community Schools indicates they are in possession of stockpiles of water
- Reached out to Genesee Intermediate School District (GISD) about other water related issues for other local districts and Public School Academies (PSA)
- Flint Community Schools indicates drinking fountains have been turned "off"
- United States Department of Agriculture, Midwest Regional Office asking for updates on Flint water situation. From USDA food preparation standpoint, there are no issues
- Request to GISD for listing of their communication regarding Flint water situation
- MDE contacted all Child Nutrition Programs (CNP) to solicit response to Flint water situation
- MDE updating spreadsheets from CNP with responses
- MDE shared spreadsheet with DEQ. Listing came from Education Entity Master (EEM) and was filtered for "Open" entities
- MDE leadership has been briefed. Dr. Eden Wells presented at January 12, 2016 State Board of Education meeting
- MDE is working with Office of Great Start (OGS) in working with Family and Friends Child Care providers (less than 4 children) regarding Flint water situation
- MDE and Civil Rights working on distribution of EPA document (English and Spanish) through school buildings, including students and staff members

Tom, who is best person at CEPI that can help us get the pupil count of buildings in Flint?

THe real question is for those that are on Flint water, but we should provide a count for any building in Flint, Mt. Morris, and Burton addresses.

Do you have any info on staff by building? REP?

Louis

MSP-EOC-MDEDUCTN

From: MSP-EOC-MDEDUCTN
Sent: Friday, January 15, 2016 11:08 AM
To: Alaniz, Aimee (MDE); Brewer-Walraven, Lisa (MDE); Broman, Susan (MDE); Burgess, Louis (MDE); Dixon, Janice (MDE); Doxie, Shulawn (MDE); Golzynski, Diane (MDE); Guerrant, Kyle (MDE); Houseman, Jennifer (MDE); Malnar, Jaime (MDE); Moss, Marla (MDE); Priest, Thomas (MDE); Walters, Kevin (MDE)
Subject: Immediate tasks for MDE (based on January 15 09:30 call)

MDE needs to complete the following tasks today:

1. A bulleted listing of items associated with MDE involvement at SEOC to date. This information will be sent to Richard Thelen (State email) and then forwarded to Captain for inclusion in document to Flint Mayor from Governor's Office.

NOTE: I (KW) have started this document as deadline is noon

Civil Rights and MDE has task of getting the following information:

2. Has MDE coordinated distribution of official EPA document to students today (Friday) via schools?
3. Does this include a Spanish version?

In talking with Civil Rights and Health Department, it was determined that IF schools have already printed off the EPA document to send home, move forward. IF NOT, hold off as we are working on getting 10,000 documents from EPA to distribute. Confirmation is required ASAP

4. We need (today) a count of students and staff, per location, for schools and child care providers in Flint.

5. Requesting that Shereen Tabrizi provide the following information on non-English speaking students in Flint:

    a) How many students?
    b) Where are the students located?
    c) What languages (by percentage or number) are required?

NOTE: I have mentioned a concern that Home School students/families and School of Choice students will be potentially left out of some information, should the focus solely be on school distribution methods. Home School numbers and locations will be very difficult to identify. The School of Choice issue may be attainable through MDE, via home residence zip code. There are potentially hundreds of Flint resident students that may be attending schools outside the City of Flint and, potentially, left out of some information as well.

SEOC Update: 1/14/16 16:00

- Reviewed assigned tactics (204)– MDE continues to have supportive role, no specific assigned tasks at this time (esp on development of Nutrition Plan).
- DEQ concern... right now fire stations are not accepting water samples... governor wants 8 collection teams. Working on it. More updates near future
- Positive feedback from citizens door to door (Human Services staff reported)
- Red Cross – standardizing water response teams
- Volunteer reception site is up and running today
- Teams have covered 2333 residences as of this briefing
- "Zero Water" may match purchased filters with donated ones
- State employee email coming soon (just approved)
- Protest occurred today at capitol
- Need to be aware that we are pushing all of these bottled water bottles into the local area... we need to set up a recycling program to deal with the bottles.
- Next briefing 1/15/16 @ 09:30

Subject: SEOC Briefing - 1/14/16 09:30

- FOR INFORMATION ONLY; NOT FOR RELEASE: DEQ is working on a definition of safe water for Flint. This is a politically sensitive topic and they are bringing in DEQ and EPA experts, they are also working close with the community to ensure that they handle this message correctly. From DEQ.
- National Guard is working to process the soldiers that have been assigned to support the crises. It appears that they will be used as long term "volunteers" to support the operation.
- Teams are out. What is a team? State police trying to ensure a common definition. 4? 10? Big PR issue. CPT Kelenske telling the mayor there are 30 teams.
- Drizzle in the forecast. Rain and 40 degrees tomorrow.
- MDARD has had their guidance for food establishments will be going out today. We can use the new info for our purposes.
- Media is still growing; All media referred to the JIC
- Michigan State Police are working on a message to all state employees.
- Still concern over a strong centralized message.
- Note for MDE staff: Marla Moss is MDE's nutrition program contact. Gloria Zunker leading the effort for state.
- "extra water in Flint:" The state has sufficient water resources to distribute. They will not take water that has been donated to Flint School District and re-distribute the water. If Flint School District wants to give away its donated water, they should coordinate directly with Genesee County officials.
- Next briefing at 16:00

Thank you,
Louis Burgess

Attached is a flyer that can be modified and distributed with the bags.

Also I talked to Gary Hicks at Republic. They service the Flint fire stations with trash dumpsters. It was reported to them on Monday that they are overflowing. They are happy to hear that Schupan is interesting in donating the bags and equipment because it may lessen the pressure on the dumpsters (I wouldn't be surprised if recycling dumpsters also begin to be placed at the fire stations as well).

What additional information do you need from me to help make this happen?

Subject: Fw: Water bottle recycling for Flint

Mel,
Nice to meet you by email. I'm Matt Flechter, Recycling Market Development Specilist working primarily on implementing the Governor's Recycling Plan of Action. Bryce asked me to forward this information to you with the goal of identifying steps to take to facilitate a partnership to set up a collection program for water bottles in Flint.

As you can see below Shupan Recycling is interesting in donating resources to help set up the collection infrastructure to help manage the used water bottles.

This morning Amcor, a Michigan based plastic product manufacturer active in supporting the development of successful recycling programs, offered financial support to expand the collection network to all water distribution centers.

Bryce spoke to Director Creagh this morning and he requested we work through next steps with you. Please let us know how we can help move this forward.

Matt Flechter

From: Roger Cargill <rcargill@schupan.com>
Sent: Tuesday, January 12, 2016 4:52:22 PM
To: Flechter, Matt (DEQ)
Subject: Water bottle recycling for Flint

Matt,

Here is our proposal:

Schupan Recycling would deliver two trailers to selected distribution centers. The distribution center staff would supply a recycling bag with each case of water given to a citizen. Each bag would have a flyer with instructions on how to recycle your water bottle and the expectation when the citizen returned for another case of water they would bring back a bag full of empties. Schupan Recycling will provide up to 70 cases of bags and the printed instruction guide.

Schupan Recycling would need the distribution staff to attach the guide to the bag with a stapler insuring proper delivery of the educational message and place the full bags in the trailer provided.

Schupan Recycling would also produce a press release announcing the services provided for DEQ and the City of Flint.

Hope this is what you need.

thanks

Roger J Cargill

Subject: FW: Prevail Water/ SWOT

Percy Jones Jr. is the CEO of Prevail Water Company in Atlanta, GA. Prevail provides clean water to people in emergencies. His company can provide clean water in homes based on tanking systems. He has worked with FEMA and Haiti during the earthquake. His system is an easier way to access water, compared to having bottles. He sent the attached information. I told him I would send it up for a response.

Hi Team,

Would someone mind reaching out to the below individual:

Citizen did a study via his company on Legionella disease and many other facets of testing/ studies surrounding this disease.

Would like to offer a study they have and help if needed. They are currently working with the Navy on this issue.

Cc: 'Charles Chervenka'
Subject: RE: Unexpected Help for the Flint Water Crisis?

Beautifully put Brother!
I am available anytime – this is an EMERGENCY!
I NEED to grab some tainted water and test it- before and after processing it.
We have dip strip testing kits to determine if the water does in fact have lead or other undesirable agents within immediately.
With the tainted water- it then goes directly to the EPA Certified Lab in Ohio, then with the results, (potability confirmed), we are free to install where ever deemed appropriate. We have the one location earmarked and ready to go—other than that we NEED HELP!
Thanks,
Joe Novitsky

Subject: Unexpected Help for the Flint Water Crisis?

Chris-
I suspect that you are overwhelmed with the Flint water crisis.

I am a Mich State Univ grad (Evans Scholar) living in California/Si Valley. I am in my local Rotary Club; Amy Krug, president of the Flint Rotary Club gave me your contact info.

My brother lives in Detroit, and designed a water purifier that is in use in California (Earthquake preparedness), in Nepal (earthquake relief), and in Kenya (purifying the water for the Maasai out on the Serengetti). The water purification machine is manufactured near Grand Rapids, and has passed the US EPA water quality tests, in addition to state level tests in California, in Michigan, in Oregon and in Minnesota.

We set up a "Go Fund Me" website, and have donors ready to buy them, so we can install them. We have one pastor at one church in Flint ready to receive the unit. He will use this unit to produce clean drinking water for his community.

I have asked my brother's company to 1) go through a rigorous and formal lab certification process, before any installation, 2) attempt to work with the local people "in charge", don't just go around them. That's why I am reaching out to you, and copying the two principals of the company on this thread. Joe lives near Detroit, and runs engineering. Charles lives near Grand Rapids, and runs manufacturing.

We can bring some Si Valley money + public donations to help the poorest of the poor, with a solution that could be installed broadly within a week. We view this as a similar effort to the private relief efforts we did for earthquake relief in Nepal, and for drought relief (forcing consumption of known contaminated water) in Kenya. In California, for the earthquake preparedness, we work with a public/private model, working through the fire departments, the city/county emergency managers, the city/Town managers, and private home/business owners (i.e. owners of the private water sources).

Please contact me, or forward this email to your person who is looking at solutions besides bottled water. The cost of that much bottled water, and the mountains of discarded bottles it produces, will both be staggering.

Regards,

Cell #

The following is a "strawman" plan. It is not a formally committed, agreed to, or a binding commitment. It represents the current thinking by the managers of Merlin Ecosolutions + friends of the company + private donors, as of Friday, January 15, 2016. We invite and welcome the comments of the Flint government officials, and invite them to observe this unique program, intended to offer a very low cost and highly reliable alternative to mass distribution of bottled water. Our thinking is that if it works, and works very well on the first couple of installations, then we scale the solution to communities where appropriate, and stop doing it when it no longer makes sense.

Company name/product info: Merlin Eco Solutions www.merlinecosolutions.com

Rough product description: 120V AC powered water purification system, derived from our portable solar powered unit.

- Flow rate: 0.6 gallon per minute output. Input restrictor used to manage the flow rate through the lead removing substrate.
- Additional purification methods: 0.5 micron mechanical filtration, followed by UV blast at 42k mV/cm**3/sec (2.8x WHO spec). EPA calls our output water "sterilized" suitable for surgical/operating room use.
- Base Price: $1,200/unit.
- Consumable lead filter lifetime/replacement cost: about 2,000 gallons (test strip cost about $0.50/test), @ 0.6 gpm that's a replacement about every 2.3 days – if run continuously, filling water storage tanks.
- So cost for 1M gallons of "sterilized" lead free water, is the $1,200 + 50 replacement filters ($10,000)= about $0.012/gallon or $0.003/liter. Bottled water, purchased at the pallet level, sells for about $0.50/liter. Bottled water cost will be some 170x more than manufacturing purified water out of the water in the municipal water supply right now. Let alone the storage costs, the transportation costs, the distribution costs, the labor costs of the National Guard troops, the additional costs of waste disposal of the trash mountains.

People served/unit: at 0.6gpm, that makes 864 gallons/24 hrs, or 3,283 liters/24 hrs.

- WHO requirements are 2 liters/person/day for drinking water, so each unit is good for some 1,641 people/day.
- WHO requirements for cooking water, washing up water, etc are 10 liters/person/day, so that works out to about 328 people/day/unit. This unit is sized for a community, overkill for one individual home.
- In California earthquake preparedness applications, we actually plan one unit for every 250 people. That means we don't have to monitor/run it 24/7. We also don't know who has stockpiled their own water, who is in living in Town when the emergency strikes, etc. It also means that we have excess capacity/redundancy in the overall system for a city, in case one unit fails, in case one community's source water disappears, etc.

Project Status:

1) Undersink/AC powered version already installed in Toledo, Ohio; used to take the algae out of the Lake Erie toxic bloom.
2) A pair of units for Flint lead removal have been built. These have pressure reducing flow restrictors on the input, to control the output flow rate down to 0.6 gpm off 80PSI municipal water line.

3) Flint water is being collected tomorrow, using EPA methods by a licensed and trained professional engineer, and transported down to a certified lab in Ohio. We should have the formal certified lab test results by middle of next week, for review by any water engineer/public or private person.
    a. Lab is also instructed to test/confirm that the chemicals that will be used to recoat the pipes with an insulating layer of oxidation, can themselves be filtered out of the input water, using a fresh $20 filter in this water purifier. So whenever Flint Water Company chooses to put the chemicals in the system to "re-line" the inside of the pipes through the entire distribution system, the only thing each system user will need to do is to change out the filter, one time (takes 1 minute), turn the water on and clean drinking water is again flowing out of the purification unit – until the time that Flint Muni Water says that the "flushing" is complete.
    b. Lab will use a sample of Flint tap water, mix in the chemicals to duplicate what is expected to be used to re-oxidize the pipes, and verify the purity of the output water.
    c. Of course, after the damage to credibility, many users of this machine might continue to keep it installed for their drinking and cooking water.

Proposed priority of installation (by our private donors): If other purchasers wish to install, they can choose to do this also.

1) The poorest of the poor. Work with churches, community centers.
2) Preschools and elementary schools, where the lead is most harmful.
3) Hospitals, and first responders.
    a. There is zero enthusiasm from private donors to pay for water purification machines for public governmental buildings in the region, as you might imagine.
    b. There is also zero enthusiasm from private donors to pay for water purification machines for individual homes or apartments.

Scalability/Water Purification Machine Distribution method:

1) Hire Flint veterans to do the install; pay them through an existing 501 c 3 set up to do such work in Michigan.
2) Manager will be a Flint native (friend of the company).
3) We'll use some kind of home/church/community center as a staging area, to physically receive the units, for the veterans to arrive at daily, to be trained, and they get paid at the end of each day, after the recipient signs off on the installation/verification/trained on test procedure (use the test strips, when they change color, replace the filter). Sign off by the recipient is also a liability waiver of future lawsuits for lead poisoning by us. We are trying to help clean up the mess, not be responsible for past mistakes by others.
4) From the Rotary Club in California, we'll also work with the Rotary Club in Flint.

Drinking Water Distribution Method:

1) Similar to what we do for earthquake preparedness in California, identify a suitable community based location as the water source, close enough for people to easily walk to.
2) Have individual people walk to the clean water place, fill up their containers, and carry them back home.

First Installation:

1) First site has already been identified (a church).
2) If all goes well (lab tests "pass", local Flint gov't doesn't get heavy handed and force a legal stop between private donations and a church), we can install the first system at that church next week, on Friday, January 22, 2016. We can observe how the community responds to this solution, and then decide to improve the process, scale it, or stop the effort.

We invite Genesee county officials, and Flint officials, to help "aim us", and to partner with us. We offer one alternative among many. It's worth trying. Keep trying your other solutions as well. It's how we do things in Silicon Valley: try several approaches, learn what works where, and apply as appropriate. Stop doing the things that don't yield productive results.

Additional references on the company, on our products, can be supplied. These include California fire chiefs, Maasai tribe chief, a medical/ER doctor, FEMA officials, a manager from International Medical Corp, etc. I don't know if anybody from US AID will go on record for us – yet, but we work with them, too. If you want my FEMA guys to work with your FEMA guys, or your fire chiefs to work with my fire chiefs, or my California or Ohio water testing lab guys to work with your water testing lab guys, we can do that too.

April /Mark

I would like to make a request of the state EOC.

Community members/residents with elevated lead results need immediate and direct follow up.

They are mailed an ambiguous lab report, which they are not trained to understand or interpret. The city also sends a letter using different measuring units than indicated on the MDEQ lab result.

I and my staff have talked with many residents and I try to screen the MDEQ results daily and follow up with the folks who have elevated levels. We don't have capacity to followup with all of them promptly.

They need immediate verbal or physical followed up along with the a mailed report to ensure water is not being consumed at that location.

Thanks Jim

How does this sound…

To get the facts about Legionella call 2-1-1, or go to Genesee County Health Department's website: gchd.us. Legionella information is located on the front page of the Health Department's website. You will find Legionella information in the Media Releases and Popular Pages columns on the front page.

Do we have an official Legionella graphic?

I hear you Hilda, I really do. Unfortunately we don't have staff to get that message out today, and I think for consistency, at this point, we need to stick with 211. Had we had a little more time to plan, that would have been possible. I think that is fine to post to Facebook, and I encourage you to do so. Please also refer people to 211.

Subject: RE: Phone Calls

If we spoon feed the media and public the information it will not be a problem. For example.

The Genesee County Health Department will be closed Friday, January 15 and Monday, January 18 in observance and honor of Martin Luther King Day.

To get the facts about Legionella go to Genesee County Health Department's website: gchd.us. Legionella information is located on the front page of the Health Department's website. You will find Legionella information in the Media Releases and Popular Pages columns on the front page.

Once again, I know this sounds mercenary, but we need to train people. If anything they need to learn our web address.

My concern with people being pushed to our website is that it is incredibly *un*-user friendly right now. If we had already made the switch to the new site I wouldn't be concerned.

Thanks,

Tamara

This may seem mercenary, but it really is marketing and serving the public at the same time. Please drive people to our website and spoon feed them the locations of the Legionella media releases and popular pages. I will post both on our Facebook account now. And if it is not too late April, share this information with your state counterparts. Thanks.

Subject: RE: Phone Calls

I just got a call from Jackie Scott. She confirmed that they are setting up a phone bank to answer lead and Legionella calls. They will answer calls from 8-5 through the weekend, but I got the impression that this is not a long term solution but rather a short term fix for us being closed for 4 days. She did not give me a number but said that 2-1-1 would be forwarding calls to the phone bank. I forwarded her the Legionella press release that we released today as well as the fact sheet that was on our site so that they weren't giving out any information that conflicted with our messages.

I also pointed out that there was a general lack of trust in water in general in the city so they should be prepared for that when taking calls.

Subject: RE: Phone Calls

I talked to Mary MacQueen at the State. She said that 211 is going to be directing all calls relating to lead and legionella to a state phone bank for the weekend (Friday – Monday). I don't know if that will continue past Monday.

Subject: Water Testing Kit and ESRI for Office

James,
I spoke with Mark about potentially using ESRI for Office to hook the water testing kit spreadsheets to our ArcGIS online database. He needs to speak with some people before deciding to move forward.

This solution would allow the data from the DEQ spreadsheets to appear on our maps.

If it is approved, I'll work with Jon from ESRI to setup a solution/training.

4719 bottles, labels, rubber bands are ready to be picked up by DTMB today. 3612(42 cases on three pallets), unlabeled, are at Filley Street warehouse. 1107(13 cases), labeled, 3612(121 sheets of 30) labels, and rubber bands are at the DEQ Lab loading dock. Please advise when these bottles will be picked up. **The Filley street warehouse will be closing around 4:00PM today.**

Just spoke with Scientific Specialties Representative. 1020(17 cases) to be shipped today to GCCard in Flint to Matt Persel. 10,200(170 cases) tentatively shipping out this Thursday, 01/14/16. 169 of those cases to be shipped to GCCard in Flint to Matt Persel, 1 of those cases to be shipped to DEQ Lab for Lot testing. All bottles (187 cases total) are the same lot per vendor. This will need to be confirmed on arrival at GCCard(per instructions to be sent shortly for review). Once the single case has been received and tested by the Lab, the Lab will print labels to be couriered to GCCard for this entire shipment.

Scientific Specialties Rep is checking on lead time for up to additional 30,000 Wide Mouth bottles from their manufacturer. Also checking on current stock and lead time on additional stock of the Narrow Mouth bottles.

Alternate Vendor - Environmental Express: We can ship 100 cases (72 per case) by Thursday of this week. We can probably ship another 150 cases by early-middle next week. We would be able to send the remaining 50 cases by the end of the month. In regards to availability going forward, this is a popular bottle so future inventory shouldn't be a problem. If our warehouse knows that this will become a recurring order, they will adjust their inventories to accommodate.

Alternate Vendor – VWR: Wide mouth containers are custom made (not available in stock) from C&G Containers mfgr in Louisiana. Lead time 5-7 days for them to package containers and lids and then another 4 days drop ship from C&G mfgr. We can request for them to be shipped sooner with additional charge.

To: Busch, Stephen (DEQ)
Cc: Innes, Jim (DEQ); Frisch, Marjorie (DEQ)
Subject: RE: Field Personnel

None of our project managers are in the Flint area today; however, Jim Innes and Marjorie Frisch both manage contaminated sites in Genesee County. For the purposes of the inquiry - Jim covers all Part 201 sites in the county, Part 213 (Leaking Underground Storage Tanks) sites north of I-69, and response to PEAS complaints; Marjorie covers all 213 sites south of I-69. Both are at times working at sites in Flint, but that work varies by both site location and the dates the field work is occurring.

There could also be a couple other project managers that may work temporarily in Flint if response to a PEAS complaint is necessary and Jim is on leave.

Let me know if you need any other info.

WRD-LDO doesn't have any field staff scheduled to be in the Flint area today. In general we do site inspections at permitted facilities and respond to complaints as needed in the area as part of our normal duties.

There are other field staff in our division (biologists in permits section and surface water quality assessment) that may do limited field work in the area, although I'm not aware of anything specific going on at this time. We would need to check with their respective sections to know for sure.

Thanks,

Subject: RE: Other Water filters for use

Any filter that is certified by the NSF (http://www.nsf.org/newsroom/statement-regarding-flint-water-system-lead-issue-and-to-certification-nsf) under standard 53 to effectively reduce lead would be acceptable within certain boundaries of contaminant levels. If lead water concentrations are very high the filter may not perform as expected.

Subject: SEOC Activation for response to I94 traffic incident

The State Emergency Operations Center (SEOC) has been partially activated as of 12:30p today. I am representing the DEQ at the SEOC. Please contact me at 517-336-2676 if you have any information pertinent to the incident or are in need of information. Mark Ducharme (DEQ) is providing assistance at the Kalamazoo County EOC. DEQ Kalamazoo district, laboratory and Lansing staff have been engaged and providing assistance as needed.

Incident status:
Unconfirmed media reports of 115 vehicles are involved in the accident. Kalamazoo County HazMat is on scene. The tanker containing formic acid which was on fire is now extinguished. An evacuation order which was enacted due to the hazmat fire has been lifted.

Information from Kalamazoo EOC:
Hazardous Materials under control, and the fire is out. One confirmed fatality and an unknown amount of injuries. The freeway has been evacuated. Vehicles are being towed by McDonalds Towing of Kalamazoo and will be towed to their facility on Interstate Parkway in Kalamazoo.

DRINKING WATER LEAD AND COPPER SAMPLING INSTRUCTIONS

Thank you for helping to monitor for lead and copper in your drinking water.

It is important that you follow these instructions so we obtain an accurate measurement of the lead and copper in your drinking water.

Do not open the bottle until instructed in step 3. Do not touch the inside of cap or bottle.

1. **The water in the house must not have been used for a minimum of six (6) hours prior to sampling.** The best times to sample are early morning or after returning from work. **Do not flush the sample tap before sample collection.**

2. Select a cold water faucet in the **KITCHEN** or **BATHROOM** that is commonly used for drinking and has been used within the last 24 hours. **No other faucets are acceptable for collection.** If the faucet is connected to a faucet mount filter, water softener, iron filter or reverse osmosis system, etc. the treatment device must be removed or bypassed.

When was the faucet last used before sampling? Date _____ TIME _____ AM/PM

Is there a faucet-mount filter? ☐ YES ☐ NO If YES, was it bypassed? ☐ YES ☐ NO

Is this faucet connected to a home treatment device such as a water softener, a reverse osmosis unit, an iron removal device OR is any kind of additive used in the home? ☐ YES ☐ NO

If YES, please describe: _____

If YES, was it bypassed? ☐ YES ☐ NO

3. Open sample bottle and place below the faucet and gently open the **COLD** water tap. If you have a single handle faucet, turn it fully to the **COLD** side. Fill the sample bottle to within an inch of the top with the "first draw" of **COLD** water.

4. Tightly cap the sample bottle

If any plumbing repairs or replacement has been done in the home since the previous sampling event, please note this information here:

If YES, please describe: _____

5. Fill out the collection information on the front, answer the questions below and sign the form.

6. Attach this form to the bottle and return it to either **Flint City Hall or the Flint Water Plant.**

7. Thank you again for your help. We will send you your individual results within 30 days of receiving them from the laboratory. A summary of information on this year's lead and copper monitoring will be printed in the annual water quality report that will be made available by July 1 of this year. Contact your water supply if you have questions.

If you have any questions contact:

City of Flint Water Plant 4500 N. Dort Hwy. Phone: 810-787-6537 ext. 3501

I have read the Drinking Water Lead and Copper Sampling Instructions and have taken a tap sample in accordance with these directions.

Critical Task: Assemble, coordinate, and monitor WRTs

OGCS/MSP Process:

1. Assign team leaders, team members, and routes to teams
2. Team Member check in
3. Conduct pre-deployment briefing to include team mission assignments, concept of operations, deployment locations, replenishment process, reporting process, and safety briefings (refer to OGCS_MSP WRT Volunteer Assembly Information V2.0_011816 for detailed information on volunteer processing at LEOC)
5. Provide training to new team members
6. Issue vest and badge to team members
7. Execute morning distribution assignment
8. Lunch served between 1230-1330
9. WRT OIC and Team Leaders midday brief
10. Execute afternoon distribution assignment
11. Conduct post-deployment debrief with team leaders and members
12. Collect vest and badge from team members

Sample Script for Team Members:

We're here to make sure you have all the resources you need. We have bottled water, a faucet and replacement filter, and a water test kit. Your water sample will assist in monitoring the lead and copper in the water system. Make sure to submit the water sample. The instructions are included here with the bottle, but make sure to submit within 14 days. If you need assistance or have other questions, you can call 211.

Execution Support:

Product Replenishment Process:

Team	Replenishment Trigger	Replenishment Location	Process
GCSO/MSP	100 Distribution Kits Remaining	Distribution Route: exact location determined by Team Leader	1. Contact warehouse to request replenishment truck 2. Coordinate replenishment location with warehouse 3. Exchange replenishment truck with empty truck
ARC	0 Distribution Kits Remaining	Clio Warehouse	Replenish ERV at warehouse

Warehouse

Tactics:

1. Load a minimum of 2 trucks in preparation for replenishment requests with product loads corresponding to Team Typing Matrix

Lunch

OGCS/MSP WRTs lunches will be provided by the ARC and coordinated by LEOC Logistics.

Reporting:

Tactics:

1. All WRTs will utilize ipads as the primary reporting method and the WRT Distribution Tracking Tool as a secondary method if ipads fail.

Distribution Kit	1000			1/16/16	2010

Execution:

Key Locations

Team	Assembly Area	Hours of Operation
GCSO/MSP	LEOC Genesee County Administration Building 1101 Beach St, Flint	0830-1600
ARC	ARC 1401 S Grand Traverse St, Flint	0730-1600
Warehouse	*4315 North Clio Road, Flint*	*0700-1900*

Critical Task: Assemble, coordinate, and monitor WRTs

GCSO/MSP Process:

1. Assign team leaders, team members, and routes to teams
2. Team Member check in
3. Conduct pre-deployment briefing to include team mission assignments, concept of operations, deployment locations, replenishment process, reporting process, and safety briefings (refer to GCSO_MSP_Volunteer Assembly Information_V1.0_011716 for detailed information on volunteer processing at LEOC)
5. Provide training to new team members
6. Issue vest and badge to team members
7. Execute morning distribution assignment
8. Lunch served between 1230-1330
9. WRT OIC and Team Leaders midday brief
10. Execute afternoon distribution assignment

11. Conduct post-deployment debrief with team leaders and members
7. Collect vest and badge from team members

Sample Script for Team Members:

We're here to make sure you have all the resources you need. We have bottled water, a faucet and replacement filter, and a water test kit. Your water sample will assist in monitoring the lead and copper in the water system. Make sure to submit the water sample. GOVERNOR RICK SNYDER'S 2016 STATE OF THE STATE ADDRESS

Ending the Flint Water crisis

IMMEDIATE ACTIONS

The governor has pledged the full commitment of the state to help heal Flint. Any resource available will be drawn on. To date, more than 21,000 homes in Flint have been visited to provide clean water resources. A new $22 million dollar state supplemental spending bill will fund additional bottled water, faucet filters and lead-testing kits for Flint households. The funding will also provide wraparound services, such as diagnostic testing, nurse visits and environmental assessments, as well as access to child and adolescent health centers. Funding also will help the city alleviate the need for water shutoffs, and old fixtures will be replaced in schools, daycares and hospitals.

LONG-TERM ACTIONS

The Governor's annual budget proposal, slated this year for Feb. 10, will contain specific recommendations on long-term funding and action items that will support the residents of Flint as they recover from this crisis. Ongoing needs to be addressed include special education, long-term monitoring and health care for children with high lead levels, and studies to identify water infrastructure and service lines in need of replacement.

State funding will be a large part of the solution to Flint's water crisis. Further support and recommendations will come from the Flint Water Interagency Coordinating Committee. This panel will consist of water experts, public health professionals and infrastructure experts, and Flint community members. It will analyze any long-term effects and make recommendations as to what resources are needed.

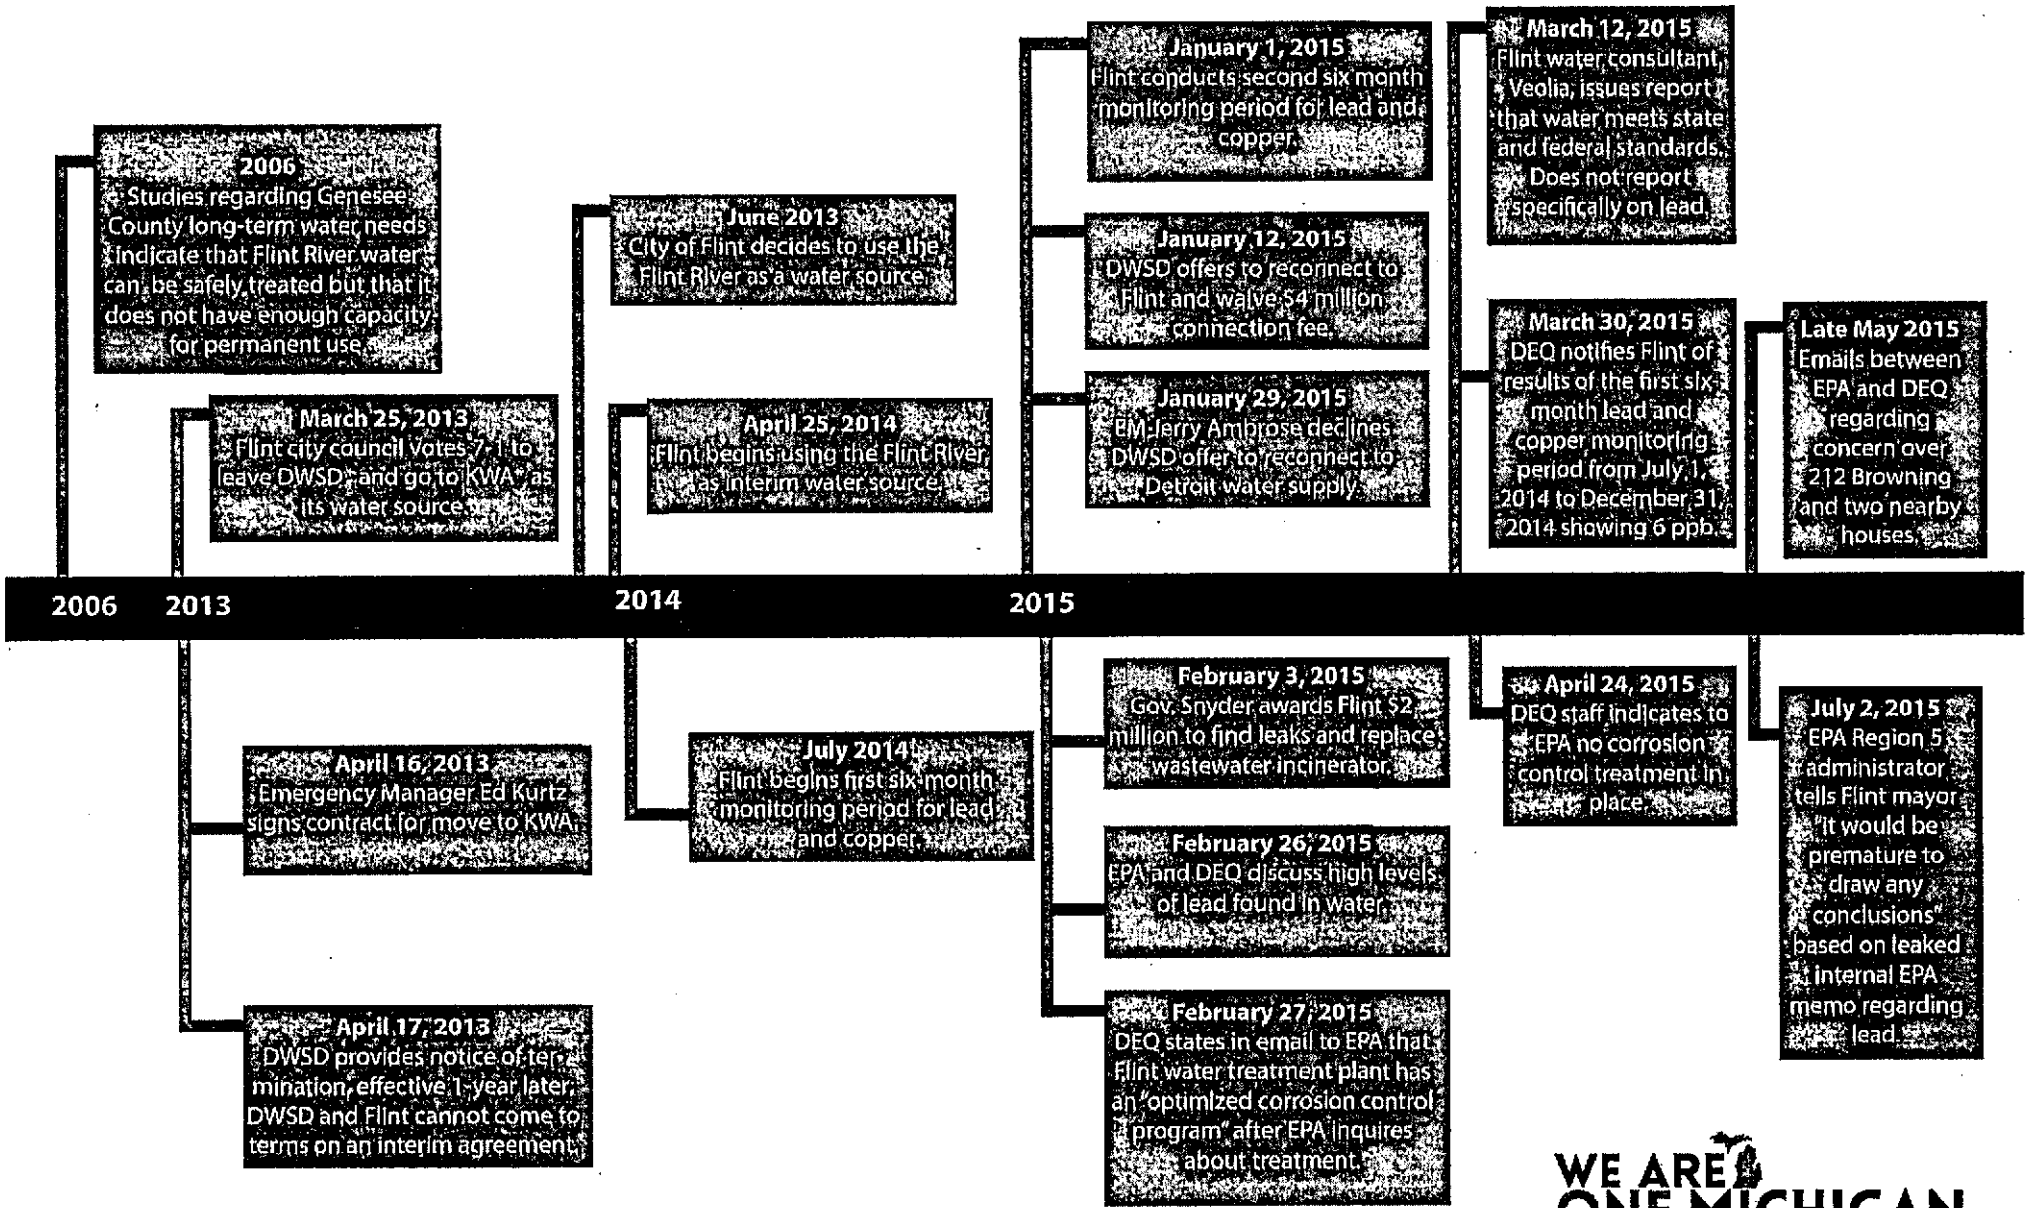
ENSURING THIS NEVER HAPPENS AGAIN

The legislature is being asked to immediately pass legislation to fund projects related to improving and upgrading water infrastructure, not just in Flint but any city with aging infrastructure. From replacing lead pipes to purchasing cutting-edge filtration systems, there can be no excuse for government failing at such a basic function. When Michiganders turn on the tap, they deserve clean, clear, safe water. It is that simple.

Gov. Snyder is also convening a commission on 21st century infrastructure, composed of the best independent experts, community leaders, and local and state officials to study Michigan's infrastructure needs, threats, opportunities and costs. The task force will be charged with recommending action items and investments to protect our health and well-being. Top priorities will include: water and sewer infrastructure, energy and electrical grids, broadband modernization, and upgrading the aging Soo Locks, where even a 30-day outage would result in economic losses of $160 million dollars. The task force will provide a comprehensive update to the governor and the public, laying the groundwork for state and municipal actions to take place.

FLINT WATER TIMELINE

- KEY DATES -



** DWSD: Detroit Water and Sewage Department*
** KWA: Karengodi Water Authority*

WE ARE ONE MICHIGAN

FLINT WATER TIMELINE

- TIMELINE CONTINUED -

July 21, 2015
EPA and DEQ discuss the requirement for corrosion control optimization of drinking water from Flint River.

July 22, 2015
Governor Snyder's Chief of Staff, Dennis Muchmore, emails DHHS director, Nick Lyon, stating community concerns about lead in the water. Muchmore asks about Flint water test results, blood testing and State's response.

September 2, 2015
Professor Edwards communicates that the corrosiveness of Flint water is causing lead to leach into residents' water through pipes.

Early September 2015
DEQ disputes Professor Edwards' test results and conclusions about corrosion and lead leaching.

September 28, 2015
DEQ and DHHS Directors provide briefing to Gov. Snyder on potential scope and magnitude of the issue. DHHS continues to review blood lead level data.

October 19, 2015
DEQ Director Dan Wyant states, *"Staff made a mistake while working with the City of Flint. Simply stated, staff employed a federal (corrosion control) protocol they believed was appropriate and it was not."*

November 3, 2015
The EPA indicates differing possible interpretations of the Lead and Copper Rule with respect to how the LCR's optimal corrosion control treatment procedures apply to this situation (new water source/ new water treatment).

January 4, 2016
Genesee County Commission votes to declare emergency.

January 5, 2016
Gov. Snyder declares emergency for Genesee County, activating the State Emergency Operations Center.

January 9, 2016
MSP Emergency Management Division announces water resource sites established in Flint with bottled water, filters and testing kits.

January 8, 2016
Gov. Snyder and Flint Mayor Weaver meet to discuss collaboration.

2015 **2016**

August 17, 2015
Based on July results showing lead levels at 11 ppb from the second six-month testing period from January 1, 2015 to June 30, 2015, DEQ instructs Flint to optimize corrosion control.

August 23, 2015
Virgina Tech researcher Prof. Marc Edwards raises concerns about corrosion and lead. Notifies DEQ that he will be studying Flint's water quality issues.

August 28, 2015
Concerned Pastors announce water filter giveaway in Flint.

October 1, 2015
DHHS confirms lead problem. City of Flint urges residents to not drink water.

October 2, 2015
Governor releases 10-point plan to address water system, $1 million for water filters and anti-corrosion treatment.

October 8, 2015
Governor announces plan to reconnect to Detroit water and Flint develops the plan.

October 15, 2015
Gov. Snyder signs supplemental appropriation with $9.35 million to assist Flint in reconnecting to DWSD. Mott Foundation contributed $4 million and Flint $2 million.

October 16, 2015
City of Flint reconnects with DWSD.

December 9, 2015
Flint begins to add additional corrosion controls.

December 14, 2015
City of Flint declares emergency.

December 29, 2015
Gov. Snyder takes action on initial findings from Flint Water Task Force. DEQ Director Wyant and Communications Director Brad Wurfel resign.

December 30, 2015
Gov. Snyder taps DNR Director Keith Creagh to guide DEQ through leadership transition.

January 11, 2016
Gov. Snyder signs Executive Order to create the Flint Water Interagency Coordinating Committee to work on long-term solutions to the Flint water situation.

January 12, 2016
Governor requests FEMA's assistance and activates Michigan National Guard to help with water resources distribution.

January 14, 2016
Governor requests Presidential declaration of major disaster and emergency and requests federal aid.

January 16, 2016
The President approves declaration of emergency and request for federal aid. The president denies request for a declaration of major disaster.

State of the State 2016: Immediate action for the challenges of today, opportunities for tomorrow

Snyder to Flint: 'I will fix it'

LANSING, Mich. – Gov. Rick Snyder devoted his sixth State of the State address to the immediate challenges facing Michigan today and actions being taken to solve them – foremost among them, the crisis in Flint, the condition of Detroit Public Schools, and Michigan's economic future.

"To the people of Flint, I will fix this. You did not create this crisis and you do not deserve this," Snyder said. "I want to tell you that you are not alone. The State of Michigan stands with you. I will spare no resource to effectively and permanently solve this crisis and ensure you have the quality of life you deserve."

The governor explained the immediate actions being taken to help Flint residents, including daily door-to-door distribution of bottled water, water filters, filter replacements and water testing kits. More than 21,000 homes have been visited this month by volunteers and emergency responders. In addition, he detailed budget recommendations to keep Flint on Detroit's water system through the end of 2016, to replace water supply pipes and fixtures in Flint schools, and to fund specialized staff locally in Flint for follow-up care for affected residents.

An official request to the Legislature to address immediate, short-term funding to ensure everyone in Flint has clean water will cover costs such as:

- Replacement of fixtures in schools, daycares and hospitals;
- Treatment of children with high lead levels, including diagnostic testing, nurse visits and environmental assessments;
- Child and adolescent health centers and additional support for children's health care access;
- An infrastructure integrity study for pipes and connections, using outside experts;
- Providing aid to the city for utilities.

Long-term health monitoring for children exposed to the water and potential replacement of water infrastructure and service lines will be addressed through the governor's traditional budget recommendation, which will be shared on Feb. 10.

The governor also talked openly about fixing the problems in state government that led to this crisis.

"Apologies are not enough. My immediate concern is with healing Flint and ensuring all residents there have clean water. But I will also work to address the breakdown in state government that led to this crisis so that it never happens again. You have my word that we will fix this, and everyone who works for state government must know - any situation like this must come to my attention immediately. No delays, no excuses. We are accountable."

The Flint water crisis is an extreme example of how infrastructure replacement is desperately needed. But Flint is not the only municipality that will need to have water transmission pipes and other components of underground systems upgraded.

"Our state faces very real challenges at this point. We have deteriorating infrastructure – infrastructure we don't see every day like we do with roads. Many cities have aging water systems and pipes that need to be upgraded. Flint has been the catalyst for this, but it isn't just Flint and it isn't just Michigan. This is a national problem, and we are going to have Michigan solutions."

Gov. Snyder is calling for local and state officials as well as independent experts to work together on long-term solutions to infrastructure challenges. Top priorities include: water infrastructure, energy and electrical grids, broadband support, and upgrading the Soo Locks. A task force will be appointed to examine these issues and make recommendations for action.

The crisis in Flint is a tragic reminder that Michigan cannot truly be strong when Michiganders are suffering. This is a statewide challenge, and it isn't the only one. In 2016 the most pressing education issue is restructuring the Detroit Public School system.

Detroit schools are failing at the most basic fundamentals of education: teaching children. Gov. Snyder will continue working with the Legislature to reform the entire structure of DPS, so that not only can current students achieve more and have a better chance for future success, but measures will be put in place to ensure a complete failure to educate schoolchildren never again happens in a Michigan district. The district's debt must be restructured so that the $1,100 per-student spent on debt service can be spent on classroom resources.

Flint Water Response Team Plan for Wednesday, 01.20.16_V2.0_FINAL

Changes are highlighted in red

Key

WRT	Water Response Team
OIC	Officer In Charge
ARC	American Red Cross
OGCS	Office of Genesee County Sheriff
HH	Household
LEOC	Local Emergency Operations Center
NG	National Guard

Key Leaders

WRT OIC	Lt. Amy Dehner	
ARC OIC	Robert Gaskill-Clemons	

Plan

Agency	Team Types	Mission	Priority Distribution Areas
MSP/NG	9 Teams	5400 HH	Target Areas 10-18
ARC	10 Type V	1200 HH	Target Areas 1-9

Resource Status

Team Type & Quantity	**Type: N/A Quantity: 9**				
Resource	**Minimum**	**Confirmed**	**Notes**	**Date**	**Time**
Team Leader	9	9		1/19/16	2004
16ft box truck	9	9		1/19/16	2004
Truck Driver	9	9		1/19/16	2004
Team Member	95	95		1/19/16	2004
Team Transport Vehicle for 6-9 Team Members	8	8		1/19/16	2004

16ft box truck	0	0		1/19/16	2004
Truck Driver	0	0		1/19/16	2004
Team Member	30-60	30		1/19/16	2004
Team Transport Vehicle for 2-4 Team Members	10	10		1/19/16	2004
Team Transport Vehicle Driver	10	10		1/19/16	2004
Patrol Car	0	0		1/19/16	2004
iPads	10-20	10		1/19/16	2004
Hand Warmers	60	382		1/19/16	2004
Distribution Kit	100	1200		1/19/16	2004

Execution:

Key Locations

Team	Assembly Area	Hours of Operation
OGCS/MSP	LEOC Genesee County Administration Building	0830-1600

	1101 Beach St, Flint	
ARC	ARC 1401 S Grand Traverse St, Flint	0730-1600
Warehouse	4315 North Clio Road, Flint	0700-1900

Critical Task: Assemble, coordinate, and monitor WRTs

OGCS/MSP Process:

1. Assign team leaders, team members, and routes to teams
2. Team Member check in
3. Conduct pre-deployment briefing to include team mission assignments, concept of operations, deployment locations, replenishment process, reporting process, and safety briefings (refer to OGCS_MSP WRT Volunteer Assembly Information V2.0_011816 for detailed information on volunteer processing at LEOC)
5. Provide training to new team members
6. Issue vest and badge to team members
7. Execute morning distribution assignment
8. Lunch served between 1230-1330
9. WRT OIC and Team Leaders midday brief
10. Execute afternoon distribution assignment
11. Conduct post-deployment debrief with team leaders and members
12. Collect vest and badge from team members

Sample Script for Team Members:

We're here to make sure you have all the resources you need. We have bottled water, a faucet and replacement filter, and a water test kit. Your water sample will assist in monitoring the lead and copper in the water system. Make sure to submit the water sample. The instructions are included here with the bottle, but make sure to submit within 14 days. If you need assistance or have other questions, you can call 211.

Execution Support:

Product Replenishment Process:

Team	Replenishment Trigger	Replenishment Location	Process
GCSO/MSP	0 Distribution Kits Remaining	Distribution Route: exact location determined by Team Leader	1. Contact warehouse to request replenishment truck 2. Coordinate replenishment location with warehouse 3. Exchange replenishment truck with empty truck
ARC	0 Distribution Kits Remaining	Clio Warehouse	Replenish ERV at warehouse

Warehouse

Tactics:

1. Load a minimum of 2 trucks in preparation for replenishment requests with product loads corresponding to Team Typing Matrix

Lunch

OGCS/MSP WRTs lunches will be provided by the ARC and coordinated by LEOC Logistics.

Reporting:

Tactics:

1. All WRTs will utilize ipads as the primary reporting method and the WRT Distribution Tracking Tool as a secondary method if ipads fail.

Water Response Team: Concept of Operations and Support V2.0_011816

Mission: Distribute filters and additional resources to all households within the impacted area

Concept of Operations and Support

1. Planning & Prioritization
    a. Plan Components
        i. Team Type: Mission, Resources (example: Vehicles, Team Members, Product)
        ii. Priority: Priority locations for distribution within the impact area
            1. Priority locations are determined based on 3 projections: lead concentration, locations of vulnerable populations, and previous distribution locations
    b. Accountable: SEOC Recovery Branch Director
    c. Approval: State EM Director
2. Resource Support
    a. Resource Components
        i. Vehicles
        ii. Product
        iii. Personnel
        iv. Team Support (example: lunch, rain ponchos)
    b. Accountable: SEOC Logistics Section Chief
    c. Responsible: SEOC Logistics, SEOC Warehouse, American Red Cross Volunteer Resource Center
3. Execution
    a. Water Resource Team Daily Distribution
    b. Accountable: Office Genesee County Sheriff (OGCS)/Michigan State Police (MSP)
    c. Responsible: Water Response Team Officer In Charge (OIC), American Red Cross (ARC) OIC
4. Execution Support
    a. Team Replenishment
    b. Accountable: SEOC Logistics Section Chief
    c. Responsible: SEOC Warehouse
5. Reporting
    a. Distribution Reporting
    b. Accountable: Water Response Team OIC
    c. Responsible: All Water Response Teams

The below quantities are planning factors and will be continually refined based on data from *WRT feedback*

Team Typing

Type	Mission	Truck	Team Leader	Team Member	Team Transport Vehicle	Team Transport Driver	Patrol Car	iPad	Distribution Kit
Type I	500 HH	1 – 26' - 24' Box	1	10-20	1+	1+	1-2	1-2	500
Type II	400 HH	1 - 20' 18' Box	1	8-16	1+	1+	1-2	1-2	400
Type III	300 HH	1 16' Box	1	6-9	1+	1+	1-2	1-2	300
Type IV	200 HH	1 14' Box	1	4-8	1+	1+	1-2	1-2	200
Type V	100 HH	1 ARC ERV*	1	3-6	1+	1+	0	1-2	85**

* American Red Cross Emergency Response Vehicle
**Replenishment required to achieve mission

Distribution Kit per Household

Door Hanger	1
Water, case	1
Filter*	1
Test Kit	1
Replacement Filters	1

*If filter doesn't fit then distribute

Pitcher*	1

Flint Water Response Team Plan for Tuesday, 01.19.16_V2.0_FINAL

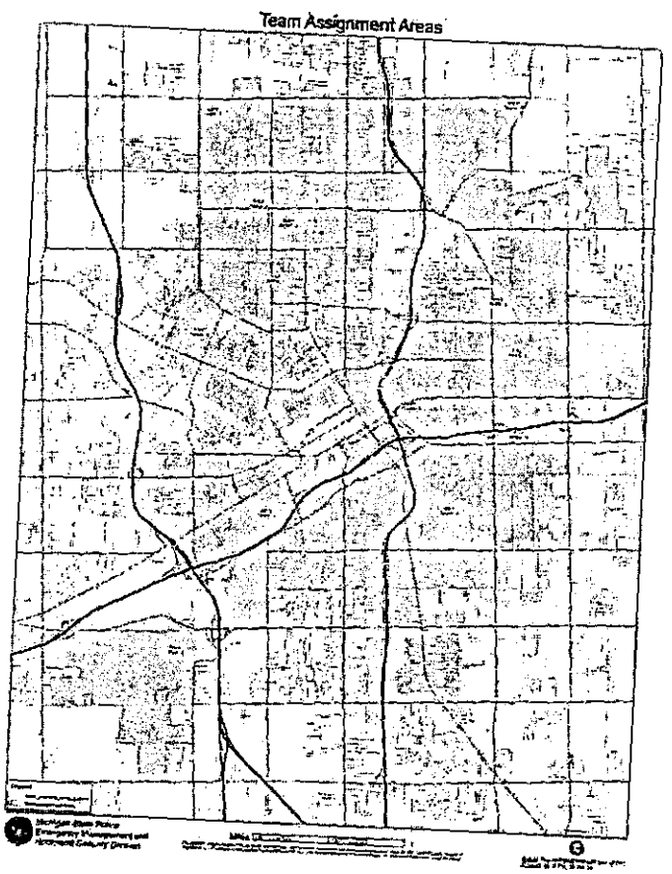
Priority Distribution Areas



Kettering University

1700 University Avenue • Flint, Michigan 48504-6214

Monday, January 18, 2016

To: The Kettering Community of Parents of our Students and our Alumni

Subject: Kettering Campus Water Update

I know that you value the excellence of the education we provide, but I expect as alumni or parents of students currently enrolled at our great University are concerned about the barrage of news about Flint's water supply. I am a proud parent of a Kettering student, and my family and I reside in Flint, so I understand deeply and very personally how you might be feeling about the situation as reported in the media.

Last week, I sent a detailed Kettering Water Update letter to our campus and to our students. Because I know (from direct experience!) that students may not always communicate promptly with their parents on even important issues, I thought I would take a moment to update you and our alumni directly on this issue, because I know it is a subject of concern.

Unfortunately, as is often the case in public crises, a great deal of misinformation about the water supply in Flint is being reported as fact. Just as distressingly, though, a great deal of important information that we do have about the situation is also *not* being reported.

Kettering campus water is safe, and our faculty, staff, students, and campus residents are **not** being exposed to contaminated water on campus. We are, and have been even before the current crisis emerged, committed to ongoing testing of our water to ensure the safety of the campus water supply. Moreover, the entire water supply of Flint has not been contaminated with lead; although some sections of the city have experienced problems, some severe, other sections have not.

All of us deplore that any single person has been exposed to unsafe levels of lead in the water; however, many, many people living in Flint have not been exposed to water containing elevated levels of lead in their residences or places of business. To date:

- Roughly 2% of all individuals tested in Flint have shown elevated blood lead levels.[1]
- Twenty-three (23) children younger than age six tested in Flint show elevated blood levels of lead.[2]
    - Children under the age of 5-6 are the most vulnerable population with respect to the long-term health effects of lead; in the U.S., 535,000 children under the age of 5 have elevated blood lead levels high enough to damage their health.[3]
- A total of 43 of 2182 of people tested in Flint show elevated blood levels of lead.[4]

I also want to clarify that *the water from the Flint River that was used as the city's water source from April 2014 through October 2015 was not contaminated with lead.* The contamination, where it occurred, was due primarily to interactions between treated river water and lead supply

[1] http://www.michigan.gov/documents/deq/Flint_Blood_Testing_Report_December_23_509464_7.pdf
[2] http://www.mlive.com/lansing-news/index.ssf/2016/01/43_flint_residents_identified.html
[3] http://www.cdc.gov/nceh/lead/infographic.htm
[4] ibid.

lines in the distribution system, particularly in lead lines connecting individual houses to local water mains. This is not a global problem with the water, but a problem with how that water - after treatment - interacted with some pipes and other elements of the city's distribution system. This interaction was often (considerably) different - even house-by-house on a single block.

In this letter I want to outline for you what we know about the nature of the contamination of the Flint system, how the university has responded to it, what we have done and are doing on an ongoing basis to ensure the integrity and safety of drinking water on the campus, and how we are working to ensure that those in the campus community who live off-campus in private housing have access to appropriate information, tests, and filters to ensure and monitor the safety of their private supplies.

Because I want to document what I write, I am also including footnotes that will lead you, if you are interested, to the sources of my information, something I learned to do as a faculty member and still highly value. We are committed to deploying every resource at our disposal to continue to ensure the safety of our entire campus community and our visitors. We value your input, and I hope that as members of the Kettering Community and of this great University that the information presented in this letter is helpful to you. If you have questions, comments, or thoughts on this issue we welcome you to send them to us at water@kettering.edu.

Introduction

Inflated lead levels have been detected in the water supply in a number of areas in the city of Flint, and these have received significant medical, political, and media attention over the last three months. The State of Michigan officially declared a state of emergency in Flint on January 6, 2016,[5] and the Federal Government followed on January 16, 2016.[6] Federal, state and local officials have now engaged and are taking more aggressive corrective action to address this situation and the public health crisis that has resulted from it. Proudly, many in the Kettering Community have taken a very active role in helping those families and children in Flint impacted by this health crisis since its beginning last year.

The levels of lead found in some areas of Flint are gravely upsetting, but I want again to stress that the problem of lead contamination in public and private drinking water supplies is not present in all of Flint. Unfortunately, this distinction has been absent from much of the reporting on this subject in the media. Reports often imply that the water was tainted at the source (i.e. the Flint River), or that contamination of the water is uniform across the entire distribution system and that every house and business has been equally affected.

I also think it important for us to recognize that this problem is widespread and in fact is not isolated to Flint.[7] For example, I am sad to report, drinking water supply contamination, in some cases at levels far worse than have been found in Flint, has been found in Washington D.C., Seattle, Baltimore, Philadelphia, and Los Angeles among other cities and areas of the country.[8] In Michigan, elevated blood-lead levels have been found in an even higher percentage of children

[7] http://www.cdc.gov/nceh/lead/leadinwater/

[8] ibid., http://www.cdc.gov/mmwr/preview/mmwrhtml/mm5312a6.htm, http://www.washingtonpost.com/wp-dyn/content/article/2009/08/03/AR2009080303003.html, and http://www.yaleseas.com/watersymposium/pdfs/EdwardsLeadPaper.pdf

than Flint is experiencing in sections of Jackson, Detroit, Grand Rapids, Saginaw, Holland, and a number of other cities.[9]

The Nature of the Problem

First, the nature and cause of the contamination are reasonably well understood at this point. In brief:

- Historically, the Flint water system used and distributed treated water from Detroit Water Authority. It did so until April 2014, when it switched to treating water from the Flint River in an existing Flint water treatment plant.
- The "raw" river water to which the city switched in April 2014 was not contaminated with lead.
- The water within *some* sections of the distribution network was, however, contaminated *after* the water left the treatment plant by the leaching of metals such as lead, iron, and copper from lead service lines and lines containing lead solder.

After the switch to river water, the City failed to treat the water for corrosivity by managing its chemistry,[10] which lead to the erosion (and release) of lead-bearing pipe scale in supply lines[11] and lead/copper galvanic corrosion of lead solder and lead copper joints in the distribution system.[12] Because raw water quality varies across the US, federal law requires all municipal water systems to have a corrosion control plan to address this possibility; this regulation is known as the Lead and Copper Rule.[13] Flint unfortunately did not have such a plan in place when it switched the water source to the River.

Here I want to stress that the lack of corrosion control did not, in and of itself, make the water unsafe. What it did do, however, is increase the potential for the water to react chemically with certain types of plumbing systems, and in doing so leach lead and other metals (if they were present) from those systems.

And if this isn't enough complexity, the City (out of what I'm sure were benign motives) used a relatively high level of chlorine to treat the river water to prevent bacterial growth in the supply. The unanticipated consequence of this choice, combined with a lack of activated charcoal filtration in the treatment process, led to the subsequent production of elevated levels of trihalomethanes (which are disinfection by-products of water chlorination) in the water, but these were present primarily in areas of the system where the water pooled or moved through the system slowly.

In October of last year, Flint switched its water source back to Detroit Water Authority. It took approximately 3-4 weeks for the Detroit source water to replace fully all of the water in the distribution system. In December, Flint also began introducing additional corrosion control

[9] http://www.crainsdetroit.com/article/20151210/NEWS/151219980/interactive-map-places-with-higher-lead-rates-than-flint

[10] Specifically the chloride-to-sulfate mass ratio in the treated water, which can be influenced by salt entering the source river from runoff or changes in the way that organics are removed in the treatment process. This is typically adjusted by adding lime or orthophosphates in the treatment process, see http://www.waterrf.org/publicreportlibrary/4088.pdf

additives to the water supply.[14] It did this expecting that the addition of these additives will, over time, help to rebuild the protective scale on the inside of the parts of the distribution system where it has been damaged.

Not All Areas of Flint were Impacted Equally

The specific mechanisms that gave rise to the contamination of the system mean that **not all areas of the system were equally impacted.** Portions of the system that do not contain lead service lines or lead solder were not as greatly impacted as those that do. Older parts of the system, especially sections built in the 1940's through the 1960's[15] that have not been upgraded since their construction are disproportionately vulnerable.[16] Other areas are far less so.

As a consequence, **the presence of lead contamination in the water supply was not uniform across the entire municipal water system, and not all areas of the city or all resident supplies were equally affected by it.** [17]

- The amount of lead that leached into a given part of the system depended upon a variety of factors, including the age of the system in the area, the specifics of its construction (e.g. are lead service lines present), and the time that water typically spends in that part of the system between treatment and use.
    - The levels of lead contamination measured in the water drawn from a particular source point depends upon the characteristics of the infrastructure through which the water passed, and how long it took to do so. **This is why water drawn in some houses on a single block might show measurable lead contamination, while others did not.**[18]
- For the same reason, as I noted earlier, only a percentage of Flint residents have been exposed to water containing elevated levels of lead in their residences or places of business.[19]

Kettering's Campus Water Supply and Our Approach to Ensuring its Safety

The municipal water infrastructure that supplies Kettering is relatively modern, the flow-rates of water through the system are high, and we do not have lead-copper transitions in the main supply lines, as do many residences in some areas of the city. All of these factors reduce the chance of contamination in our supply. Even so, the University has taken a number of proactive steps to ensure that the campus drinking and cooking water supplies are free from contamination, a number of which have been described in previous communications to the campus on this issue. These include:

[14] https://www.cityofflint.com/2016/01/10/flint-city-leaders-county-state-officials-announce-relief-effort-expansion/
[15] In the early part of the last century, many municipal codes *required* the use of lead pipes when connecting homes and businesses to municipal water mains but most codes banned the use of lead pipes by the early 1970's. Chicago, for example, continued to require them as recently as 1986, see: *EPA warns modernizing water system may boost levels of lead*, Chicago Tribune, September 25, 2013. Some major U.S. cities still have 100% piping bringing water from the utilities to homes and businesses, see: https://www.safeplumbing.org/health-safety/lead-in-plumbing.
[16] http://nepis.epa.gov/Exe/ZyPDF.cgi?Dockey=20001R4V.txt
[17] For an example see: http://www.michigan.gov/documents/deq/Copy_of_deq-fw-Flint-Home-Owner-Data-Sept-3-thru_Nov-5-15_505529_7_505579_7.pdf
[18] ibid.
[19] ibid.

- Since early 2015 (after the switch to river water but before lead contamination was suspected), the University has been engaged in recurring testing of all drinking and food service water distribution points on campus using an independent, certified laboratory (Brighton Analytical, LLC). We will continue to test all drinking and food service water distribution points (and there are almost 100 of these) indefinitely.
- We also similarly test incoming water from our (six) Flint Municipal Water system input supply lines.
- All food service water source lines are flushed for a minimum of five minutes prior to use each morning, and only cold water is used, consistent with EPA guidelines.[20]
- We use NSF/ANSI 53 certified filters on all drinking water supplies on campus; these filters are certified to remove lead and trihalomethanes in addition to a wide variety of other contaminants and suspended solids. You may find details on the NSF/ANSI 53 certification standard at nsf.org and on the websites of manufacturers that produce filters conforming to this standard. There are 31 specific performance criteria that fall under Standard 53.
- All of our filters are maintained and replaced at the intervals recommended by their respective manufacturers.
- To be conservative, we shut off all water fountains on campus where the filters for that fountain were located at a significant physical distance from the fountain itself (usually because of space restrictions in the fountain cabinet).

  We did this as a precautionary measure, since it is possible for lead (if, for example lead solder was used in its supply line) to be produced through the interaction of water with plumbing in the supply line *after* it has been filtered *if* that water is allowed to sit undisturbed for a protracted time in the supply line (such as when a water fountain is used very rarely).

We do not test the water used in toilets, bathroom vanities, or showers, **but we do test the sources from which they draw water** (i.e. the input supply lines to campus). **Human skin does not absorb lead in water**, so bathing, washing, or showering is safe even using water containing lead over the EPA's action level.[21] [22] Adults may safely use unfiltered water for brushing their teeth.[23]

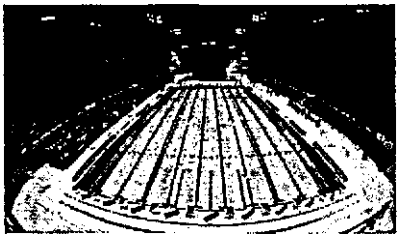
In addition, we continue to make improvements to our local system to improve convenience and ensure safety. One of the most visible of these is the replacement of many of our water fountains across campus with hydration stations; this project in fact began a number of years ago. All of our hydration stations are monitored and contain integral NSF/ANSI 53 water filtration systems.

How are Lead Levels in Water Specified and Interpreted?

The concentration of a metal, like lead, in water is often measured in parts per billion, usually denoted **ppb**. A concentration in water of 1 ppb represents one gram, or three one-hundredths of an ounce (3/100 ounce), of a substance in 260,000 *gallons* of water. One ppb is also three seconds

[20] EPA 810-F-93-001
[21] http://www.cdc.gov/nceh/lead/tips/water.htm
[22] http://www.michigan.gov/deq/0,4561,7-135-3313_3675_73946-372051--,00.html
[23] http://www.michigan.gov/documents/deq/2015-10-21_-_Lead_-_Flint_Water_FINAL_504265_7.pdf

out of 100 years. **Ten parts per billion (10 ppb) is the equivalent of approximately one teaspoon of water in an Olympic-sized swimming pool.**



The EPA has set an action level for lead in drinking water supplies at 15 ppb. In other words, if drinking water contains lead below this level, EPA regulations state that no action is required.[24]

For reference, the EPA permits faucets to be sold in the U.S. that leach 10 ppb or less of lead into water during a 19-day test.[25] Studies conducted by the EPA have found that the geometric mean of lead levels in drinking water systems in the US is 2.8 ppb.[26]

Results of Our Ongoing Testing

- As of the date of our last test series and over the past many months, we have tested the water drawn from the six input lines to campus a total of 15 times and all tests have resulted in a measured level of "ND" (for "None Detected"), with only three, single-test exceptions. In these three exceptions:
    - One detection was at 1 ppb, one was at 5 ppb, and the other was at 7 ppb. All of these are significantly lower than the EPA's allowable limit for lead of 15 ppb.[27]
    - These were single point-in-time detections; **later repeat testing of the same distribution points detected no lead.**
- **No lead has ever been detected in any water source used for food preparation.**
- As of the date of our last test series and over the past many months, all drinking water distribution points (e.g. water fountains) on campus have consistently tested "ND" (for "None Detected") for lead, with only six, single-test exceptions in well over one-hundred tests conducted. In these six exceptions:
    - All detections were at levels of less than 5 ppb (1,4,5,2,3 and 2 ppb respectively); all are significantly under the EPA's allowable action limit for lead of 15 ppb.[28]
    - These were single point-in-time detections; **later repeat testing of the same distribution points detected no lead.**

Access to Test Data

We make all results of these tests public. You may always find our latest test results along with other information related to the state of water in Flint at http://www.kettering.edu/water. We will continue to update the test reports on this site as we receive them.

[26] Levin R, Schock MR, Marcus AH. Exposure to lead in U.S. drinking water. In: *Proceedings of the 23rd Annual Conference on Trace Substances in Environmental Health.* Cincinnati, OH, US Environmental Protection Agency, 1989.
[27] http://www.cdc.gov/nceh/lead/tips/water.htm
[28] ibid.

On this same webpage, you will also find a link to PDF copies of the certified assay reports provided to us by our independent laboratory.

We have encouraged our students to speak with their parents or guardians about this issue, and to share with them all communications they receive from us. Copies of all of our communications to students on this matter may also always be found at http://www.kettering.edu/water.

More Information

If you have further concerns, I encourage you to read the Centers for Disease Control website on lead contamination of water at http://www.cdc.gov/nceh/lead/leadinwater/ and http://www.cdc.gov/nceh/lead/tips/water.htm as well as the citations in this letter. Additional information is also available on our website at http://www.kettering.edu/water.

If you have technical questions about the campus water supply, they may be directed to Nadine Thor, Director of Auxiliary Services, at nthor@kettering.edu. Questions from students or their families of a more general nature should be directed to Dean Betsy Homsher, Dean of Students, at bhomsher@kettering.edu.

We will of course continue to update the campus as this situation evolves.

Members of the Kettering Community that Live off Campus in Impacted Areas

We have encouraged our students, faculty and staff who live off campus within Flint city limits to use bottled water, to test their water (which also supports the city's data collection and analysis efforts), and to use appropriate water filtration in drinking water sources until notified otherwise by civil authorities.[29]

In the interim, **free bottles of water, water filters, replacement cartridges, and home water testing kits are widely available to all Flint residents.**[30] There are multiple distribution points for these around the city, and the University maintains a supply of filters in the Office of Student Life for students otherwise unable to obtain them.

Information on the city's distribution of all of these items to residents may be found at www.michigan.gov/deq. Students residing off campus needing assistance in acquiring water, test kits, and/or faucet filters have been encouraged to contact the Office of Student Life at (810) 762-9871.

A Note on Water Clarity

You may see pictures of bottles of rusty or cloudy water in articles on water safety; the same has been true of the reporting surrounding the water crisis in Flint.

The presence of suspended rust in water can turn it orange, red, brown or yellow. The presence of rust in water is not an indication of the presence of lead or other contaminants in the water, nor does it necessarily indicate that the water is unsafe to drink.[31] In water, lead is colorless, odorless, and tasteless,[32] and the presence of rust in water does not indicate the presence of lead, bacteria, or other substances.

[31] http://www.quincyma.gov/CityOfQuincy_Content/documents/RustyWaterFactSheet.pdf
[32] http://extension.psu.edu/natural-resources/water/drinking-water/water-testing/pollutants/lead-in-drinking-water

> *On its own, rust in water is not a sign of harmful bacteria or lead. In fact, the limits set by the Environmental Protection Agency (EPA) for iron in drinking water are based on aesthetics (taste, odor, color), not safety concerns.*[33]

Trapped air (in the form of small bubbles) in the water can also turn it cloudy or milky. Water pipelines are pressurized systems, so any air introduced into the system can remain trapped until the water leaves a faucet. This cloudiness is not indicator of water quality.

The NSF/ANSI 53 water filtration systems we use on campus for all drinking water remove suspended particulates including the iron that can discolor water (known as "turbidity reduction").

Legionella

It has very recently been reported[34] that there were an unusually high number of cases of Legionnaire's Disease seen in Genesee County in 2014-2015.[35] It has also been suggested in the media that this increase related in some way to the switch in the Flint water supply. Roughly half of the cases identified are in individuals who live outside of the city and the Flint municipal water service zone,[36] and a possible causal link between the two has absolutely not been established.

We have no evidence of any member of the University community having contracted Legionnaire's Disease.

Legionnaire's Disease is not contracted by drinking water containing *Legionella* nor is it transmitted between individuals. It is not contagious.

Legionnaire's Disease is a form of pneumonia caused by the bacteria *Legionella pneumophila*, and it is treatable with several classes of antibiotics.[37] It has an incubation period of two to ten days. *Legionella* do not survive in water above 140 °F (60 °C). *Legionella* are normally found in rivers, lakes, and streams,[38] and they are normally present in the water systems of large buildings and even in a percentage of residential water systems.[39]

Legionnaire's Disease is primarily contracted by heavy smokers, immunocompromised individuals, and individuals with chronic lung disease[40] through the aspiration of water or the inhalation of water mist contaminated with the *Legionella* bacteria.[41] Even after exposure to *Legionella* most people do not become sick.

Cooling towers for large buildings are frequently cited as potential breeding ground for *Legionella* bacteria if they are not regularly maintained and disinfected.[42] **The University has for many years routinely monitored and disinfected all cooling towers on campus.**

As part of a proactive effort, though, we have also begun ongoing and recurring testing of our water for the presence of *Legionella*. We will take appropriate action (which we will report) if elevated levels of the bacteria are detected in campus water supplies in the future. We will of

course publish the results of these tests on http://www.kettering.edu/water when they become available.

Federal Emergency Declaration

On January 16, 2016 and at the request of the state of Michigan, President Obama signed an emergency declaration the purpose of which is to make Federal aid available to the city in support of current filter and water distribution efforts to impacted persons in the city.[43] Substantively, this declaration simply mobilizes the Federal Emergency Management Agency (FEMA) to assist in these efforts and also makes certain federal funds available to the city for the purpose of supporting these activities. As stated in the order, it "is to provide water, water filters, water filter cartridges, water test kits, and other necessary related items for a period of no more than 90 days."[44]

A Kettering Professor (from the Beginning) and Our Students have been and will continue to be Part of the Solution

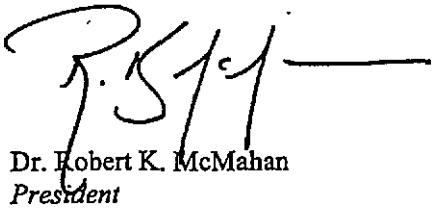
Last year, Kettering's Mechanical Engineering Professor Laura Sullivan was asked to co-chair Flint's Technical Water Advisory Board and was recently appointed by Mayor Karen Weaver to the Karegnondi Water Authority. This is important work, and through it she makes all of us in the greater Kettering family a key part of the solution. I want to take this opportunity to recognize her and to thank her for her service to Flint and the University.

Our students are some of the most creative in the world, and so we have been and are continuing to organize ways for our students, often in teams, to solve some of the challenging and unforeseen problems that have arisen in the distribution and installation of filters in affected areas of Flint. These efforts not only take advantage of the expertise and ingenuity of our students but they are also consistent with Kettering's ongoing commitment to Flint. We will make information on these efforts available on http://www.kettering.edu/water as it becomes available.

Please know that we are deploying every resource at our disposal to ensure the safety of our entire campus community and our visitors, and we will continue to work with federal, state, and local officials to help create long-term solutions to these problems. We value your input, and I hope that as valued members of the Kettering Community and of this great University that this letter has been helpful to you. If you have questions, comments, or thoughts on this issue or the University's response to it please send them to us at water@kettering.edu.

Thank you.

Warmest Regards,



Dr. Robert K. McMahan
President

Execution:

Key Locations

Team	Assembly Area	Hours of Operation
OGCS/MSP	LEOC Genesee County Administration Building	0830-1600

	1101 Beach St, Flint	
ARC	ARC 1401 S Grand Traverse St, Flint	0730-1600
Warehouse	4315 North Clio Road, Flint	0700-1900

Critical Task: Assemble, coordinate, and monitor WRTs

OGCS/MSP Process:

1. Assign team leaders, team members, and routes to teams
2. Team Member check in
3. Conduct pre-deployment briefing to include team mission assignments, concept of operations, deployment locations, replenishment process, reporting process, and safety briefings (refer to OGCS_MSP WRT Volunteer Assembly Information V2.0_011816 for detailed information on volunteer processing at LEOC)
5. Provide training to new team members
6. Issue vest and badge to team members
7. Execute morning distribution assignment
8. Lunch served between 1230-1330
9. WRT OIC and Team Leaders midday brief
10. Execute afternoon distribution assignment
11. Conduct post-deployment debrief with team leaders and members
12. Collect vest and badge from team members

Sample Script for Team Members:

We're here to make sure you have all the resources you need. We have bottled water, a faucet and replacement filter, and a water test kit. Your water sample will assist in monitoring the lead and copper in the water system. Make sure to submit the water sample. The instructions are included here with the bottle, but make sure to submit within 14 days. If you need assistance or have other questions, you can call 211.

Execution Support:

Product Replenishment Process:

Team	Replenishment Trigger	Replenishment Location	Process
GCSO/MSP	0 Distribution Kits Remaining	Distribution Route: exact location determined by Team Leader	1. Contact warehouse to request replenishment truck 2. Coordinate replenishment location with warehouse 3. Exchange replenishment truck with empty truck
ARC	0 Distribution Kits Remaining	Clio Warehouse	Replenish ERV at warehouse

Warehouse

Tactics:

1. Load a minimum of 2 trucks in preparation for replenishment requests with product loads corresponding to Team Typing Matrix

Lunch

OGCS/MSP WRTs lunches will be provided by the ARC and coordinated by LEOC Logistics.

Reporting:

Tactics:

1. All WRTs will utilize iPads as the primary reporting method and the WRT Distribution Tracking Tool as a secondary method if iPads fail.

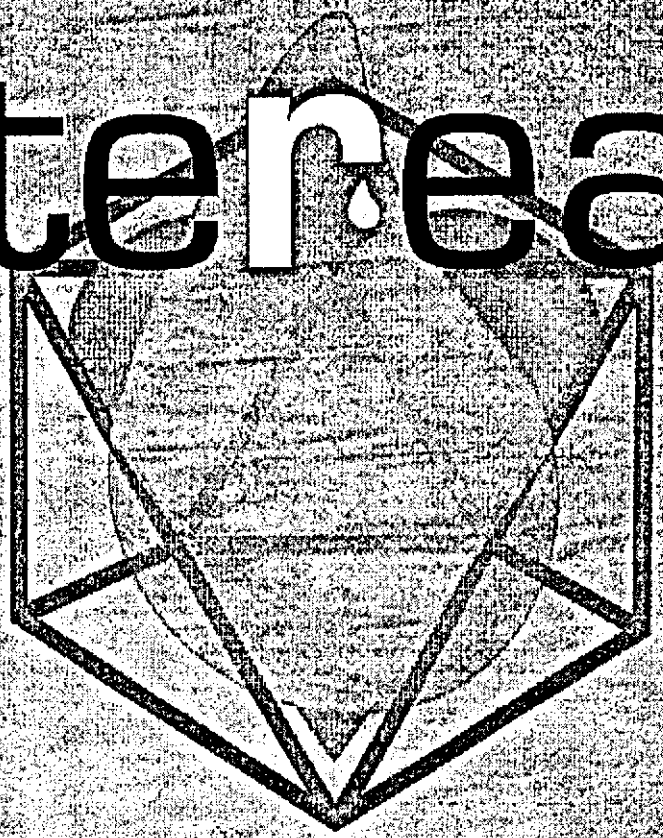
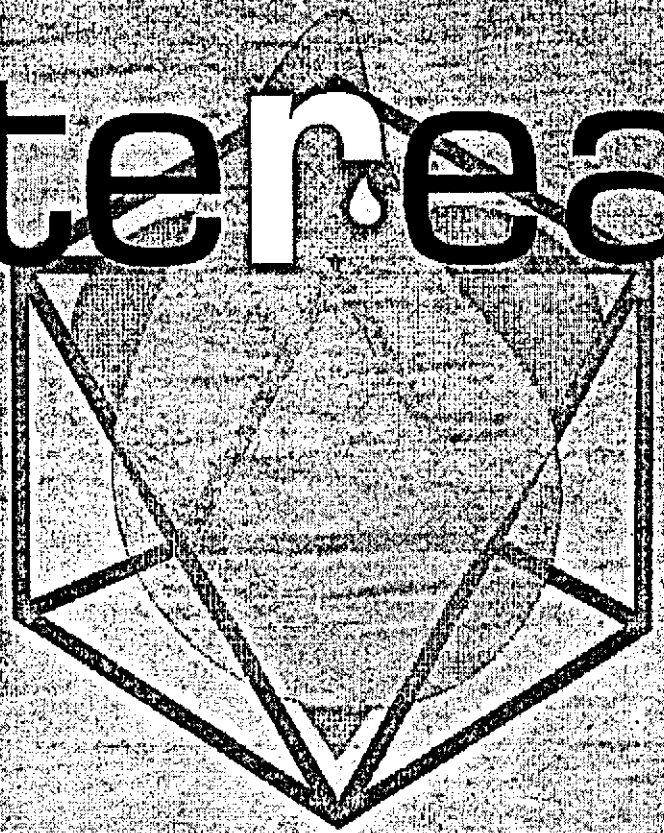
Waterealms

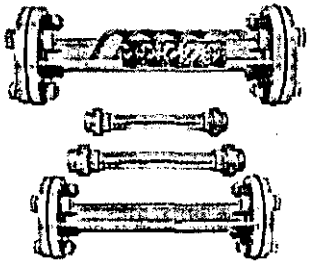


Watereams



Saiseiko Product Summery

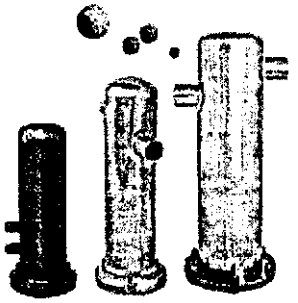
Products Line-Up



AVS
WATER ACTIVATOR

AVS Triple Vortex - Water Pipe

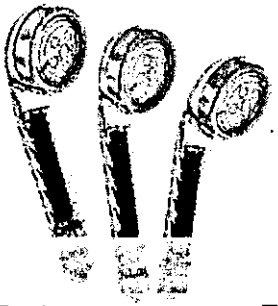
AVS reduces bacteria without the use of any chemicals and it provides an alternative for reducing lime scale in water pipes. This amazing product can provide a solution for people who are suffering from the effects of poor quality water, especially in developing countries. Red rust (Iron Oxide) in water pipes is a major problem in millions of homes and buildings worldwide. AVS helps to reduce corrosion in a cost effective way.



SEM
WATER ACTIVATOR

SEM Triple Vortex combination with FIR Beads – Water Pipe

SEM contains AVS and patented all natural mineral ceramic balls. As water passes through SEM it is treated twice, first by AVS and then by ceramic balls which transform it into high quality water. No chemicals are used in this process. SEM can be installed in various places, for example, hotels, hospitals, restaurants, swimming pools, farms and domestic homes.



cera
IONIC SHOWER HEAD

An innovative beauty and health product, **Cera Shower heads** contain patented ceramic balls which ionize water and provide numerous benefits to skin and hair. Currently there are four models, each of which has its own unique functions. They all contain Saiseiko BA and SE balls. The effect of Far Infrared Rays (FIR) break down water clusters. Smaller water clusters help moisturizing the skin more effectively. In addition, water passing through the balls is ionized and the harmful effect of substances, such as residual chlorine, is reduced.

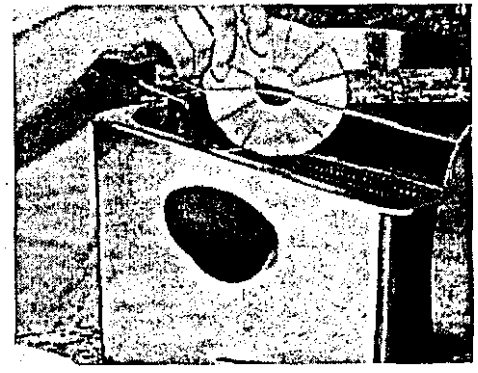
Products Line-Up

saíseíko ball

ANTI - BACTERIAL CERAMICS

The **Saiseiko Ball** (SSK Ball) contains anti-bacterial ceramic balls which kill most bacteria within 9 hours.

Place the SSK Ball into a bathtub, pool or water tank to keep the water safe and fresh. The SSK Ball can be used in spas, pools and Jacuzzis as well as in your own bathroom.



cooking stone

ECO - FRIENDLY CERAMICS

The **Cooking Stone** is made with 100% natural mineral ceramics.

It can help to save energy when cooking by reducing the time required to boil water or to cook food, including frying. It also works well with frozen food.

Theory

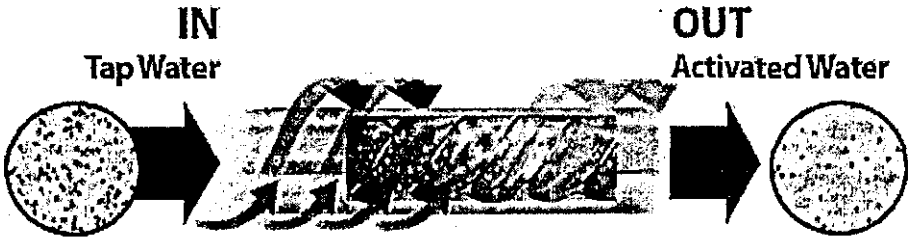
AVS
WATER ACTIVATOR

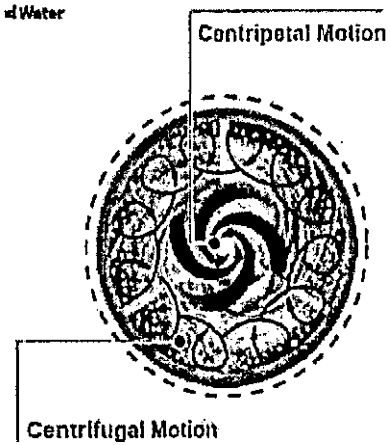
More than 70 years ago, an in-depth study of water and its properties was conducted in Austria. This study led to an ingenious discovery that a vortex increases the energy in water. Based on this ground-breaking theory, SAISEIKO successfully developed its own patented Triple Spiral Chamber water pipe, AVS.

When water passes through the triple spiral chamber pipe, the speed of water is accelerated. Due to this speeding-up, the antibacterial and sterilizing power of the water increases.

AVS Benefit 1

AVS
WATER ACTIVATOR





Activation

Imagine filling a water bottle and shaking it. You will observe water molecules momentarily. When water passes through AVS, this 'shaking' mechanism takes place via our Triple Spiral Chamber design, making the water molecules smaller and enabling it to be more active, in other words activated water.

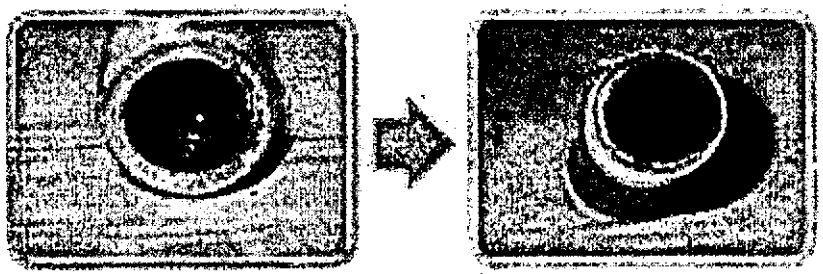
Anti Bacterial

In general there are two types of Bacteria, aerobic and anaerobic. As the names indicate, aerobic bacteria can only live and grow when there is oxygen and the opposite goes for anaerobic bacteria. Most harmful bacteria are anaerobic. When water passes through AVS, the level of dissolved oxygen concentration increases. As a result, these harmful bacteria die. At the same time, as the spiral design pushes lighter substances such as oxygen and bacteria to the edge, this causes the harmful anaerobic bacteria to die.

AVS Benefit 2

AVS
WATER ACTIVATOR

Before Installation of AVS *6 Months Later*



$$4\,Fe + 3O_2 + 2\,H_2O = 4\,FeO(OH)$$
Red Rust

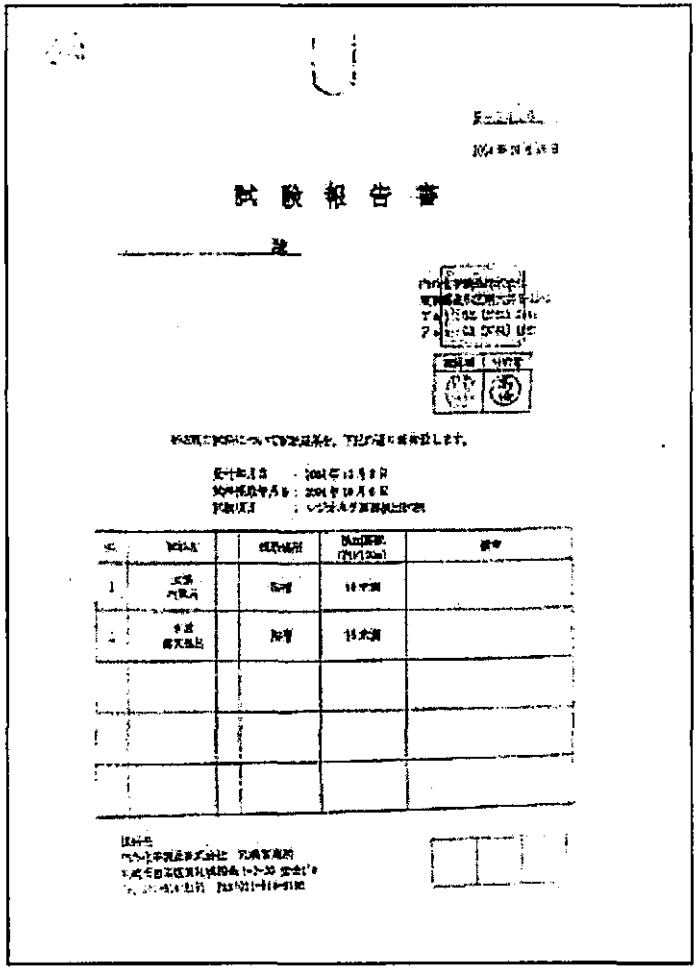
$$6\,FeO(OH) + 2\,e^- = 2Fe_3O_4 + 2\,H_2O + 2\,OH^-$$
Red Rust Electron Black Rust Water Molecule

Reduction of Red Rust (Iron Oxide)

The water passing through AVS is activated and more negative electrons are created. When the negative electrons touch red rust, they become black rust. This is simply the result of a chemical reaction. Once it is converted into black rust it will never revert back to iron oxide. Cleaner pipes mean healthier water supplies for your homes and buildings.

AVS Test Result 1

AVS
WATER ACTIVATOR



試 験 報 告 書

Date: October, 2004
Country: Japan
Location: Spa

A legionella detection test was conducted at a public hot spring in Japan, which is used by 3,000 people per month.

Although 420 CFU/100ml of legionella was found before the installation, one week later this number was less than 10.

Since then, the number has remained below 10. This is the lowest level the bacteria detector can measure.

Surface activation power increases water's dispersing ability. This means that the greater the dispersing power in the water, the easier it is to wash, lather up and remove dirt from the pores.

This test result shows that 76% more salad oil dissolved into AVS treated water compared to normal tap water.

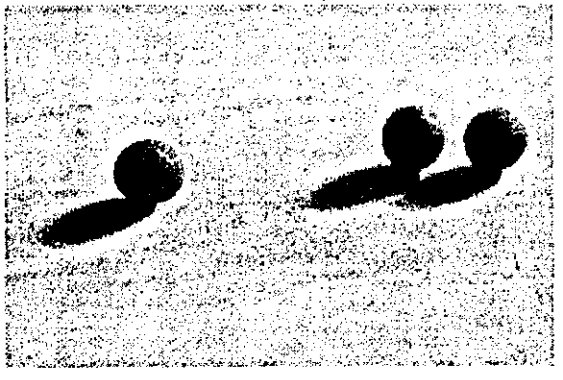
Waterealms

Ceramic Technology

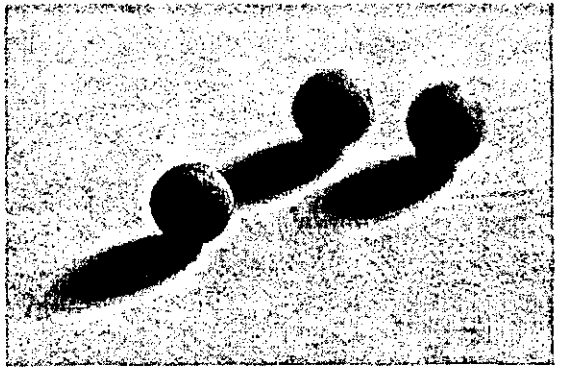
SEM
WATER ACTIVATOR

According to historians, ancient civilisations used ceramic ware such as clay pots to keep their food fresh. In particular, they kept water and oil in ceramic ware when there was no refrigeration available to preserve the quality and freshness of the water.

This wisdom of our ancestors led us to develop our original ceramic technology and to produce high quality functional ceramic balls made with all natural minerals.



BA Balls (black)

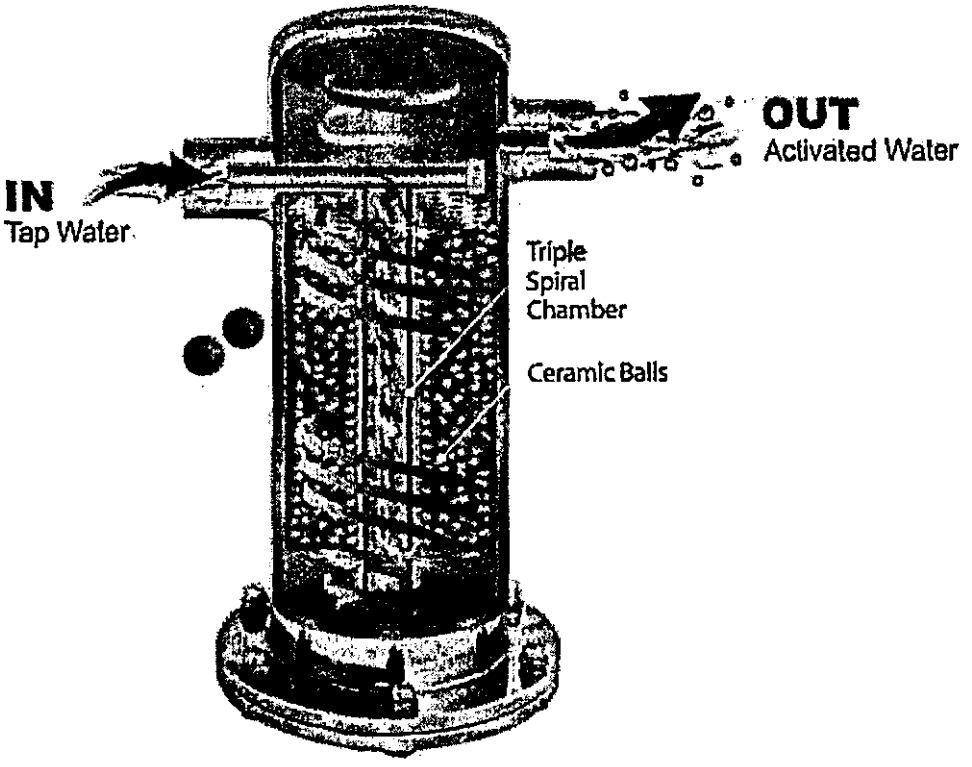


SE Balls (brown)

As these balls contain natural minerals, they both generate Far Infrared Rays (FIR) and ionize water. In addition, the BA balls have an anti-bacterial function. This amazing 100% natural product is an example of the cutting-edge technology that represents SAISEIKO and our values.

Combination

SEM
WATER ACTIVATOR



SEM was developed as a result of combining the triple chamber vortex (AVS) and SAISEIKO ceramic balls.

Tap water first passes through the AVS and then through the ceramic balls.

The tap water is activated and the number of bacteria reduced by the AVS. This processed water is further activated and ionized by the ceramic balls. When tap water is put through an SEM, it is treated twice and comes out as high quality water. This ground breaking innovative technology does not require any consumables, chemicals or power to treat water.

SEM Test Result

SEM
WATER ACTIVATOR

The SEM water activator has been installed in various places such as hospitals, restaurants, spas and a farmhouse.

A nursing home in Hokkaido, Japan

Ms Chieko Matsuyama, the curator of a nursing home, had concerns about the quality of the water and so she installed SAISEIKO Water Activator in 2005. "We have received good feedback from residents since the water activator was installed. Feedback includes, "Recovery from athlete's foot." "Bathing water became softer." "Meals became more delicious." etc. Moreover, our staff are grateful that they have recovered from their skin problems. Taking care of the residents became easier, especially when giving baths.

A clinic in Hokkaido, Japan

"A boy with atopic dermatitis makes a recovery."

Mr Mitsuaki Matoba, a chief director of the clinic, installed a SAISEIKO SEM Water Activator to test in 2004.

"After the water activator was installed, the problem of reddish water was quickly solved and cutting the existing water pipe showed that the red rust had turned black. Currently, we don't have any odour or slime problems, and what's more my son, who has had atopic dermatitis all of his life has recovered from this skin problem."

SEM Test Result

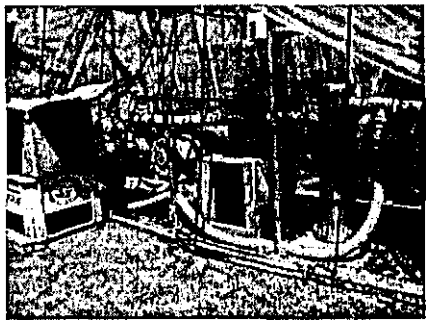
SEM
WATER ACTIVATOR

A hospital in Hokkaido, Japan

"Saved us from paying huge bills for repair"

Mr Masao Sekimoto, who is an office manager at the hospital, installed SAISEIKO SEM Water Activator in 2005.

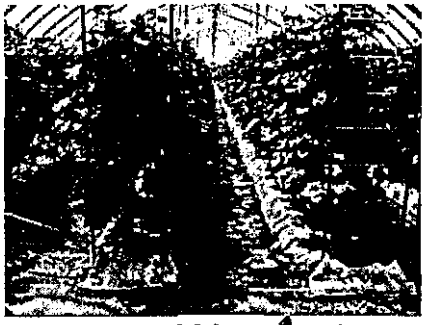
"We have had terrible reddish water problems, and a construction company told us that it would cost around 150,000,000 yen to replace all the water pipes. While trying to find the ideal solution to this issue, we were told about a clinic that had been testing a SAISEIKO SEM Water Activator. We visited this clinic to find out how it worked. We could then verify its performance and the good effect that had on their system and we decided to install the water activator instead of replacing the water pipes. We therefore saved a great deal of money."



A hospital in Hokkaido, Japan

SEM3000 was installed where cucumbers were planted.

Result: Increased yield. (September was usually the last month for harvesting the cucumbers, but this time they were still being harvested in October). Better quality. Less damage by vermin.



SEM Test Result

SEM
WATER ACTIVATOR

Case studies of SEM have been published in several magazines.

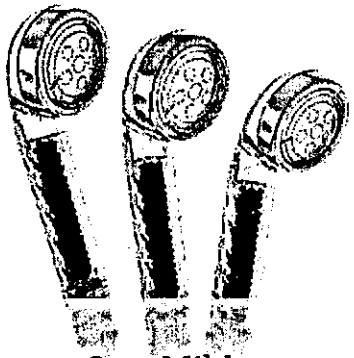
Issue: September 2006
Name of Magazine: Zaikai Sapporo

Red rust changed to black rust within six months.

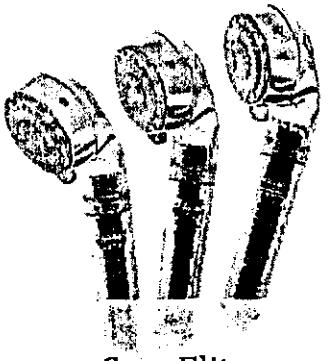
When red rust clogs a water pipe, it causes various problems. In the worst cases, it is necessary to rebuild whole buildings and it has become a serious issue as far as increased industrial waste is concerned. By solving this problem, SEM Water Activator (manufactured by SAISEIKO) has become the focus of public attention, because red rust changed to black rust within 6 months. Florence Mi Mi, one of the distributors of SAISEIKO, requested a lab test in November 2005, and the result was confirmed and certified.

Ionic Shower Head

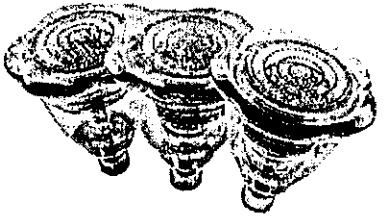
cera
IONIC SHOWER HEAD



Cera Mild



Cera Elite



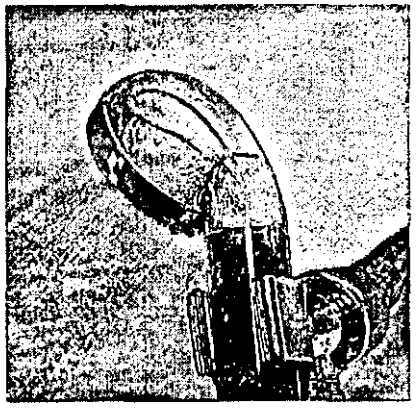
Cera Bloom

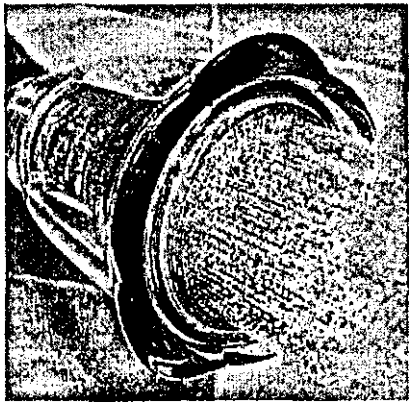
Cera Salon

There are 4 models and all of them contain BA and SE balls. Water passing through the shower heads becomes softer due to Far Infrared effect, which breaks down water clusters. Smaller water clusters can easily enter pores and remove dirt while moisturizing the skin more effectively. In addition, water passing through the balls is ionized and the harmful effect of substances, such as residual chlorine, is reduced.

Ionic Shower Head

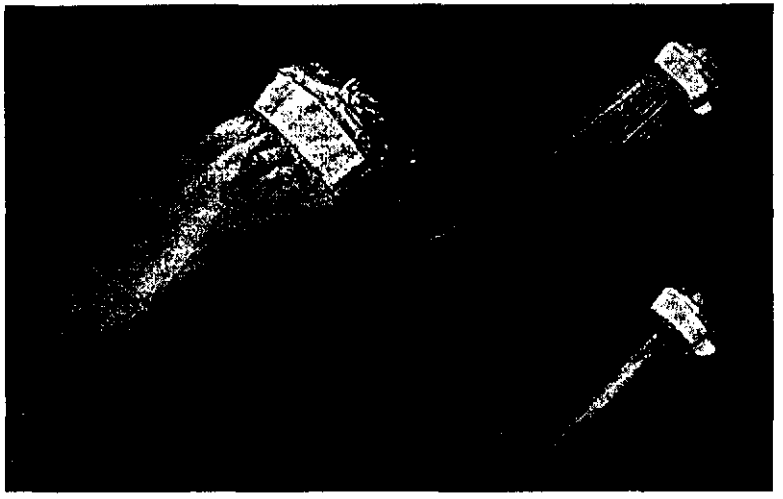
cera
IONIC SHOWER HEAD





Cera Mild and Cera Bloom include an Air-Water Mixture (AWM) feature. Water and air are rapidly mixed making the water more activated and doubling its cleansing power. In addition, because air is mixed with the water up to 30% less water is used.

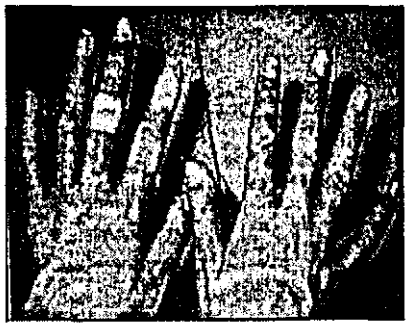
Cera Elite comes with three shower settings; Mist, Massage and Normal. Mist is the most popular mode and it maximizes the negative ion effect.



Cera Feedback

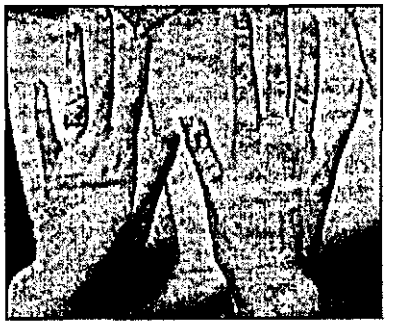
cera
IONIC SHOWER HEAD

Although our ceramic balls are not a medical product, we have received positive feedback from many customers who have noticed an improvement in their skin conditions, for example Eczema and other skin irritations. The following photographs were received from a hair stylist in Japan. Her hands were in very bad condition due to the fact that she uses chemicals every day. As the pictures below show, her skin condition has gradually improved since she started to use a Cera Shower head.



Before

3 months later



6 months later

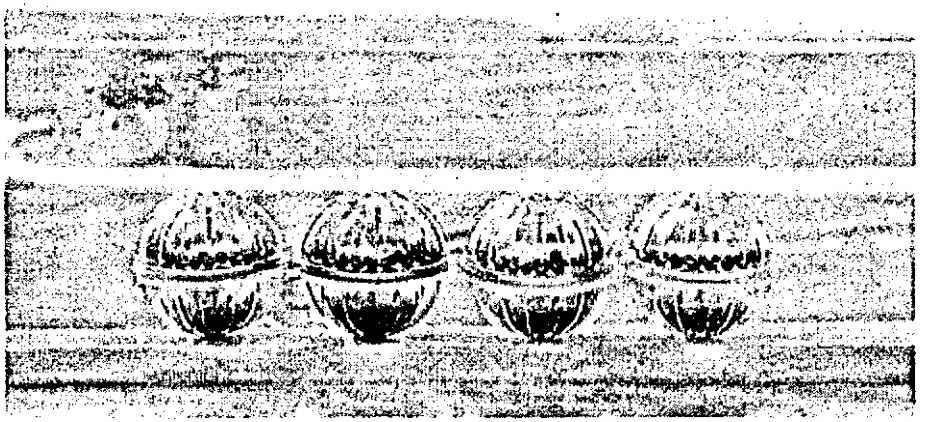
People who have skin problems are often sensitive to water quality. Cera shower heads improve the quality of the water and may alleviate these conditions.

The owner of a New York hair salon tested our shower head in his salon. He and his stylists noticed the benefits immediately and the following day he ordered Cera Shower heads for all the wash basins. We have received a great deal of positive feedback regarding improved skin and hair condition. Therefore we have confidence in SSK ceramic technology.

Saiseiko ball

saíseíko ball

ANTI - BACTERIAL CERAMICS



The patented Saiseiko ball (SSK Ball) contains anti-bacterial ceramic balls (BA balls) which kill most bacteria within 9 hours. It is designed to float on water. Place the SSK Ball into a bathtub, pool or water tank to keep the water safe and fresh. The SSK Ball can be used in spas, pools and Jacuzzis as well as in your own bathroom. It can also be used in any stagnant water including rainwater harvesting systems.

Legionella is a harmful and deadly type of bacteria. One incident of a fatal outbreak of legionella occurred in Virginia, USA in 1996 as a result of untreated stagnant water from the demonstration Jacuzzi in a department store. There was also a case of legionella-related deaths of a number of US officials in Philadelphia in 1976.

When tested in our laboratory, legionella was completely killed within 9 hours.

BA ball Test Result

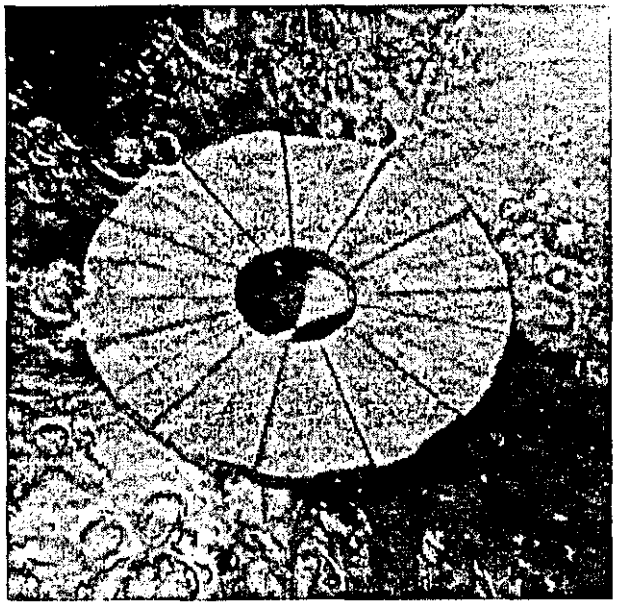
Cooking Stone

cooking stone

ECO - FRIENDLY CERAMICS



The electricity or gas used in homes and restaurants on a daily basis can be expensive these days. Sometimes this cost forces restaurants to increase their prices or in extreme cases they may need to close down.

Naturally good. Naturally wholesome. Naturally healthy. The Saiseiko Cooking Stone will revolutionise the way we cook and help us to decrease our energy consumption. When it is placed in water, it helps the water to boil more quickly and to maintain a high temperature, thus saving energy and cost. It can also be used to keep the temperature high when frying. It is also effective when cooking frozen food. The Cooking Stone acts as a catalyst which is said to bring out the natural goodness in food. It is made of 100% natural materials.

Cooking Stone Test Result

cooking stone
ECO - FRIENDLY CERAMICS

Comparison of time taken for water to boil

	After 2 Mins	After 4 Mins	After 6 Mins	After 8 Mins	Total time to boil
Average time without Cooking Stone	45.3°C	70.6°C	87.1°C	97.5°C	7 m 24 s
1 Cooking Stone (Average)	41.6°C (40.4°C)	73.8°C (65.7°C)	93.8°C (85.7°C)	(N/A)	6 m 00 s (6 m 42 s)
2 Cooking Stones (Average)	61.3°C (54.5°C)	79.1°C (72.1°C)	N/A (89.6°C)	N/A (N/A)	5 m 00 s (6 m 24 s)

**The result shows the best result of five samples.*

(Source: Bureau Veritas Consumer Product Services, Inc.)

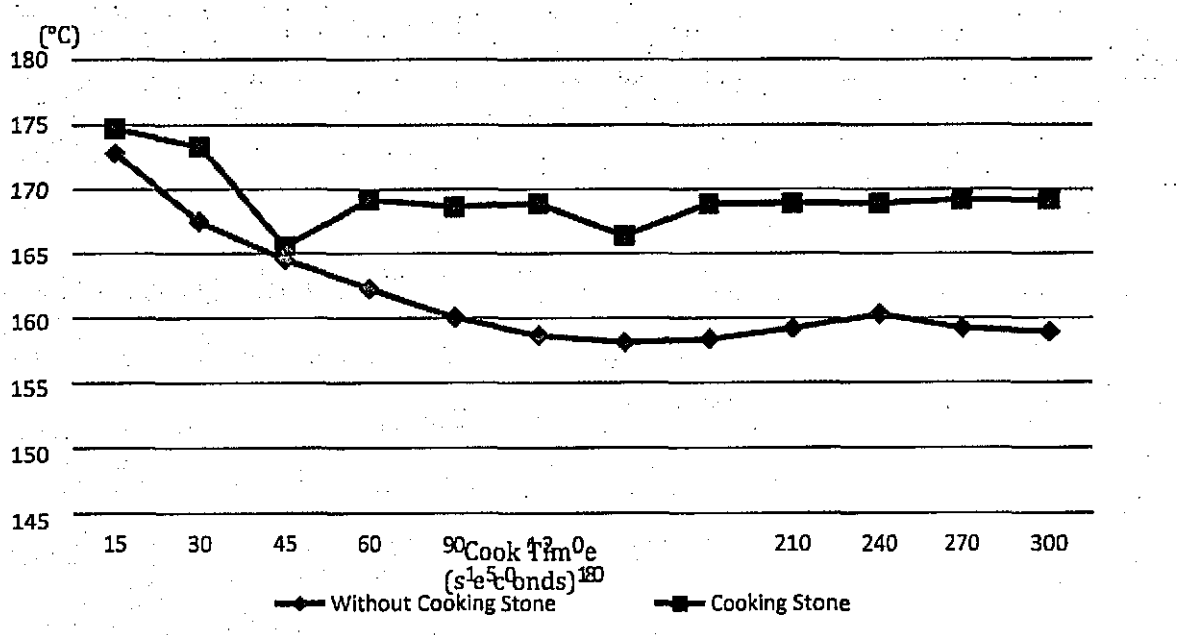
When using the Cooking Stone, water reaches boiling point more quickly. As these results show, the Cooking Stone can help save energy.

Cooking Stone Test Result

cooking stone
ECO - FRIENDLY CERAMICS

Comparison of Cooking Temperature

In this test, one pound (453 grams) of frozen food was put into a fully heated deep fryer. The temperature was monitored at both the top and bottom of the frying oil for a period of five minutes after the food was placed into the oil. This test was repeated with and without the Cooking Stone.



(Source: Bureau Veritas Consumer Product Services, Inc.)

Cooking temperature stays higher when Cooking Stone is used. As this result shows, food is cooked more quickly and this can help save energy.

Legionella Examination Result

The examination was conducted at public hot spring that is used by 3000 people per month.
After installation of AVS, the usage of chlorine became 0.4 ppm, yet the legionella increase was successfully prevented.

This examination was conducted weekly for a month.
Although 4.2 x 10^2 CFU of legionella was found before installation, the total number of legionella was reduced to less than 10 after a week. Since then, the number was kept at 10, which is the lowest level the bacteria test can measure.

DEQ DRINKING WATER LABORATORY - LANSING
DEPARTMENT OF ENVIRONMENTAL QUALITY

REQUEST FOR WATER ANALYSIS

- **Sample Collection Instructions are on the back of this form**
- FEE AMOUNTS ON THIS FORM ARE EFFECTIVE JAN. 1, 2010. Fee amounts are subject to annual changes.
- PREPAYMENT OR DWL ACCOUNT NUMBER IS REQUIRED FOR TESTING

WSSN (Type I-II Public Water) or Pool Serial Number	Does sample contain chlorine? ☐ Yes ☐ No	For questions call us at: (517) 335-8184

SAMPLE SOURCE - *Circle One*
0 - Single Family Dwelling
1 - TYPE I (community, apartment, subdivision, mobile home park, etc., with 25 or more residents year round)
2 - TYPE II (school, industry, restaurant, office, etc., serving 25 or more persons - 60 days or more per year)
3 - TYPE III (all other public supplies, duplex, small office, etc.)
7 - Surface Water (includes bathing beach and wastewater discharge)
8 - Swimming pool or Spa
9 - Other

SAMPLING PURPOSE - *Circle One*
0 - Routine Monitoring
1 - Real Estate Transaction
2 - Repeat Sample
3 - Repair/Construction/New Well
5 - Water Quality Problem
9 - Other

SAMPLE POINT - *Circle One*
1- Public System Well
2- Public System Surface Water
3- Untreated Public Distribution System
4- Treated Public Distribution System
5 - Untreated Private Well
6 - Treated/Softened Private Well
7 - Pressure Tank/Plant Tap
9 - Other

SENDER INFORMATION *PLEASE PRINT* **NOTE: RESULTS WILL BE AUTOMATICALLY COPIED TO LOCAL COUNTY HEALTH DEPARTMENT**

Name	E-mail address
Mailing Address	Area Code & Phone number
City / State / ZIP Code	

SAMPLE COLLECTION INFORMATION *PLEASE PRINT*

Sample Collector Name	Date Collected	Time Collected	Circle One AM PM

☐ Do NOT analyze my sample(s) if received past the EPA specified hold time. (Hold times are indicated on the sample bottle.) **THE DATE AND TIME COLLECTED MUST BE FILLED OUT!**

☐ Analyze my sample(s) even if received beyond the EPA specified hold time.

NOTE: If a selection is not made, your sample(s) will be analyzed. Although samples analyzed beyond hold time typically cannot be used for compliance purposes, the results may still have informational value.

Collector Code *Circle One* (0 - County Personnel 1- Water Supply Operator 2- DEQ DW staff 3- Private Citizen 4 - DEQ Staff other than DW 6- MDA Staff 9- Other)	System/Owner Name	
Collection Site (Street Address)	Township (if known)	Section (if known)
City / County	ZIP Code	Well (if more than one) Number
Sampling Point (kitchen, bath, etc.)	Site Code or Permit Number (if known)	

TESTING REQUEST INFORMATION (REQUIRED)

TEST CODE	REQUIRED UNIT #	DRINKING WATER OR POOL/SPA TEST	FEE	✓
B	30	Coliforms/E. coli (Bacteriology) **30 hour hold time**	$16.00	
R	32	Automated Partial Chemistry, *Including Fluoride, Chloride, Hardness, Nitrate, Nitrite, Sulfate, Sodium and Iron* **48 hour hold time**	$18.00	
CAS	36ME	Arsenic	$18.00	
CPB	36ME	Lead	$18.00	
CCUB	36CC	Lead/Copper for corrosion control	$26.00	
CXVO	36VO	Volatile Organic Compounds	$100.00	
CXTM/HA	36VO & 36HA	Disinfection Byproducts Rule (TTHM & Haloacetic Acids)	$175.00	
TEST CODE	**REQUIRED UNIT #**	**SURFACE OR WASTEWATER TEST (Pond, Lake, Ditch, etc.)**	**FEE**	
NPEC-LO	30	E. coli (Counts 10 - 10,000) *delivery to lab-6 hours*	$15.00	
NPEC-HI	30	E. coli (Counts 10 - 1,000,000) *delivery to lab-6 hours*	$25.00	
NPFC-LO	30	Fecal Coliform (Counts 10 - 10,000) *delivery to lab-6 hours*	$15.00	
NPFC-HI	30	Fecal Coliform (Counts 10 - 1,000,000) *delivery to lab-6 hours*	$25.00	

INSTRUCTIONS:
- Check box next to Test Code(s) of desired analysis.
- Check the UNIT# on bottle to ensure you have the REQUIRED UNIT for desired analysis.
- For other types of testing, enter the TEST CODE, UNIT# (located on the sample bottle) and FEE in the area on the right side of this section.
- Refer to the full Testing Fee Schedule available from county health departments and DEQ Drinking Water Laboratory for other types of testing. **Fee amounts are subject to annual changes.**

Subject: EPA Order website

The EPA order that DEQ is under requires that we provide **"Identification of areas (e.g zip codes, neighborhoods)in the City with Elevated Blood Lead Levels".** The language appears in Section #53c. This is due to EPA by 1/31/16.

Attached is the Blood Count Report for compliance with the EPA Order. Note that there are 2 sheets: one for high risk zip codes and a second for the other zip codes we will be adding because there are some people in those zip codes on Flint water. Small counts are suppressed. We combined 48501 and 48502 because there are not many people living there, but we still consider them to be high risk.

Per Jeff Ellsworth (DHHS)--- Anne Nolan is the Office of E-MI expert assigned to DEQ. She said her understanding is that DEQ intends to use the existing /flintwater site to satisfy the requirements of the EPA order issued last week. She also said she has been told submissions to the site related to the order will go through **Caleb Buehs**, the PIO in DTMB.

Please contact me if you have questions regarding the DHHS report submitted to satisfy the EPA Order.

Importance:	High

Trevor,
There are several items that the City (Mike Glasgow) had provided in response to the EPA Order for the 1/31 deadline and it appears that these may have been sitting on the sidelines since Friday and **need to be posted *as well under the "EPA Order" tab***. *All of the following should be prefaced so* that there's clarity with these items are from the City and not the State. Attached you'll find:

Attachment 1-4) Water quality parameter measurements in the distribution system. These files (4) are labeled EWDM, all from January 2016.

- Recommendation that the hyperlinks / buttons for each of these 4 files be called: "City of Flint, Distribution System Weekly Monitoring Report....." with the associated date from the end of the file completing the end of the hyperlink / button name

Attachment 5) The most recent Monthly Operational Report (Dec 2015), which is labeled MOR.

- Recommendation that the hyperlink / button for this file be called: "City of Flint, Monthly Operational Report, Dec. 2015"

Attachment 6) The list of Main Breaks over the last year labeled.

- Recommendation that the hyperlink / button for this file be called: "City, of Flint, Water Main Break Information"

Attachment 7) A list of active water accounts.

- Recommendation that the hyperlink / button for this file be called: "City of Flint, Active Water Account List"

We have information related to disturbances from construction, however this list contains names & addresses which need to be protected. So can we add a generic hyperlink / button labeled "City of Flint, Road & Sidewalk Work" that opens a page that says "location list available upon request". We're going to have a map produced that will show locations generically.

Thank for getting this information up. Feel free to call my cell should you have any questions: 517.290.5603

Trevor & Mel,
I took a look at what's posted, and we've got the wrong "service line data stats" document up; we had modified that document to ensure we had a disclaimer added which has been reviewed by Trevor Vandyke of DNR's Legal Staff.

Please see the attached version that should replace the one that it up there.

In our conversation with the EPA this afternoon, they'd like to see us posting the response items to the Order in a very specific location. Instead of "in the home" are we able to add a tab labeled "EPA Order" and put this documentation there?

Mel, I'll follow up with a phone call to be sure we're getting the right documents to the right people.

Subject:	RE: SEOC SUmmary for 1/30/2016
Attachments:	Flint Residential Testing Report January 30, 2016.xlsx; Sentinel_Water_Test_Sites_20160131.xlsx

Everyone...
I looked at the data set that I received from George, which contains 4924 sample records. This table is identical to the table I received from Deb Mackenzie-Taylor shortly after I received George's table.
Here is my first impression of the data table...

- Of the 4924 sample records, 106 are missing a street address

To put these sampling points on a map we need either a Lat./Long. for each point, or we need to connect this data table to Flint's Parcel GIS layer which already has a Lat./Long. location. To make that critical connection we need to link both tables together by Street Address. When I made that connection, only 2613 had a matching address from both tables, leaving 2310 sampling points that we cannot put on a map. For these missing sample points, the address field must be cleansed to match the parcel layer.

For GIS to work in our favor we need **consistent street addresses** (that match Flint's Parcel Layer) on any 'data' we collect now and in the future in Flint (or take a GPS device to manually collect a Lat./Long.).

I would suggest that this be an important discussion point with the entire team.

~Dave..

The water test results GIS file from 1/28/2016, that DSNR-GIS has access to ... has a last recorded entry on 1/21/2016... if there is a newer file, it needs to be posted to the Flint AGO

Dave, I don't know. I do have the spreadsheet from Sygo that is the water testing results from January 30. But I just read the SEOC summary that said that the Jan 28 data was already mapped. I don't know how much difference there is between the January 30 and January 28 water testing results, but I thought if the 28th is already mapped, we could start with that instead of creating another map for the 30th results. Perhaps the SEOC is daily producing maps of the daily water testing results?

The daily report indicates that the map of water test results through Jan 29 was completed by the SEOC-GIS and sent to ECC-IMT.
DD Sygo has asked that we compare this list of water test results to the potential sentinel sites that have been selected to see if we need to adjust the sentinel sites list. Can the ECC GIS folks put the water test results on a map with the 400 potential sentinel sites, please? That way we can visually compare locations.

Subject: More Sentinel Site Selection Mapping Needs

Hi Nick and Dave,

First and foremost, many thanks for working hard today to get us the maps and data we needed!

Susan and Richard will be here tomorrow at 8:00 am in the McCauley Conference Room, 4th Floor, South Tower, to talk you through our next mapping and data request, which is hard to explain in a note. *However, here is a brief summary of* what we need.

A map provided today had a layer of Potential Water Testing Sites with dots *representing each of the homes where* residents volunteered to do water sampling (1,951 dots). We took each of the 9 full-size ward maps and identified the 156 Potential Water Testing Sites in the pink parcels with lead lines (see the attached table). These are marked on each map with arrows ("Sign Here"). **Please color code these 156 dots red.**
Then we looked at the areas with elevated blood lead levels (article with map provided by Dr. Mona Hanna-Attisha – not digitally) and added additional sites to make sure the high blood level areas were included. These Testing Sites were marked on each map with green sticky notes (most say "Please Initial"). *We added 158 green sites. Please color code* **these dots blue.**
Lastly, we added additional sites so to fill in the areas spatially. These are orange stickers. We added 94 orange stickers. **Please also color code these dots the same as the 158 above (blue).**

For the EPA meeting on Monday, we would like to present 5 maps of:

1. **Entire Flint area with the *400 selected Sentinel Testing Sites (all 400 dots in black) with the Ward boundaries* and zip codes included.**

2. **The above map (#1) with an overlay of Dr. Mona's Blood Lead Levels heat map.**
3. **The above map (#1) with an overlay of Environmental Justice % minority population map.**
4. **The above map (#1) with an overlay of Environmental Justice % for pre-1960 housing (lead paint indicator).**
5. **The above map (#1) with an overlay of Environmental Justice % low income level map.**

Thanks again. Bryce

MSP-EOC-MDEQ

From: Tom Page <tpage@uwmich.org>
Sent: Wednesday, January 27, 2016 8:29 PM
Subject: 2-1-1 Update Flint Water Response for Wednesday, January 27, 2016
Attachments: *2016-01-27 MI211 Flint Water Daily Update.docx*

This is the daily 2-1-1 summary on the Flint Water Response for Wednesday, January 27, 2016

GENERAL INFORMATION:

- At 5:00 pm today Gov. Snyder held a Robo-Townhall with Flint residents. Approximately 8,000 community members participated. During the call an unknown number were cut off. They tried to call back in using caller id, but were unable to reconnect. Several very irate residents called 2-1-1 asking for a number to reconnect. Others called demanding to "take me off the governor's robocall list". By the time 2-1-1 was able to reach state partners to determine what was occurring, the Robo-Townhall was completed. State partners are working to determine if the call was recorded and if there will be link where the public can listen to the call.
    - One caller said Gov. Snyder referred to 2-1-1 "dozens of times". Managers and staff had to stay late without notice to take the additional calls, some of which lasted 30 minutes as angry callers vented on 2-1-1 staff who repeatedly had to explain that 2-1-1 is NOT part of the governor's office or a state agency.
    - Based on the anger and confusion expressed by callers, I asked one of the PIO working at the SEOC to connect 2-1-1 to the governor's office to address how the state will refer to 2-1-1 and distinguish it as a service independent of state government. The PIO made the introduction and I was immediately contacted by the governor's Director of Communications who expressed a willingness to meet and ensure we have a system in place to coordinate information sharing between 2-1-1 and the governor's office so we can focus on the needs of Flint residents.

CALL VOLUME:

As noted above, there was an unexpected surge in call volume between 5:00 pm – 6:30 pm due to the Governor's Robo-Townhall. Otheriwise daytime call volume is slowly dropping as the seasonal increase for tax prep assistance stabilizes after the initial high demand.

SPECIAL NEEDS/REQUESTS

- **FOLLOW UP:** As noted in past updates, Michigan 2-1-1 been advised by DHHS to refer callers with concerns their children developing rashes from bathing to contact their primary care provider. With 2-1-1 as a partner with Michigan Association of United Ways on the "Children's Health Access Program" (MI-CHAP), MAUW contacted the Genesee County CHAP team to confirm they had the capacity to assist families that do not have a primary care provider. Moving forward 2-1-1 will tell callers *"If you don't have a primary care provider for your child, please contact the Genesee Children's Healthcare Access Program at 1-810-953-CHAP (1-810- 953-2427) for assistance in finding one".*

RUMOR CONTROL

- ☑ **Yesterday's report at on** www.Snopes.com titled: ***"Flint Residents Told That Their Children Could Be Taken Away If They Don't Pay for City's Poison Water?"*** (http://www.snopes.com/flint-water-crisis-cps/) has been thoroughly documented, debunked and is labeled **"FALSE".** MDHHS staff responded quickly and followed up with Snopes and provided a statement from Children's Services Agency Executive Director Steve Yager that,

    "MDHHS has not assigned a single Children's Protective Services complaint due to any issues related to Flint water. MDHHS works proactively to assist families whose water is shut off and to ensure families have water filters and bottled water in Flint. When a family is without water, our goal is to help that family provide clean water for their children. That can be through assisting families in applying for State Emergency Relief, setting up plans for children to access safe water at a relative's home or providing

bottled water. **We do not petition the court to remove a child solely for the lack of water in a family's home."**

- ☑ **Is there a contact in state government who is monitoring media who could feed news stories and updates to 2-1-1 to keep the system apprised of emerging stories?**
  - ☑ **UPDATE:** DHHS Communications staff are monitoring social media and responding to social media inquiries and leads as they are identified.
- ☑ Today a City of Flint resident called 2-1-1 reporting a social media post that said "Sparkletts 33.8oz contains lead". The 2-1-1 agent shared the information from the MDEQ statement that all sources of bottled water have been tested and MDEQ has confirmed they are all have undetectable levels of lead and copper.

UNRESOLVED

- ☐ **From 1/18/16:** Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will continue.
- ☐ **From 1/18/16:** One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?
- ☐ **From 1/20/16:** Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any properties are free from lead contamination. **Is there are state agency or partner who can give real estate agency and home inspectors information on their potential liability.**
- ☐ **From 1/25/26:** Organizations distributing bottles to collect water samples report running out of bottles. **Is there a contact for individuals and organizations to get additional testing sample bottles?**
  - ☐ **From 1/26/26:** Callers are asking about the efficacy of various water filters and whole-home filtration system to screen out lead. **Is there an state- or independently-vetted list of effective filters available for residents to reference.**
  - ☐ **From 1/26/26:** There is high demand for shower filters due to reports of rashes and potential lead risk to children from using water to bathe. 2-1-1 is telling callers that shower filters are available for purchase through home improvement stores, based on a google search. **Are shower filter donations a request that can be coordinated through Good360 or another supplier? UPDATE:** The Michigan 2-1-1 office passed on the demand for shower filters to Good360, which is looking into options to meet this need.
  - ☐ **From 1/26/26:** Callers are asking about the availability of whole-home filtration systems. **Is there any guidance on whether this is being considered as an option for residents?**

Hey Jennie,

I have a Mark Keller from the Clear Water Systems in Hartland. He does the water testing for the local Home Depot in Hartland. He is wanting to be able to help the residents of flint by going into the their homes to help do the water tests. However he needs someone to give him the test for him to do. I did get his information and told him that someone one would be in touch with him about this. He can be reached at 810-499-1740.

Subject: Re: FW: Additional Zip Codes
Attachments: franchise locations.PDF

Attached is a list of what are called "franchise locations". They are on Flint water but it may be charged through the municipality. It is a complete list. Other than that you may access property lookup via the City of Flint website to search for any property by name or address and if it is listed they are billed by Flint and therefore receive water from Flint.

Please note that with the volunteers that are helping the DEQ lab sort samples there has been some confusion and samples are often mixed in regardless of there origin.

Sincerely,
Melanie Poisson, Clerk

Attachments:	Flint Water Sample Testing Bottles.xlsx

Update 1/27/16 – Shipments as follows:

1. 10 cases (600 bottles) are ready to be shipped out for delivery on Monday, 2/1/16 – 1 case to be delivered to Kirby for lot verification
2. 325 cases (19,500 bottles) will be assembled and delivered no later than Friday, 2/5/16 – 1 case to be delivered to Kirby for lot verification

These two deliveries will sandwich the VWR delivery, scheduled for Wednesday 2/3/16. I will set up a weekly conference call to review inventory and need going forward.

Also attached is an updated spreadsheet encompassing the above shipments. Thank you.

Looks like we are ok with quantity. As soon as I can verify we have enough instruction sheets and labels, I'll probably bring in resources (tomorrow or Wednesday) to make sure we have enough test kits and don't run out. Current quantity of prepped kits should last at least a couple of days. Institution sampling will start to go through bottles fairly quick starting the weekend after next and we'll have to monitor to make sure we maintain enough assembled kits to meet demand.

OK. See attached spreadsheet. I believe the shipment received are the two top in the highlighted area. The shaded area are the numbers Nina advised were shipping. So there is an error somewhere with 6 extra cases if Bonnie is reporting accurately. Anyway, we have the remaining order of 58 cases still to come in. Hopefully Shasta will get back

to us with shipping estimates and accurate quantities.... Does it appear we are holding up with demand now with ample cushion?

Thank you.

No one assigned to ARC today. We have about 6,000 assembled kits currently. Trying to find out when shipments will be received so we can plan to finish up all of the kits without delay. Resource(s) will be deployed to ARC in the near future to finish up that activity.

Subject: RE: Test Kit Bottles

I was just told that was a shipment of 56 cases. There should be 144 bottles to a case. I believe this is the second to last shipment we have with VWR at this time. Is someone assigned to ARC today? These should be the same lot as the last shipment. Of course must be confirmed with each case.

Attachments: 160127230206.pdf; 3306 N. MLK, Lansing Warehouse.pdf

Attached is a copy of the rental agreement that Paul has signed and sent to DTMB Real Estate for their signature and finalization. We will have access 2/1/2016 which is next Tuesday. I will work with Carol Smith and the landlord/Real Estate on the details of gaining keys/access to the site.

The DEQ's intention is to only use the garage space so we will be securing that space separately from the house. DTMB Real Estate is in discussions with DHHS regarding some of their staff utilizing the house for the same criteria, Flint related and temporary. If in fact they decide they have interest in entering into this agreement, we would discuss any concerns prior to creating an MOU with DHHS. I have made it clear what we want to keep the spaces secured separately and that we would need the driveway free and clear to allow access to the garage bays for the daily activity of the pallets of water samples form the Lab. I will keep you posted if that progresses any further.

I will pass along the FINAL rental agreement once we receive it.

Please let me know if you have any questions or concerns.

Thanks

MK

Jeanette

As we previously discussed, you are my contact to triage and route external inquiries. Bluewater called me this morning, and I requested an email with more information.

It is unclear to me whether this unit meets the standards used for the faucet water filter sourcing. Can a resource be identified to check? If not, someone may want to consider reaching out to the two locations that received donated units.

Thanks for routing this into the correct hands.

Rebecca

Subject: Bluewater water purifiers help Flint

Hi Rebecca,

It was nice talking to you this morning, we will appreciate if you can read this email and forward to related team who in charge of procurement for Flint water crisis.

Bluewater is a Swedish company that has innovated a patented second-generation reverse osmosis technology which turns tap water into healthier drinking water by removing up to 99% of almost all known water-borne contaminants; plus, cuts the water wastage common to traditional reverse osmosis systems by up to 82%.

Bluewater has been selling in the USA for the past 18 months, based out of Overland Park, Kansas, where we also have our warehouse that serves customers across the United States. We are a sister company to Blueair, which is one of the major air purifier companies in the United States, based out of Chicago.

Last week saw us donate and install two of our high performance water purifiers in Flint, Michigan, in response to their crisis as our water purifiers excel at removing lead and other toxic metals from residential drinking water. While we applaud people donating water bottles, it is only a short term solution, whereas as water purifiers are both a short-term and a long term solution.

One Bluewater Pro machine was installed at the Community Center at Catholic Charities of Shiawassee and Genesee Counties, where they serve 1,000 meals every day to local residents. The other unit was installed at Shelter of Flint, the largest shelter at Flint.

Both units were installed by Bluewater's Product Manager who traveled to Flint personally. FYI, many bottled water brands in the USA use reverse osmosis to purify their water. Using a Bluewater unit is a cheaper long-term option that also contributes to a better environment because they negate the need for plastic bottles as they deliver purifier water 'on demand'. (a side note, as you may already know, "Pepsi Admits That Its Aquafina Bottled Water is Just Tap Water, Coca-Cola's Dasani Is Next" see news of today http://healthycures.org/pepsi-admits-that-its-aquafina-bottled-water-is-just-tap-water-coca-colas-dasani-is-next

The Bluewater Pro400 reverse osmosis water purifiers we donated to Flint can produce 52 gallons of purified water per hour, which means we can supply 2,700 people a total of two liters of clean water free of lead and other toxic metals every day. This translates into saving 4,800 one-liter bottles being put into the environment every day!

The compact Pro is designed for professional use, in restaurants, hotels, schools, hospitals and laboratories. Installing just 38 of our units in Flint would deliver the 100,000 residents two liters of totally clean water every day - meeting their basic daily human health need for drinking water.

Bluewater harnesses our own patented second-generation reverse osmosis technology, which removes practically all toxic contamination from tap drinking water including lead. The other contaminates we remove include other heavy metals, pesticides, medical residues, and dioxins and petro chemicals.

What also makes our water purifiers unique is that our unique technology ALSO radically increases the efficiency of water treatment, which translates into a Bluewater unit using 82% less water to generate clean water than a traditional reverse osmosis unit.

Reverse osmosis technology purifies water by forcing untreated water through a semi-permeable filter or 'membrane'. Bluewater membranes will block toxic metals and chemicals down to 0.0001 micron (that's 500,000 times smaller than a human hair). Our technology also delivers water 'on-demand', which means no need for a holding tank

As a business, we cannot afford to donate an endless number of units free to Flint, but due to the special nature of the situation (and the fact that most of us are parents of small children and have huge sympathy for those impacted by the crisis) we want to step up even more by offering Michigan State prices that are very substantially discounted. In fact, we want to offer you a one-off purchase opportunity that sees us offering you our products at the manufacturing price (i.e. we make no margin on the deal).

This would see the products we recommend you consider coming in at:

Pro 400C-HF(high flow) (this is the model we donated to Flint) $1920 + shipping
(suitable for professional use, hospitals, labs, restaurant, coffee shop, office building)
- Superior Osmosis Technology
- Direct flow, no need of tank
- Capacity up to 52 gallon per hour
- Clean water delivery rate of 52 gallon per hour
- Cleaning brackish water, up to 7500 ppm
- water quality monitor
- Calibration of cleanliness
- Advanced leak protection system
-Clean water per kWh: 433L/kWh (114.3gallon/kWh)
-Clean water rate: 222L/hour (58.6 gallons/hour)
-Dimensions: 225 x 466 x 460mm (8.9 x 18.3 x 18.10 inch)
-Weight: 29kgs (64lb)
-Water recovery rate: 60-70%

The other two models we could consider as an alternative (the only difference is that the water flow is less powerful) are:

Spirit 300-HF(high flow) $1350 + shipping
Compact design that fits into any contemporary kitchen
- Designed for Municipal water
- Superior Osmosis Technology
- Capacity up to 43.2 gallon per hour
- Director Flow, no need of tank
- Extra compact Design
- Advanced leak protection system
- Clean water per KWh: 377L/kWh (99.5 gallons/kWh)
- Clean water rate: of 99L/hour (26.2 gallons/hour)
- Dimensions: 150 x 462 x 365 mm(5.9 x 18.2 x 14.4 inches)
- Weight: 15 kgs (33lb)
- Water recovery rate: 40-60%

Spirit 300Cp-HR(high rejection) $1500 + shipping
Compact design that fits into any contemporary kitchen, can connect to dish washer, coffee maker, ice machine/refrigerator
- Designed for Municipal water
- Superior Osmosis Technology
- Capacity up to 43.2 gallon per hour
- Director Flow, no need of tank
- Extra compact Design
- Advanced leak protection system
- Clean water per KWh: 377L/kWh (99.5 gallons/kWh)
- Clean water rate: of 99L/hour (26.2 gallons/hour)
- Dimensions: 150 x 462 x 365 mm(5.9 x 18.2 x 14.4 inches)
- Weight: 15 kgs (33lb)
- Water recovery rate: 40-60%

Please do not hesitate to get back if there is anything additional information you need from us. Attached is our catalog and photo how it looks in the kitchen.

Here are two reference you can contact at Flint, they are using our donated water purifiers now for producing pure water

Subject: 2-1-1 Update Flint Water Response for Tuesday, January 26, 2016
Attachments: 2016-01-26 MI211 Flint Water Daily Update.docx

This is the daily 2-1-1 summary on the Flint Water Response for Tuesday, January 26, 2016

GENERAL INFORMATION:

- **Reminder: Anyone having difficulty dialing 2-1-1 can use the alternate toll-free number 844-875-9211.**
- On Wednesday, January 27 at 7pm MSNBC's Rachel Maddow will be hosting a broadcast town meeting at Brownell/Holmes STEM Academy, 6602 Oxley Dr., Flint. See link at http://www.mlive.com/news/flint/index.ssf/2016/01/what_to_know_about_rachel_madd.html

CORRECTIONS AND CLARIFICATIONS
None today

CALL VOLUME:
Call volume continues to be high, requiring extra staffing from other regional Michigan 2-1-1 partners and using managers at Central Michigan 2-1-1 to again take calls during the peak demand. Wait time today did increase around the noon hour resulting a 20-30 minute hold time for callers during that period. Callers did not express frustration or dissatisfaction with longer than average wait times.
Follow on 1/25/16 call volume: Jennie Pollak, Central Michigan 2-1-1 Manager, reported that during yesterday's peak demand there were a maximum of four (4) calls in queue for Flint Water Assistance. The major cause of high call volume over the past week is related to referrals for free tax preparation assistance.

- 2-1-1 is exploring options to address capacity issues with the SEOC and Michigan Community Service Commission, including utilizing volunteers or contracting with an out-of-state 2-1-1 provider to assist with water-related calls.

SPECIAL NEEDS/REQUESTS

- ☐ **Callers continue to have many questions about various water filter options.**
  - ☐ Callers are asking about the efficacy of various water filters and whole-home filtration system to screen out lead. **Is there an state- or independently-vetted list of effective filters available for residents to reference.**
  - ☐ There is high demand for shower filters due to reports of rashes and potential lead risk to children from using water to bathe. 2-1-1 is telling callers that shower filters are available for purchase through home improvement stores, based on a google search. **Are shower filter donations a request that can be coordinated through Good360 or another supplier?**
  - ☐ Callers are asking about the availability of whole-home filtration systems. **Is there any guidance on whether this is being considered as an option for residents?**
- ☐ **FOLLOW UP:** SEOC is coordinating with Michigan 2-1-1 on a standard form to use for water resource delivery requests. A MI211 vendor is converting the form into an electronic that will allow 2-1-1 agents to collect the callers' needs and delivery information, then automatically send the individual requests in real-time to the Genesee Sheriff contact responsible for managing deliveries. **The vendor notes it is possible to automate work orders directly to an e-tablet or mobile device if this would be useful for tracking. Is there SEOC/Sheriff's Dept interest in pursuing this option?**
- A handful of callers have asked 2-1-1 specifically about FEMA relocation assistance. 2-1-1 has directed them to traditional relocation services such as DHHS with the caveat that this kind of support is minimal and that no formal relocation assistance has been established at this time for Flint residents due to the water situation.

- Callers are asking about reimbursement for medical expenses, such as previous co-pays, that are related to treatment or testing. Until further notice 2-1-1 is telling callers they are responsible for their medical expenses, but we anticipate this will be an ongoing concern.

RUMOR CONTROL

- ☑ **FOLLOW UP ON 1/25/16:** 2-1-1 is receiving calls from residents who are very confused and concerned about the statement from Attorney General Schuette that, "I would certainly not bathe a newborn or infant in Flint water".
  - ☑ SEOC provided a copy of the "Lead In Water" information sheet as a reference for 2-1-1 agents and posted the document at www.michigan.gov/flintwater under the "In Your Body" link.
  - ☑ **DHHS has issued the following statement on the safety of bathing in Flint water:**
    - Parents can maintain routine bathing practices. We do recommend that bath time be used for bathing only, after which children should be taken out of the bath rather than be allowed to play in the water for extended periods of time.
    - We are aware that there have been concerns related to rashes.
    - If a resident has a rash that they are concerned about, we recommend they contact their primary care doctor.
    - Currently, rashes are only reportable to MDHHS when there is a suspect infectious disease such as measles or chickenpox.
    - MDHHS is working together with the CDC and Genesee County Health Department to ensure we're monitoring health issues that may be related to water.
    - We will be building on our partnership with the local provider community to determine what additional supports and surveillance may be necessary.
- ☑ **FOLLOW UP ON 1/20/16:** Another rumor reported is that Legionella can be aerosolized and inhaled if people boil water on the stove or use a humidifier to humidify the air in their homes. **Can a health professional verify the risk of boiling Flint water or using it in an ultrasonic/cool mist humidifier?**
  - ☑ **RESOLUTION:** DHHS Medical Epidemiologist, Dr. McFadden, provided the following response:

Q: Can Legionella bacteria be aerosolized and inhaled if people boil water on the stove or use a humidifier to humidify the air in their homes?

A: Boiling water is one effective way to kill bacteria including Legionella, so steam that comes directly from a source of boiling water will not contain live Legionella and is not a source for Legionella transmission.

Inhalation of aerosolized water droplets containing Legionella is one of the ways that people get legionellosis. ***In-home portable humidifiers are known to generate aerosolized water particles that can then be inhaled. Dirty reservoirs and filters in humidifiers can quickly breed bacteria like Legionella.*** Use of tap water for these devices is strongly discouraged. Most manufacturer guidelines specify that only sterile water should be used in such devices (including rinsing of humidifier containers) and they should be cleaned regularly and thoroughly to prevent bacterial growth and transmission of potentially-aerosolized organisms like legionella. If these devices are used, manufacturer guidelines should be closely followed.

- ☐ **WHO FROM STATE OF MICHIGAN IS MONITORING SNOPES.COM?** www.Snopes.com is a popular fact-checking web site that works to identify the source of internet rumors, then verify or dispel them. It labels stories as 'True', 'False' or 'Unproven'. There is long article posted today on Snopes at http://www.snopes.com/flint-water-crisis-cps/ titled: ***"Flint Residents Told That Their Children Could Be Taken Away If They Don't Pay for City's Poison Water?"***. The label on the story is **'UNPROVEN'**.
  - **SEOC is following up with SNOPES after receiving an advisory message from 2-1-1.**
  - **Strongly advise a PIO or other communications professional is tasked with monitoring this site on a daily basis to address rumors as they emerge.**
- ☐ **Is there a contact in state government who is monitoring media who could feed news stories and updates to 2-1-1 to keep the system apprised of emerging stories?**
- **FOLLOW-UP ON 1/25/16:** 2-1-1 received a report that the e-tablets being used for real-time data tracking of water resource deliveries to homes have been taken away due to concerns that tracking data on the needs of homebound residents is a potential violation of HIPPA. **SUGGESTION:** 2-1-1 received a recommendation that e-tablets could have an electronic disclaimer that residents could sign when they receive their first delivery. This could also authorize regular deliveries of water-related supplies to homebound residents.

- ☐ **Is there any discussion about establishing a regular delivery schedule for homebound residents, particularly those with a need for sterile water for medical devices like nebulizer? What issues need to be addressed to support this?**

UNRESOLVED

- ☑ **From 1/15/16:** 2-1-1 is trying to identify a resource *to pick up* test kits from homebound/senior residents who cannot drop off test kits at designated sites. **RESOLUTION: SEOC has approved inclusion of this need on the standard referral form mentioned above in the Special Needs/Requests section.**
- ☐ ***From 1/18/16:*** *Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will continue.*
- ☐ **From 1/18/16:** One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?
- ☑ ***From 1/18/16:*** *Callers are asking about shower heads that can filter water for bathing. 2-1-1 continues to receive reports of rashes attributed to bathing in unfiltered water.*

RESOLUTION: See DHHS statement above in Rumor Control

- ☐ **From 1/20/16:** Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any *properties are free from lead contamination.* ***Is there are state agency or partner who can give real estate agency and home inspectors information on their potential liability.***
- ☑ **1/21/16:** Calls continue to increase regarding how to recycle empty water bottles. A recycling vendor contacted 2-1-1 and was referred to United Way of Genesee County. **Does the City of Flint offer recycling? If not, what are the options for people to dispose of the empty plastic bottles? RESOLUTION:** Youngs Environmental has provided 2-1-1 with information on several recycling drop off sites.
- ☑ **From 1/25/26:** 2-1-1 has received several calls from individuals complaining about their interaction with National Guard members at water distribution sites. In one instance the caller, who works for the City of Flint, called the Fire Station to talk about the situation and was referred to 2-1-1. We understand there are two sides to these interactions and would like to handle them consistently and in an appropriate way. **Can the SEOC or National Guard provide guidance on handling concerns about residents' interactions with responders? RESOLUTION:** National Guard provided 2-1-1 a contact to report any issues. Jennie Pollak at Central Michigan 2-1-1 is the internal contact for collecting these reports, then forwarding them in a manner that protects the caller's confidentiality.
- ☐ **From 1/25/26:** Organizations distributing bottles to collect water samples report running out of bottles. **Is there a contact for individuals and organizations to get additional testing sample bottles?**

Shasta:

I just received confirmation that the bottles in the shipment were plastic, as ordered, and not glass as the packing slip stated. Please ask C&G to email the correct packing slip right away.

The packing list received yesterday said 40 ml containers; these are NOT what were ordered. We're working on getting an actual eyeball confirmation of bottles. See attached packing slip.

Subject: RE: Letter to convey lab results (Concerns from CHECC)

The CHECC has reviewed the DEQ Michigan Department of Environmental Quality Drinking Water Laboratory sample of the Official Laboratory Reports. We have several concerns as illustrated below:

TESTING INFORMATION	
Metal	**Result** **Parts Per Billion**
Copper	**90**
Lead	**7**

Should add (ppb)

What Your Results Mean:

If this cannot describe what the individual reported results mean, the word Your should be removed, because this is just general information

- "Not Detected" means tha ater
- The lowest number that th
- The lowest number that the lab reports for copper is 50 ppb

What is an Action Level? What does that mean in layman's terms? Is there something that the owner should do differently?

- The Action Level is the number that is used to help determine re
- The Action Level for Lead is 15 ppb
- The Action Level for Copper is 1,300 ppb

- No matter what your lead result is, you should continue to use a filter until the Public Health Emergency Declaration has been lifted.

Should this indicate an approved filter? A NSF approved filter? Should the filter just be used for drinking water or for all water?

Kathy

Hi Tara

Here is what we have for the bottle orders for Flint. Lisa H. was asked to check w Kirby to see if there was possibly still an order pending for Sci Spec that we haven't received yet, but I haven't heard back again as they were in a mangers meeting. I'm assuming this is a complete tally, plus what you have from VWR.

The Env Express charges will post through Carol's on the P card will have the Flint coding. We've been invoiced for all, but all charges have not yet posted on the CC in WORKS yet – just the first order.

All the attached Sci Specs invoices will need to be corrected to Flint coding (I'll process). Payment has been posted for the attached November and December payments only. I'm waiting for approvals for January invoices to process.

Let me know if questions. Thanks, Mary Jo

Good morning Mr. DeVriendt. I submitted e-mail below last week in an effort to reach out to your office. I know you must remain very busy at this time, but I'm hoping you had a chance to review the attached product summary information. Would it be possible to spend some time with you in your county office in Flint to go over any questions you and your team may have regarding our product? We truly believe our product could be very valuable to citizens in Flint as a viable source of more effective hydration than just bottled water during these tough times the city of Flint is going through. We can be in your office whatever date is more convenient to you...I appreciate your kind attention.

Thank you.

To: Chris DeVriendt, Emergency Management Homeland Security Division, Office of Genesee County Sheriff - Flint, Michigan

Good afternoon, our company Aqua Innovations has developed a very unique product Aqua-Gard® that provides effective human body hydration that has been clinically tested and proven. We believe our product could provide a very adequate and effective form of relief during the current unfortunate water emergency situation affecting the people of Flint, MI.

One packet of Aqua Gard®, replaces 5 typical water bottles and provides 3.5 to 4 hours of human body hydration without the need for drinking water. 1 million packets of Aqua-Gard® can provide 3.5 to 4 million hours of effective body hydration, replacing 5 million typical drinking water bottles.

Included in this message, I've attached a brief brochure of product information for your review.

We would like the opportunity to demonstrate our product to you and hope to contribute in alleviating current water emergency situation affecting the city of Flint, MI. We also left a voice message at your 810-257-3064 office number providing some of the information above. Also, you can find more information about our product at http://www.aquagardhydration.org/, or call me at our phone number below.

We can attend to an immediate meeting and product demo with you and your emergency management team at your earliest convenience. We look forward hearing from you.

Thank you.

From: Tom Page <tpage@uwmich.org>
Sent: Monday, January 25, 2016 8:13 PM
Subject: 2-1-1 Update Flint Water Response for Monday, January 25, 2016
Attachments: 2016-01-25 MI211 Flint Water Daily Update.docx

This is the daily 2-1-1 summary on the Flint Water Response for Monday, January 25, 2016

GENERAL INFORMATION:

- ☑ Thank you to the PIOs and DHHS partners who offered to discuss the growing public perception that 2-1-1 is a state agency and how the state is promoting 2-1-1 for the response. I will work to coordinate a meeting or conference call later this week.
- There are two major public meetings this week.
  - Tuesday, January 26 at 5pm the NAACP is holding a Public Mass Meeting at University of Michigan-Flint, Northbank Center, 432 N. SAGINAW STREET, FLINT, MI 48502. The meeting will be hosted by Cornell William Brooks, national NAACP President & CEO.
  - Wednesday, January 27 at 7pm MSNBC's Rachel Maddow will be hosting a broadcast town meeting at Brownell/Holmes STEM Academy, 6602 Oxley Dr., Flint. See link at http://www.mlive.com/news/flint/index.ssf/2016/01/what_to_know_about_rachel_madd.html.
- The Flint Water Plant reported it is receiving the results of lead tests and is compiling the results from up to 100 tests per day. Processing the results is labor intensive as it requires converting the lab data into parts-per-billion, then preparing letters to residents with the results.
  - Water samples submitted for testing take up to three (3) weeks to process. The department is telling the public it is a 30 day wait for results.
  - Many samples are submitted with incomplete contact information, requiring additional research to get results back to the resident.
  - Organizations distributing bottles to collect water samples report running out of bottles. Is there a contact for individuals and organizations to get additional testing sample bottles?
- There are reports that residents using the free Lifeline phones (also known as Obama phones)are having problems using the abbreviated 2-1-1 dialing code. The Michigan 2-1-1 State Office is trying to verify this. If there is a problem we will work with the Lifeline vendor to correct the issue. Anyone having difficulty reaching 2-1-1 can use the alternate toll-free number 1-844-875-9211.

CORRECTIONS AND CLARIFICATIONS

None today

CALL VOLUME:

Jennie Pollak, Central Michigan 2-1-1 Manager, was out sick today and was not able to provide a report on call volume and demand. While call numbers are not yet available, the vendor who provides the statewide call platform notified the Michigan 2-1-1 office that 85% of our incoming and outgoing lines were in use, an indicator that volume was again very high. This 85% threshold triggers close monitoring of the system by the 2-1-1 Technology Director who can turn on additional capacity if needed, ensuring that callers can still reach the 2-1-1 system. 2-1-1 continues to use the 'call-back' feature that allows caller to keep their place in the queue without holding on the line, then be contacted by the first available agent.

SPECIAL NEEDS/REQUESTS

- See above request for a contact to get sample bottles for residents to submit water for testing.
- SEOC is developing a standard form for 2-1-1 to use for water resource delivery requests. Once the format is standardized, Michigan 2-1-1 will work with one of our vendors to convert the this into an electronic form that will allow 2-1-1 agents to collect the callers needs and delivery information, then automatically send the individual requests in real-time to the contact responsible for managing deliveries.
- 2-1-1 has received several calls from individuals complaining about their interaction with National Guard members at water distribution sites. In one instance the caller, who works for the City of Flint, called the Fire Station to talk about the situation and was referred to 2-1-1. We understand there are two sides to these interactions and would like to

handle them consistently and in an appropriate way. Can the SEOC or National Guard provide guidance on handling concerns about residents' interactions with responders?

-
- 2-1-1 has received several questions from responders asking how we handle non-English speakers, as well as deaf/hard of hearing individuals.
    - There are a few 2-1-1 agents in the state system who are fluent in Spanish and Arabic. When these staff are available calls are routed to them. Otherwise, tele-interpreter services are available 24/7/365. It usually takes under one minute to connect with an interpreter in any of 180 languages.
    - 2-1-1 handles requests from deaf and hard of hearing individuals in several ways.
        - TDD/TTY is available at every center, but very few calls come in this way
        - 7-1-1 teleinterpreter is regularly used by callers to reach 2-1-1
        - Email is widely used as it allows direct communication between the deaf/hard of hearing person and the 2-1-1 agent
        - Live chat is available at most of the 2-1-1 partners which allows individuals to communicate directly and privately with a 2-1-1 agent in real-time

RUMOR CONTROL

- 2-1-1 is receiving calls from residents who are very confused and concerned about the statement from Attorney General Schuette that, "I would certainly not bathe a newborn or infant in Flint water". 2-1-1 contacted SEOC about how to respond and was informed the "Lead In Water" document circulated internally is the prime reference. . 2-1-1 agents have this document, but it does not appear to be available on the state's web site. Can the SEOC provide a link where we can refer callers to read the document, or give Michigan 2-1-1 permission to post it at MI211.org?
    - Hearing different messages from different state officials is causing concern and confusion for the public. Can PIOs provide any guidance as to how 2-1-1 should handle questions from callers about the reliability of information from these officials?
- 2-1-1 received a report that the e-tablets being used for real-time data tracking of water resource deliveries to homes have been taken away due to concerns that tracking data on the needs of homebound residents is a potential violation of HIPPA. Can the SEOC verify if this is correct? If so, who is working on a HIPPA-compliant process for tracking information on the needs of homebound residents and when is it expected to be available?
-

UNRESOLVED

- ☐ From 1/15/16: 2-1-1 is trying to identify a resource *to pick up* test kits from homebound/senior residents who cannot drop off test kits at designated sites. Possible Resolution: SEOC is considering inclusion of this need on the standard referral form mentioned above in the Special Needs/Requests section.
- ☐ *From 1/18/16: Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will* continue.
- ☐ From 1/18/16: One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?
- ☐ From 1/18/16: Callers are asking about shower heads that can filter water for bathing. 2-1-1 continues to receive reports of rashes attributed to bathing in unfiltered water.
- ☐ From 1/20/16: Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any properties are free from lead contamination. Is there are state agency or partner who can give real estate agency and home inspectors information on their potential liability.
- ☐ From 1/20/16: Another rumor reported is that Legionella can be aerosolized and inhaled if people boil water on the stove or use a humidifier to humidify the air in their homes. Can a health professional verify the risk of boiling Flint water or using it in an ultrasonic/cool mist humidifier?
- ☐ 1/21/16: Calls continue to increase regarding how to recycle empty water bottles. A recycling vendor contacted 2-1-1 and was referred to United Way of Genesee County. Does the City of Flint offer recycling? If not, what are the options for people to dispose of the empty plastic bottles?

Jen I have attached a copy of a Facebook posting and video of what someone said about our cannedwater4kids canned water we donated to Flint Michigan.

We are afraid that because the citizens are very emotional and don't really understand what the testing system really means that they think our water is unsafe to drink or cook with.

We really want to help but we don't want to cause you any more problems. I am afraid if we ship more canned water we will make things worse for you and Flint, MI.

The purpose of my 501c3 nonprofit lean E-charity has been built on ensuring that all children in the world have access to clean safe drinking water.

Thank you very much for your understanding and good help.

>
> I am working with Doug at ZeroWater (630-805-1773) to address the concerns and provide accurate information to the citizens regarding the capabilities of the meter. The citizens misinterpreted the elevated levels on the meter, presuming it meant there was elevated levels of lead in the metered water. These citizens have been informed the difference of the TDS meter and a laboratory analysis for lead and copper. I will be requesting Doug to also call the citizens to reiterate this. The citizens lack trust in any water they are provided and have been using the supplied TDS meters to test any bottled or canned water they have received from the city.

Kathy one of my team members asked is it possible for you to send us one of the testers that are being used in the home. Also, can you tell us who gave your citizens these testers and who is the manufacturer? We have contacts with University of Wisconsin Milwaukee labs and state certified testing. We would like them to re-test our water in cans that is from the same batch sent to your citizens and to test the accuracy of the tester being used.

Thank you very much.

From: Tom Page <tpage@uwmich.org>
Sent: Monday, January 25, 2016 10:01 AM
Subject: FW: 2-1-1 Update Flint Water Response for Friday, January 22, 2016
Attachments: 2016-01-22 MI211 Flint Water Daily Update.docx

My apologies for the delay in distributing the Friday update. I was traveling and had a problem getting an internet connection outside the office.
Tom

This is the daily 2-1-1 summary on the Flint Water Response for Friday, January 22, 2016

GENERAL INFORMATION:

- Based on State of Michigan references to "Call 211" in print and online media sources, many callers to the service think 2-1-1 is a state agency. This leads some to ask questions about potential bias in the information 2-1-1 is providing about the Flint water situation. The public understanding of 2-1-1 as an independent and impartial service is essential to maintaining our position as a trusted source of information with both the community at-large and state partners. **Michigan 2-1-1 would like to set up a call or meeting with the appropriate state representatives and some key stakeholders to standardize how the state publicizes the 2-1-1 service.**
- Central Michigan 2-1-1 has created a Drop Box folder for 2-1-1 agents taking Flint Water calls. It holds a four page master document that ensures updates and new information are immediately available to all 2-1-1 staff. It includes sections on Background Information (including President Obama's Emergency Declaration), Rumor Control, Health & Water Quality/Safety Concerns, the Taxonomy Terms 2-1-1 is using to provide referrals and track needs, a general Q&A section, and links to Printed Materials and online resources such www.helpforflint.com along with various flyers and statements on the response from State of Michigan.
    - If you have information or materials to include on the master document, please email them to jennifer.pollak@lifewayscmh.org, melissa.ladd-patnode@lifewayscmh.org, and tpage@uwmich.org.

CORRECTIONS AND CLARIFICATIONS
None today

CALL VOLUME:
Call volume continues to be higher than average, but is dropping from the Wednesday peak. Average wait time was down significantly to under 15 minutes during peak volume

- There was a brief period today when the queue for Flint water calls reached 20 callers. Central Michigan 2-1-1 contacted other regional 2-1-1 partners for assistance and was able to reduce the queue and wait time for Flint caller back down to approximately two minutes.

SPECIAL NEEDS/REQUESTS

- The lifting of the requirement to provide identification is making it easier for undocumented residents and residents without ID to access water resources. 2-1-1 working to verify whether the Hispanic Center will continue to provide access assistance for the residents.
- 2-1-1 continues to receive several calls a day from churches, nursing homes and business owners asking about filters for their establishments. They are being referred to the Chamber of Commerce to share the impact on their organizations.

RUMOR CONTROL

- No new rumors to report.

UNRESOLVED

- ☐ **From 1/15/16:** 2-1-1 is trying to identify a resource *to pick up* test kits from homebound/senior residents who cannot drop off test kits at designated sites.
- ☐ **From 1/18/16:** Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will continue.
- ☐ **From 1/18/16:** One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?
- ☐ **From 1/18/16:** Callers are asking about shower heads that can filter water for bathing. 2-1-1 continues to receive reports of rashes attributed to bathing in unfiltered water.
- ☐ **From 1/20/16:** Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any properties are free from lead contamination. **Is there are state agency or partner who can give real estate agency and home inspectors information on their potential liability.**

Thank you very much Jen.

I will send you UPS tracking info when we ship water to you.

We have many resources to help you in Milwaukee. Milwaukee Water Council & University of Wisconsin Milwaukee

Just let us know.

Greg

>
> I am working with Doug at ZeroWater (630-805-1773) to address the concerns and provide accurate information to the citizens regarding the capabilities of the meter. The citizens misinterpreted the elevated levels on the meter, presuming it meant there was elevated levels of lead in the metered water. These citizens have been informed the difference of the TDS meter and a laboratory analysis for lead and copper. I will be requesting Doug to also call the citizens to reiterate this. The citizens lack trust in any water they are provided and have been using the supplied TDS meters to test any bottled or canned water they have received from the city.

Importance: High

Kathy one of my team members asked is it possible for you to send us one of the testers that are being used in the home. Also, can you tell us who gave your citizens these testers and who is the manufacturer? We have contacts with University of Wisconsin Milwaukee labs and state certified testing. We would like them to re-test our water in cans that is from the same batch sent to your citizens and to test the accuracy of the tester being used.

Thank you very much.

Greg

Subject: Follow Up to Phone Conversation

Good Evening Mr. Stromberg,

Thank you for taking the time to speak to me on the phone tonight. I have contacted our representative of the Department of Environmental Quality and she said that you can ship a case of the canned water to our DEQ Laboratory at 3350 N. Martin Luther King Boulevard, Lansing, MI 48906. They will provide additional testing.

We appreciate your support and assistance with this issue.

Respectfully,

Kathy Wahl, BS, MSN, RN

Subject: WJRT TV Report - Town Hall Meeting in Flint Tuesday 2/2/2016

FYI, WJRT-TV is reporting there will be a Town Hall Meeting this Tuesday.

"

- "The Flint Water Crisis Town Hall" hosted by Metro-Detroit radio station 910 AM is happening Tuesday, February 2nd.

It's taking place at the Northbank Center Grand Ball Room on the campus[http://images.intellitxt.com/ast/adTypes/icon1.png]<http://www.abc12.com/home/headlines/Metro-Detroit-radio-station-bringing-water-town-hall-to-Flint-367134481.html#> of the University of Michigan- Flint.

Guests will include attorneys, pastors and community activists.
The public is invited to attend the free[http://images.intellitxt.com/ast/adTypes/icon1.png]<http://www.abc12.com/home/headlines/Metro-Detroit-radio-station-bringing-water-town-hall-to-Flint-367134481.html#> event.

Doors open at 7 p.m. and the town hall begins at 7:30 p.m.

The event will be broadcast on several media platforms[http://images.intellitxt.com/ast/adTypes/icon1.png]<http://www.abc12.com/home/headlines/Metro-Detroit-radio-station-bringing-water-town-hall-to-Flint-367134481.html#> including 910 AM, WDAL-TV 38 in Detroit and The Word Network- The source for urban ministries and gospel music.

DOYLE/RYDER ELEMENTARY SCHOOL

Outlet Sampling and Plumbing Assessment Recommendations

1040 Saginaw Street, Flint, Michigan 48503

DEQ

BACKGROUND INFORMATION

On Friday, November 6, 2015, the Department of Licensing and Regulatory Affairs (DLARA) and the Department of Environmental Quality (DEQ) conducted an assessment of the plumbing system at Doyle/Ryder Elementary School to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. The assessment identified the following potential sources of lead leaching into drinking water:

- Lead solder joints on copper piping
- Brass valves and brass fittings
- Brass components in fixtures
- Galvanized piping

The assessment also identified a total of 56 faucets or fountains that provide water for drinking, cooking and/or food preparation. The DEQ and the DLARA Team (Team) developed a sequence for sampling the faucets/fountains based on how water travels through the school building. Three of the 56 faucets/fountains were inoperable and could not be sampled, as follows:

- 02WC028 Northeast Building, 2nd Floor Common Area, Water Cooler, right
- 01WC045 Southwest Building Hallway near Room 110, Water Cooler
- 01WC046 Southwest Building Hallway near Room 110, Water Cooler

On Saturday, November 7, 2015, the DEQ and the DLARA Team (Team) completed sampling of the 53 operable faucets/fountains in the Doyle/Ryder Elementary School building in the order determined by the plumbing assessment from the previous day, following a stagnation period of over 12 hours. However, due to technical difficulties, sample results are not available for the bubbler fountain in Classroom 156 (01DW007). At each of the 52 faucets/fountains identified, the Team collected four samples. Two initial, 125-milliliter samples (P1 and P2), were collected immediately after turning on the tap. The water was then flushed for 30 seconds and a third, 125-milliliter sample (F01) was collected. Finally, the water was flushed for another two minutes, and the fourth 125-milliliter sample (F02) was collected. These samples were used to determine the impact of any lead sources in and around each specific faucet/fountain and its connecting plumbing.

The Team then completed consecutive sampling at six of the 52 faucets/fountains in the Doyle/Ryder Elementary School building. This consecutive sampling was used to determine the impact of any lead sources located deep in the supply plumbing of the school building. The six sites comprised of three sites associated with each of the two cold water supply lines; one site near the building service line, one site near the plumbing mid-point, and one site at the far end of the plumbing system. At each of these six sites, the Team collected 10, 1-liter samples. The 10 samples were collected immediately after turning on the tap, and consecutively, without any flushing time in between.

WATER SERVICE INFORMATION

A four-inch diameter cast iron water service line enters the school in the first floor mechanical room by the northeast wall, in the newer building on the northeast side of the school. Piping in the mechanical room transitions into copper piping with lead solder joints for cold water lines. Two separate copper cold water supply lines exit the mechanical room. A two-inch diameter line through the southeast wall appears to serve open classroom and bathroom fixtures on the first and second floors of the newer building on the northeast side of the school. A separate three-inch diameter line exits the southwest wall and appears to serve a first floor locker room and second floor special education rooms (260 and 262) in the newer building, then continues over to serve fixtures on all three floors of the older building on the southwest side of the school. Copper piping with lead solder joints continue to branch off of the copper supply lines. Hot water is distributed in continuous loops that feed from and return to a central water heater in the mechanical room. Hot water piping material, where exposed, is copper piping with lead solder joints. Brass valves are throughout the building.

Outlets with Lead Levels Greater Than 15 Parts per Billion

The DEQ recommends school facilities take action if samples from any drinking water outlets show lead levels greater than 15 parts per billion. Based on the sampling conducted at 52 faucets/fountains on November 7, 2015, the following 21 drinking water outlets had lead water level results greater than 15 parts per billion. Each of these 21 outlets is listed below with its sample results, including a description of the potential source(s) of lead, and recommended actions to be taken by the school.

Outlet: Sink Faucet (01CF003)

Location: Classroom 160
Results: P1=8 parts per billion, P2=26 parts per billion
F01=1 part per billion, F02=1 part per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink may contain additional brass components.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (02CF019)

Location: Classroom 258
Results: P1=10 parts per billion, P2=24 parts per billion
F01=2 parts per billion, F02=1 part per billion

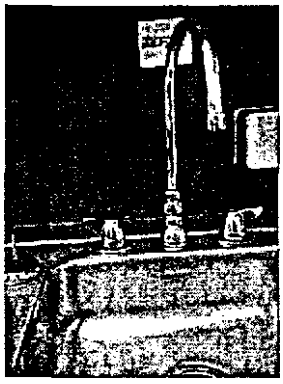
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink may contain additional brass components.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

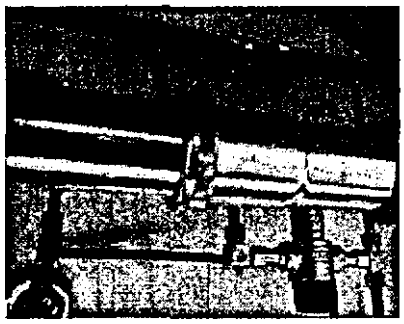
This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (02CF021)

Location: Classroom 257
Results: P1=17 parts per billion, P2=18 parts per billion
F01=2 parts per billion, F02=1 part per billion



These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink contains some additional brass components.

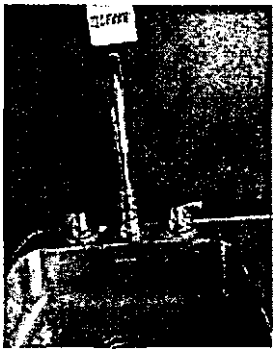


Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (01CF008)

Location: Classroom 156
Results: P1=11 parts per billion, P2=35 parts per billion
F01=4 parts per billion, F02=2 parts per billion



These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink may contain additional brass components.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (01CF018)

Location: Classroom 155
Results: P1=9 parts per billion, P2=16 parts per billion,
F01=3 parts per billion, F02=3 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink contains some additional brass components.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead and exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Water Cooler Fountain (01WC005)

Location: Hallway, Outside Bathroom
Results: P1=12 parts per billion, P2=15 parts per billion
F01=16 parts per billion, F02=4 parts per billion

These results suggest the highest contribution of lead may be from the water cooler unit. The water cooler is an Elkay brand. This cooler contains some brass components. Connecting plumbing to the cooler unit may also contain brass components.

Replacement of the entire unit is recommended and will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (02DW029)

Location: Classroom 254
Results: P1=23 parts per billion, P2=52 parts per billion
F01=2 parts per billion, F02=1 part per billion

These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass and has a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials *will significantly reduce lead exposure at this location. If replacement is not currently feasible,* sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (02CF030)

Location: Classroom 254
Results: P1=13 parts per billion, P2=17 parts per billion,
F01=2 parts per billion, F02=2 parts per billion

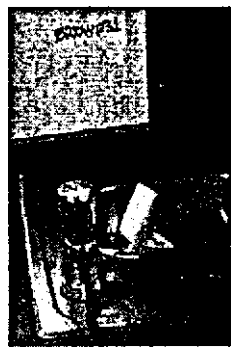
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink contains some additional brass components.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (02DW031)

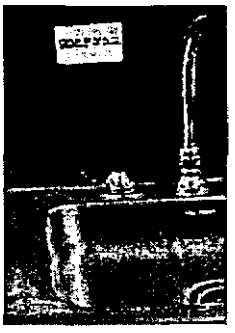
Location: Classroom 253
Results: P1=25 parts per billion, P2=41 parts per billion
F01=2 parts per billion, F02=2 parts per billion



These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass and has a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink should be checked for brass components and copper piping with lead solder.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet Right (02CF032)



Location: Classroom 253
Results: P1=15 parts per billion, P2=20 parts per billion
F01=3 parts per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink contains some additional brass components.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (02DW033)

Location: Classroom 252
Results: P1=11 parts per billion, P2=16 parts per billion
F01=2 parts per billion, F02=2 parts per billion

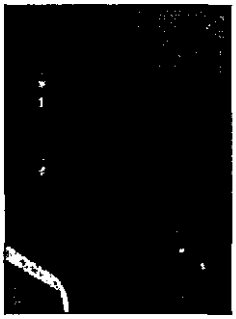
These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. Parts of this bubbler fixture are made of brass, with a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink is partly made up of brass connectors, copper piping with lead solder, and a brass shut-off valve.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (02CF039)

Location: Classroom 260
Results: P1=341 parts per billion, P2=349 parts per billion
F01=66 parts per billion, F02=14 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The base of this faucet is chrome-plated brass, with a brass connection on the underside of the sink. Hot and cold water lines connect to this faucet with a brass mixer fitting under the sink. Connecting plumbing in the cabinet under the sink also contains additional brass connectors, copper plumbing with lead solder, and brass valves.



Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

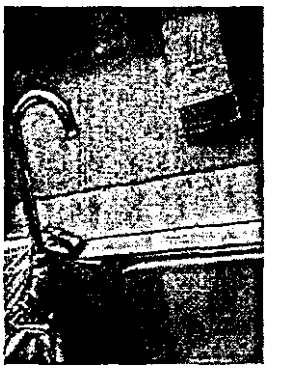
Outlet: Bubbler Fountain (02DW040)

Location: Classroom 260
Results: P1=85 parts per billion, P2=29 parts per billion
F01=18 parts per billion, F02=15 parts per billion

These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass connector on the underside of the sink. Connecting plumbing in the cabinet under the sink is made up of brass connectors, copper piping with lead solder, and a brass shut-off valve.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (02CF041)



Location: Classroom 262
Results: P1=340 parts per billion, P2=132 parts per billion
F01=16 parts per billion, F02=8 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. The base of this faucet is chrome-plated brass, with a brass connection on the underside of the sink. Hot and cold water lines connect to this faucet with a brass mixer fitting under the sink. Connecting plumbing in the cabinet under the sink also contains additional brass connectors, copper plumbing with lead solder, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Drinking Fountain (02DW042)

Location: Classroom 262
Results: P1=44 parts per billion, P2=11 parts per billion
F01=9 parts per billion, F02=6 parts per billion

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is made of chrome-plated brass, with a brass connection on the underside of the unit. The connecting piping to the unit also contains some brass components, including brass fittings, and a brass valve.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bathroom Faucet (01KC044 Alternate)

Location: Principal Office Bathroom
Results: P1=48 parts per billion, P2=30 parts per billion
F01=3 parts per billion, F02=2 parts per billion

Faucet 01KC044 was not accessible during sampling on November 7, 2015. Instead, an alternate faucet in the adjacent bathroom was sampled. This faucet is not used for drinking or cooking and an assessment was not completed on the fixture or its connecting plumbing.

The results for this location suggest the highest contributions of lead may be from the faucet and its connecting plumbing. Replacement of this fixture and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location if it is ever used for drinking or cooking. If replacement is not feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Kitchen Sink Faucet (02KC052)

Location: Teachers' Lounge
Results: P1=11 parts per billion, P2=20 parts per billion
F01=6 parts per billion, F02=1 part per billion

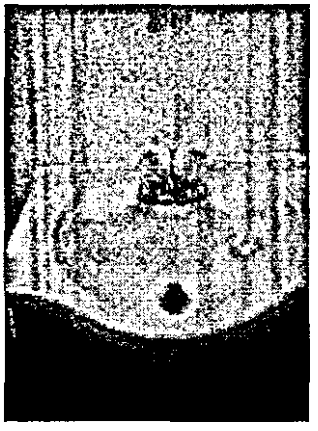
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Delta 350 model faucet. This style faucet has a single-handle mixing valve that may allow mixing of hot and cold water. Connecting plumbing for this faucet should be checked for additional lead-containing components, including brass fittings and brass valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (01CF047)

Location: Classroom 111
Results: P1=22 parts per billion, P2=3 parts per billion
F01=2 parts per billion, F02=non-detect



These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet may contain brass components. Connecting plumbing for this faucet should be checked for additional lead-containing components, including brass fittings and brass valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If *replacement is not currently feasible, sample results indicate that flushing this* tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet Left (01KC048)

Location: Classroom 110, North Wall
Results: P1=21 parts per billion, P2=23 parts per billion
F01=5 parts per billion, F02=5 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Moen brand faucet. The base deck of this faucet contains brass components. This style faucet also has a single-handle mixing valve that may allow mixing of hot and cold water. Connecting plumbing for this faucet should be checked for additional lead-containing components, including brass fittings and brass valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet Right (01KC049)

Location: Classroom 110, North Wall
Results: P1=11 parts per billion, P2=21 parts per billion
F01=4 parts per billion, F02=10 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Moen brand faucet. The base deck of this faucet contains brass components. This style faucet also has a single-handle mixing valve that may allow mixing of hot and cold water. Connecting plumbing for this faucet should be checked for additional lead-containing components, including brass fittings and brass valves.

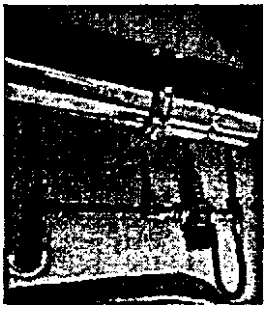
Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Sink Faucet (02CF026)

Location: Classroom 259
Results: P1=74 parts per billion, P2=15 parts per billion
F01=2 parts per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This appears to be a Chicago Specialty brand faucet. Faucet and operating handle connections on the underside of the sink contain brass fittings and a brass tee. Other connecting plumbing in the cabinet under the sink contains some additional brass components.



Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlets with Lead Levels 15 Parts per Billion or Less

While the remaining 31 outlets tested showed sample results to be at levels requiring no further action, several recommendations have been identified.

The fourth sample (F02) at all 52 outlets sampled – following approximately three minutes of use and flushing at a reduced flow – resulted in reduced lead concentrations of 15 parts per billion or less. This indicates that flushing of all taps used for drinking, cooking, and/or food preparation for four minutes following periods of stagnation will further reduce lead exposure. It is recommended that an operational flushing procedure be developed for use by staff responsible for plumbing operations and maintenance.

Twenty-five of these 31 outlets are comprised of similar materials as the outlets listed above and could potentially experience higher lead levels under extended periods of stagnation. In addition, three of the four outlets not tested or having no results are also comprised of similar materials. These faucets/fountains include:

- Bubbler Drinking Fountains: Classroom 159 (01DW002), Classroom 160 (01DW004), Classroom 258 (02DW020), Classroom 257 (02DW022), Classroom 155 (01DW017), Classroom 154 (01DW010), Classroom 153 (01DW011), Classroom 251 (02DW035), Classroom 152 (01DW013), Classroom 151 (01DW015), Classroom 256 (02DW023), Classroom 259 (02DW025), and Classroom 156 (01DW007 – No Sample Results).

- Sink Faucets: Classroom 159 (01CF001), Classroom 154 (01CF009), Classroom 153 (01CF012), Classroom 252 (02CF034), Classroom 251 (02CF036), Classroom 152 (01CF014), Classroom 151 (01CF016), and Classroom 256 (02CF024).

- Water Coolers: First Floor, Hallway, near Bathrooms (01WC006); Second Floor, Hallway, Right of Elevator (02WC050 and 02WC051); Third Floor, Hallway, Right of Elevator (03WC053 and 03WC054); and by Room 110 (01WC045 and 01WC046 – Both Did Not Test).

Replacement of these fixtures with lead-free materials is also recommended.

The Water Cooler in the Northeast Building, 2nd Floor Common Area (02WC028) was out of service and should be sampled prior to placing the unit back into service, or replaced.

The remaining six outlets showed sample results of 15 parts per billion or less, requiring no further action or additional recommendations. These faucets/fountains include:

- Kitchen Faucets: Third Floor Kitchen (03KC055 and 03KC056).

- Bubbler Fountains: Gym (01DW037 and 01DW038).

- Water Coolers: Main Hallway (01WC043), and by the Second Floor Bathrooms (02WC027).

Consecutive Sampling Results and Building Plumbing Recommendations

The consecutive samples taken on November 7, 2015, at six sites in the Doyle/Ryder Elementary School building provide additional confirmation that the highest contribution of lead appears to be from the individual faucet/fountains and not from the larger diameter supply plumbing within the school building. However, results from Classroom 260 also suggest that the copper line with lead solder joints serving classrooms 260 and 262 may contain more stagnant water as these rooms have not been in use. An operational flushing procedure may further reduce lead contributions from this supply line caused by stagnant conditions related to its use. Results of the consecutive sample monitoring are listed in the table below.

Consecutive Sample No.	1	2	3	4	5	6	7	8	9	10
LOCATION	LEAD RESULT (PARTS PER BILLION; ND = NOT-DETECTED)									
Classroom 159 Sink Faucet (01CF001))	5	1	ND	ND	ND	ND	ND	ND	ND	ND
Classroom 155 Sink Faucet (01CF018)	8	3	3	2	2	2	2	2	2	2
Classroom 254 Sink Faucet (02CF030)	13	3	2	2	2	2	2	2	1	1
Classroom 260 Sink Faucet (02CF039)	186	35	15	12	11	11	10	10	10	9
Teachers' Lounge Kitchen Faucet (02KC052)	6	3	4	2	1	1	ND	1	ND	ND
Classroom 110 Sink Faucet (01KC049)	10	11	11	11	10	9	9	7	6	5

Flint Drinking Water Response Plan
DRAFT – January 24, 2016

1. **Implement Actions in Accordance with the Safe Drinking Water Act and EPA Administrative Order**
   The Michigan Department of Environmental Quality (DEQ) will work cooperatively with the United States Environmental Protection Agency (EPA) and the City of Flint to implement the department's duties under the Safe Drinking Water Act and the EPA Administrative Order issued on January 21, 2016.

2. **Establish Criteria for Safe Drinking Water**
   The DEQ will coordinate with all partners, including the Department of Health and Human Services (DHHS), the City of Flint, Genesee County Health Department, EPA, and others, to determine what criteria are needed in order to declare the water in Flint safe.

3. **Complete Sampling of Highest Priority Homes**
   Dr. Mona Hanna-Attisha identified zip codes 48503 and 48504 as having the greatest risk for lead exposure. Two hundred geographically dispersed locations with emphasis on homes consisting of children under six, pregnant women, and the elderly within those zip codes will be identified. Training on how to properly pull a sample will be provided by Flint Drinking Water Sampling Teams. The teams will visit the 200 hundred sites once every two weeks for two months (February – March) to pick up samples, ensure the process is going smoothly, and verify integrity of the samples.

4. **Assure Access to Sampling for All Flint Residents**
   While the Flint Drinking Water Sampling Teams will be focused on the highest priority homes, additional sampling will be provided to all residents. Sampling bottles are available at Points of Distribution, including fire stations and city hall. Residents are encouraged to obtain a bottle and return the sample to the Points of Distribution. Residents will then receive an Official Laboratory Report, indicating whether or not lead or copper were detected in their water. The addresses of the Points of distribution can be found at www.michigan.gov/flintwater or residents can call 211 for more information.

5. **Monitor Blood Levels of Residents in High Priority Homes**
   Based on agreement from the residents, blood level testing will occur by Department of Health and Human Services (DHHS) or the Genesee County Health Department. The blood level testing will occur in conjunction with the first,

second, and fourth samples of water testing. Analysis of the data will be conducted by DHHS, and additional services will be provided to any individuals with elevated blood lead levels. In the event elevated blood lead levels are identified in the residents of the priority homes, DEQ and DHHS will partner to develop a sampling plan for additional homes adjacent to the homes of residents with elevated levels.

6. **Inventory City of Flint Lead Service Lines**
   The DEQ will work with an independent contractor to prepare a comprehensive inventory of the lead service lines in Flint.

7. **Replace Faucets at Schools and Other Public Locations**
   Lead service lines, fixtures, and lead solder are the primary sources of lead contamination within schools. While no lead service lines have been identified in the Flint Public Schools, the Michigan Department of Licensing and Regulatory Affairs will be working in conjunction with the DEQ to replace all problematic fixtures in Flint's 200 public schools, daycares, and other places of congregation. This action will decrease the potential risk of lead exposure.

8. **Test Drinking Water Distribution System**
   The DEQ is coordinating with the City of Flint on weekly testing of the drinking water distribution system to determine if there are any issues with lead occurring within the system.

9. **Verify Lab Results**
   All residential, school, distribution system, and other tests will be completed at the DEQ laboratory. The DEQ Lab is EPA certified. In addition, a random set of samples will be split and samples will be analyzed by the National Science Foundation (NSF) to help validate the results generated.

10. **Publish Test Results Electronically**
    The DEQ will provide weekly updates of the test results at www.michigan.gov/flintwater.

11. **Continue Coordination with the City of Flint**
    The DEQ and other state agencies will continue to meet with the City of Flint at least weekly to identify any additional actions needed.

HOLMES STEM ACADEMY

Outlet Sampling and Plumbing Assessment Recommendations

6602 Oxley Drive, Flint, Michigan 48504

DEQ

BACKGROUND INFORMATION

On Friday, December 11, 2015, the Department of Licensing and Regulatory Affairs (DLARA) and the Department of Environmental Quality (DEQ) conducted an assessment of the plumbing system at Holmes STEM Academy to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. The assessment identified the following potential sources of lead leaching into drinking water:

- Lead solder joints on copper piping
- Brass valves and brass fittings
- Brass components in fixtures
- Galvanized piping

The assessment also identified a total of 44 faucets or fountains that provide water for drinking, cooking and/or food preparation. One fountain was not assessed. The DEQ and the DLARA Team (Team) developed a sequence for sampling the faucets/fountains based on how water travels through the school building.

On Saturday, December 12, 2015, the Team completed sampling of 43 faucets/fountains in the Holmes STEM Academy in the order determined by the plumbing assessment from the previous day, following a stagnation period of over 12 hours. At each of the 43 faucets/fountains identified, the Team collected four samples. Two initial, 125-milliliter samples (P1 and P2), were collected immediately after turning on the tap. The water was then flushed for 30 seconds and a third, 125-milliliter sample (F01) was collected. Finally, the water was flushed for another two minutes, and the fourth 125-milliliter sample (F02) was collected. These samples were used to determine the impact of any lead sources in and around each specific faucet/fountain and its connecting plumbing.

One fountain was out of service and could not be sampled:

- Bubbler fountain in Green Hallway near Girls Bathroom (No Site Code)

The Team then completed consecutive sampling at five of the 43 faucets/fountains in the Holmes STEM Academy. This consecutive sampling was used to determine the impact of any lead sources located deep in the supply plumbing of the school building. The five sites comprised of one site near the building service line, one site near the mid-point of the supply line, and three sites representing end points of the supply line in various corridors of the school. At each of these five sites, staff collected 10, 1-liter samples. The 10 samples were collected immediately after turning on the tap, and consecutively, without any flushing time in between.

WATER SERVICE INFORMATION

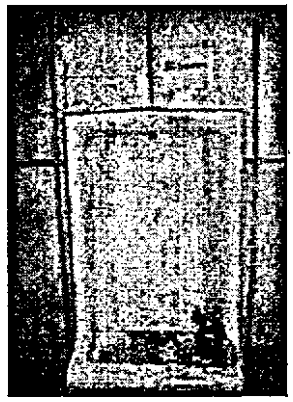
A six-inch diameter cast iron water service line enters the boiler room. The boiler room is located on the south side of the building. A three-inch galvanized water supply line runs from the meter. Three cold water supply lines exit the boiler room. One line serves areas by the gymnasium and auditorium on the east side of the school, a second line serves the kitchen and cafeteria areas, and a third line runs through a tunnel to supply the remaining parts of the school. Within the tunnel, this supply line reduces to two and one-half inch diameter copper pipe.

Outlets with Lead Levels Greater Than 15 Parts per Billion

The DEQ recommends school facilities take action if samples from any drinking water outlets show lead levels greater than 15 parts per billion. Based on the sampling conducted at 43 faucets/fountains on December 12, 2015, 14 drinking water outlets had lead water level results greater than 15 parts per billion. Listed below are those 14 outlets plus an additional outlet, due to the drinking fountain configuration. These 15 outlets are listed below with their sample results, including a description of the potential source(s) of lead, and recommended actions to be taken by the school.

Outlet: Bubbler Fountain (01DW001)

Location: Boys Locker Room, North Wall
Results: P1= 17 parts per billion, P2= 12 parts per billion
F01= 5 parts per billion, F02=5 parts per billion

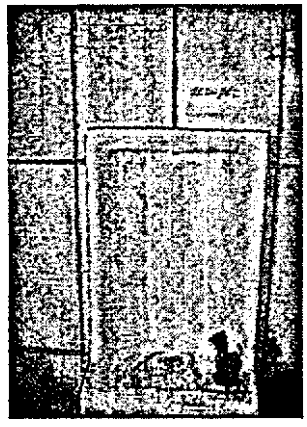


These results suggest the highest contribution of lead may be from the bubbler itself. The bubbler is chrome-plated brass. The connecting piping to the unit also contains some brass components, including brass fittings and a brass valve.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW002)

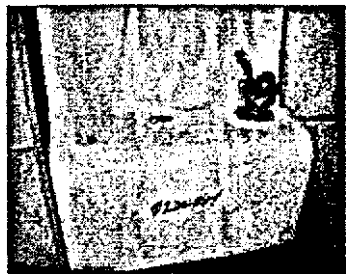
Location: Girls Locker Room, South Wall
Results: P1= 18 parts per billion, P2=9 parts per billion
F01=9 parts per billion, F02=4 parts per billion



These results suggest the highest contribution of lead may be from the bubbler itself. The bubbler is chrome-plated brass. The connecting piping to the unit also contains some brass components, including brass fittings and a brass valve.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW004)



Location: Hallway Across from Girls Locker Room, West Side
Results: P1=16 parts per billion, P2=4 parts per billion,
F01=3 parts per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the bubbler itself. The bubbler is chrome-plated brass. The connecting piping to the unit also contains some brass components, including brass fittings and a brass valve.

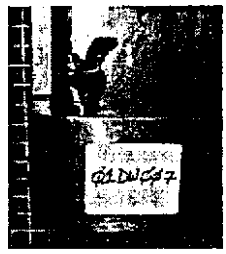
Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountains (01DW006, 01DW007, 01DW008, 01DW009)

Location: Cafeteria, South Wall

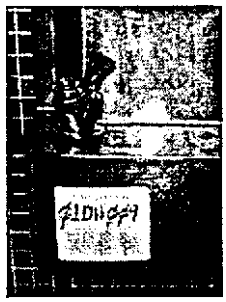
01DW006
Results: P1= 22 parts per billion, P2=20 parts per billion
F01=5 parts per billion, F02=4 parts per billion

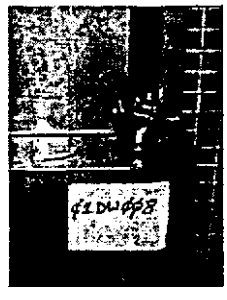
01DW007
Results: P1=15 parts per billion, P2=5 parts per billion
F01=4 parts per billion, F02=4 parts per billion



01DW008
Results: P1=47 parts per billion, P2=8 parts per billion
F01=6 parts per billion, F02=17 parts per billion

01DW009
Results: P1=22 parts per billion, P2=16 parts per billion
F01=13 parts per billion, F02=8 parts per billion



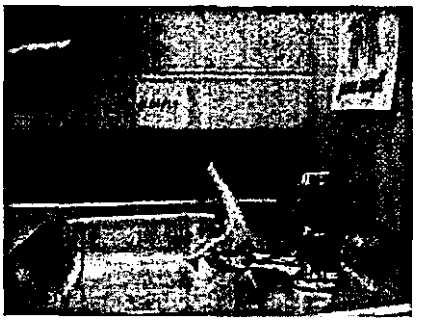


These results suggest that while the highest contribution of lead may be from the bubblers themselves, sample F02 for bubbler 01DW008 shows additional sources of lead deeper within the supply plumbing. The bubblers are all constructed of chrome-plated brass. Connecting plumbing contains brass connections, brass fittings, brass shut-off valves, and copper piping with lead solder.

Replacement of these bubblers and their connecting plumbing will significantly reduce lead exposure at this location. Further investigation of the supply plumbing in this area is also recommended. If investigation

and replacement is not currently feasible, **SHUT OFF THESE BUBBLER FOUNTAINS AND DO NOT USE *FOR DRINKING OR COOKING.***

Outlet: Bubbler Fountain (01DW014)

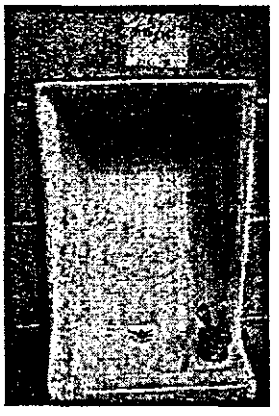


Location: Room B109, West Wall
Results: P1=18 parts per billion, P2=2 parts per billion
F01=non-detect, F02=non-detect

These results suggest the highest contribution of lead may be from the bubbler itself. The bubbler is constructed of chrome-plated brass, with a brass connection on the underside of the sink. The connecting piping to the unit also contains some brass fittings.

Replacement of this bubbler with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW018)

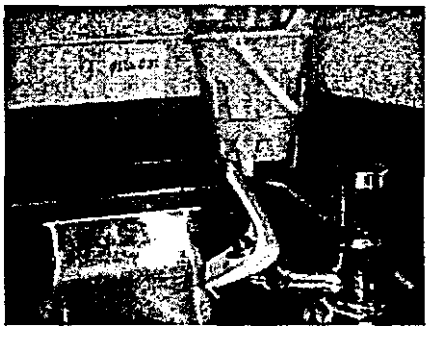


Location: Room B102, North Side of Room
Results: P1=59 parts per billion, P2=35 parts per billion
F01=20 parts per billion, F02=4 parts per billion

These results suggest the highest contribution of lead may be from the bubbler itself. The bubbler is chrome-plated brass. The connecting piping to the unit also contains some brass components, including brass fittings and a brass valve.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW31)

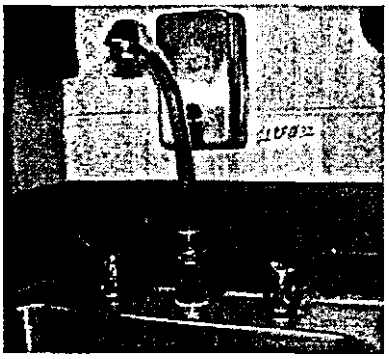


Location: Community Room, West Wall
Results: P1=19 parts per billion, P2=77 parts per billion
F01=4 parts per billion, F02=3 parts per billion

These results suggest the highest contribution of lead may be from the bubbler and its connecting plumbing. The bubbler is constructed of chrome-plated brass and has a brass connection on the underside of the sink.

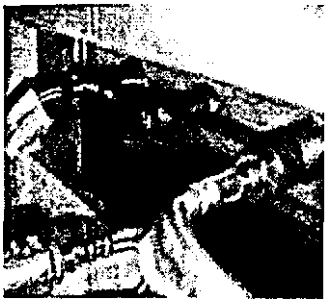
Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF32)



Location: Community Room, West Wall
Results: P1=34 parts per billion, P2=15 parts per billion
F01=4 parts per billion, F02=4 parts per billion

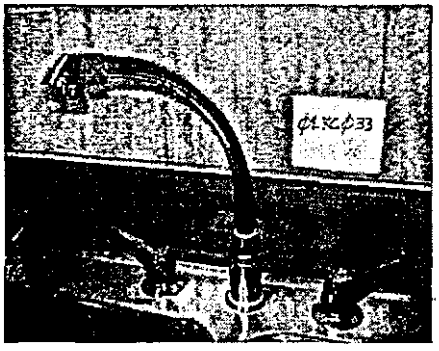
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet is an Elkay model that contains a brass mixer fitting on the underside of the sink to connect hot and cold water lines.



Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Kitchen Faucet (01KC033)



Location: Community Room, South Wall
Results: P1= 700 parts per billion, P2=181 parts per billion
F01=10 parts per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet is an Elkay model, with a brass mixer fitting on the underside of the sink to connect hot and cold water lines.

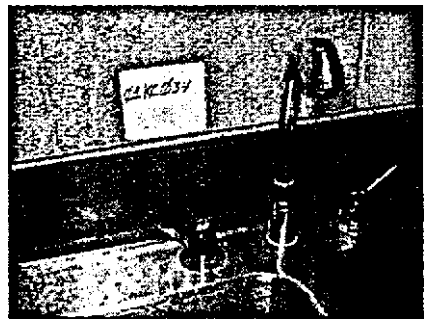
Copper results for sample P2 at this location were also at levels above which the DEQ recommends school facilities take action. Copper results suggest these same brass components are contributing to this condition.

Replacement of this faucet and its connection plumbing with lead-free materials will significantly reduce lead and copper exposure at this location. If replacement is not currently feasible, sample results indicate

that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Kitchen Faucet (01KC34)



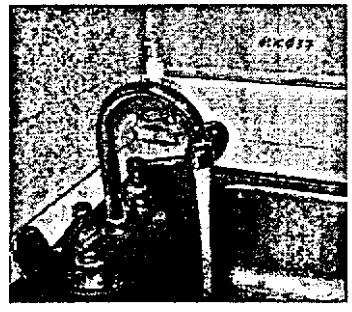
Location: Community Room, South Wall
Results: P1=21 parts per billion, P2=10 parts per billion
F01=3 parts per billion, F02=1 part per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet is an Elkay model, with a brass mixer fitting on the underside of the sink to connect hot and cold water lines.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Kitchen Faucet (01KC037)



Location: Supply Room, North of Community Room, East Wall
Results: P1= 32 parts per billion, P2=31 parts per billion
F01=8 parts per billion, F02=2 parts per billion

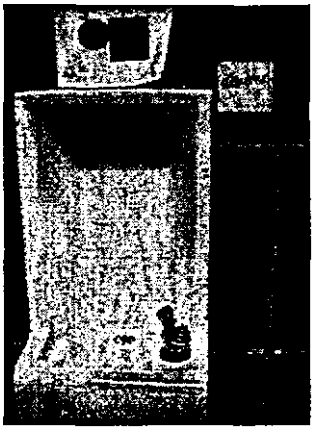
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The connecting piping to the unit also contains some brass components.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW042)

Location: Off of Green Hall, next to Boys Restroom
Results: P1=24 parts per billion, P2=17 parts per billion
F01=4 parts per billion, F02=3 parts per billion



These results suggest the highest contribution of lead may be from the bubbler itself. The bubbler is chrome-plated brass. The connecting piping to the unit also contains some brass components, including brass fittings and a brass valve.

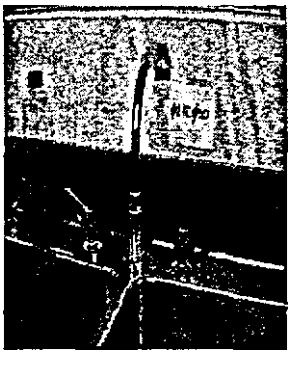
Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlets with Copper Levels Greater Than 1.3 Parts per Million

The DEQ recommends school facilities take action if samples from any drinking water outlets show copper levels greater than 1.3 parts per million. Based on the sampling conducted at 43 faucets/fountains on December 12, 2015, the following two additional drinking water outlets had copper water level results greater than 1.3 parts per million, but lead water level results less than 15 parts per billion. These outlets are listed below with their copper sample results, including a description of the potential source(s) of copper, and recommended actions to be taken by the school.

Outlet: Kitchen Faucet (01KC010)

Location: Room B110, East Wall
Results: P1=0.16 parts per million, P2=1.32 parts per million
F01=0.09 parts per million, F02=0.07 parts per million



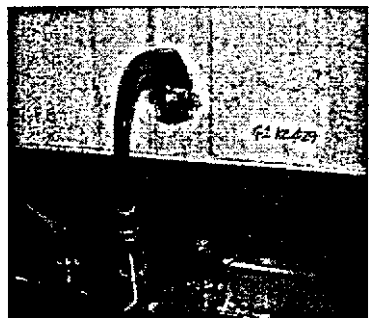
These results suggest the highest contribution of copper may be from the faucet and its connecting plumbing. This faucet is an Elkay model that contains a brass mixer fitting on the underside of the sink to connect hot and cold water lines. Copper results suggest these brass components are contributing to this condition.

Replacement of this faucet and its connecting plumbing is recommended and will reduce copper exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for

three minutes following periods of stagnation is likely to reduce copper concentrations and copper exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Kitchen Faucet (01KC029)



Location: Room B114, East Wall
Results: P1=0.13 parts per million, P2=1.66 parts per million
F01=0.10 parts per million, F02=non-detect

These results suggest the highest contribution of copper may be from the faucet and its connecting plumbing. This faucet is an Elkay model, with a brass mixer fitting on the underside of the sink to connect hot and cold water lines. Copper results suggest these brass components are contributing to this condition.

Replacement of this faucet and its connecting plumbing is recommended and will reduce copper exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce copper concentrations and copper exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlets with Lead Levels 15 Parts per Billion or Less

While the remaining 26 outlets showed sample results to be at levels requiring no further action for lead or copper, several recommendations have been identified.

The fourth sample (F02) at all 26 outlets – following approximately three minutes of use and flushing at a reduced flow – resulted in reduced lead concentrations four parts per billion or less. This indicates that flushing at these taps used for drinking, cooking, and/or food preparation for four minutes following periods of stagnation will further reduce lead exposure. It is recommended that an operational flushing procedure be developed for use by staff responsible for plumbing operations and maintenance with emphasis on flushing after weekends and holidays.

Twenty-one of these 26 outlets are comprised of similar materials as the outlets listed above and could potentially experience higher lead levels under extended periods of stagnation. These faucets/fountains include:

- Bubbler Fountains: Hallway across Girls Locker Room (01DW003), Room B110 (01DW012), Room B102 (01DW019), Room B105 (01DW023), Room B114 (01DW027), Hallway across Community Room (01DW035), Yellow Hall near Girls Restroom (01DW038), and Red Hall near Boys Restroom (01DW039).

- Classroom Faucets: Room B110 (01CF013), Room B109 (01CF015), Room B102 (01CF020), Room B105 (01CF024), and Room B114 (01CF028).

- Kitchen Faucets: Room B110 (01KC011), Room B109 (01KC016), Room B109 (01KC017), Room B102 (01KC021), Room B102 (01KC022), Room B105 (01KC025), Room B105 (01KC026); and Room B114 (01CF030).

Replacement of these fixtures with lead-free materials is also recommended.

The bubbler fountain in the Green Hallway near the Girls Bathroom, identified at the beginning of this document as out of service should be sampled prior to placing the unit back into service, or replaced with lead-free materials.

The remaining five outlets showed sample results of 15 parts per billion or less, requiring no further action or additional recommendations.

- Kitchen Faucet: Kitchen next to cafeteria, South Wall (01KC005), and Main Office, East Wall (01KC036)

- Water Coolers: Red Hall, East Wall (01WC040 and 01WC041); and Blue Hall, East Wall (01WC043)

Consecutive Sampling Results and Building Plumbing Recommendations

The consecutive samples taken on December 12, 2015, at five sites in the Holmes STEM Academy to provide additional confirmation that the highest contribution of lead appears to be from the individual faucet/fountains and not from the larger diameter supply plumbing within the school building.

An operational flushing procedure may further reduce lead contributions from this supply line caused by stagnant conditions related to its use. Routine flushing of the plumbing that branch of the larger diameter main line (for example in the Cafeteria, the Community Room and Supply Room) should be performed on a regular basis. Even if the identified outlets are replaced, the cafeteria, community room and supply room outlets may still benefit from a flushing procedure to further reduce lead contributions and other effects of stagnant water in this cold water line.

Results of the consecutive sample monitoring are listed in the table below.

Consecutive Sample No.	1	2	3	4	5	6	7	8	9	10
LOCATION	LEAD RESULT (PARTS PER BILLION; ND = NOT-DETECTED)									
Kitchen Kitchen Faucet (01KC005)	2	3	ND	ND	ND	ND	ND	ND	ND	ND

Report To: MSP-EOC-MDEQ

System Name/Owner:	CANNED WATER 4 KIDS	WSSN/Pool ID:		
Collection Address:	5931 WESTERN,	Source:	Other	
Collected By:		Site Code:		
Township/Well#/Section:	//	Collector:	Other	
County:	Lab	Date Collected:	01/19/2016	17:40
Sample Point:		Date Received:	01/19/2016	17:42
Water System:	Other	Purpose:	Other	

Sample Comment **LG00645** **This sample was received as a sealed container of finished drinking water. It was opened on 1/19/16 and an aliquot was transferred to a 125 mL laboratory bottle for analysis (Unit 32CC).**

TESTING INFORMATION			REGULATORY INFORMATION			
Analyte Name	Result (mg/L)	Date Tested	RL (mg/L)	MCL/AL (mg/L)	Method	CAS #
Copper	Not detected	01/20/2016	0.05	1.3	EPA 200.8	7440-50-8
Lead	Not detected	01/20/2016	0.001	0.015	EPA 200.8	7439-92-1

The analyses performed by the MDEQ Drinking Water Laboratory were conducted using methods approved by the U.S. Environmental Protection Agency in accordance with the Safe Drinking Water Act, 40 CFR parts 141-143, and other regulatory agencies as appropriate.

Your local health department has detailed information about the quality of drinking water in your area. If you have concerns about the health risks related to the test results of your sample, please contact the Environmental Health Section through the address and telephone number listed below:

CAS# : Chemical Abstract Service Registry Number
MCL : Maximum Contaminant Level
AL : Action Level
RL : Reporting Limit

mg/L : milligrams / Liter (ppm)
ppm : parts per million
MPN : Most Probable Number
CFU : Colony Forming Unit

Note: Results of "Not Detected" have been converted to a numerical value of zero to allow for ease of sorting.
Results in RED exceed 15 ppb for lead or 1.3 ppm for Copper
1 ppb = 0.001 mg/L

County:	Lab	Date Collected:	01/19/2016	17:40
Sample Point:		Date Received:	01/19/2016	17:42
Water System:	Other	Purpose:	Other	

Sample Comment **LG00645** **This sample was received as a sealed container of finished drinking water. It was opened on 1/19/16 and an aliquot was transferred to a 125 mL laboratory bottle for *analysis (Unit 32CC).***

TESTING INFORMATION			REGULATORY INFORMATION			
Analyte Name	Result (mg/L)	Date Tested	RL (mg/L)	MCL/AL (mg/L)	Method	CAS #
Copper	Not detected	01/20/2016	0.05	1.3	EPA 200.8	7440-50-8
Lead	Not detected	01/20/2016	0.001	0.015	EPA 200.8	7439-92-1

The analyses performed by the MDEQ Drinking Water Laboratory were conducted using methods approved by the U.S. Environmental Protection Agency in accordance with the Safe Drinking Water Act, 40 CFR parts 141-143, and other regulatory agencies as appropriate.

Your local health department has *detailed information about the quality of drinking water in your area.* If you have concerns about the health risks related to the test results of your sample, please contact the Environmental Health Section through the address and telephone number listed below:

CAS# : Chemical Abstract Service Registry Number
MCL : Maximum Contaminant Level
AL : Action Level
RL : *Reporting Limit*

mg/L : milligrams / Liter (ppm)
ppm : parts per million
MPN : Most Probable Number
CFU : Colony Forming Unit

Lead in Drinking Water

Preliminary Assessment

U.S. EPA Flint Task Force

12/22/2015

DRAFT

1.0 Overview

The United States Environmental Protection Agency (EPA) has offered, and the City of Flint has accepted, the assistance of EPA experts on corrosion and corrosion control. This preliminary assessment is intended to document the activities and funding necessary to enable EPA to provide advice and support to the City of Flint in optimizing and maintaining corrosion control treatment under current water quality conditions as well as during and after the upcoming transition to the Karegnondi Water Authority (KWA) pipeline.

[Note: There are many other communities scheduled to transition from their current water sources to the KWA pipeline. Although the source water will be the same for the City of Flint and all communities transitioning to the KWA pipeline source, the intended treatment planned for these communities may differ and the studies undertaken for the City of Flint may or may not be suitable for use by the other communities. It is strongly recommended that the EPA Task Force discuss with the Michigan Department of Environmental Management (MDEQ) the importance of actively working with these additional communities to ensure that proper studies on optimizing and maintaining OCCT are undertaken prior to putting the new KWA source in service for all affected communities. If such studies are not currently underway, they should be initiated as soon as possible.]

2.0 Information Request

In order to provide effective advice and assistance, the EPA Task Force should request the following information from the City of Flint.

2.1 Current inventory of homes with service line information in excel or similar format.

Pipe loops are corrosion control treatment assessment tools that enable evaluation of the effects of potential water quality changes and different levels of orthophosphate treatment on the existing pipe scales in order to select the most effective treatment before the treatment is applied on a city-wide basis. The pipe loops utilize lead service lines that are actively in service and carefully extracted so that the treatment assessment is conducted with pipes that represent conditions within the distribution system. As it would not be possible to perform service line extractions in the winter without significantly altering or dislodging the scales within the pipes, the identification and extraction of lead service lines should be given the highest priority to ensure that a sufficient number of lead pipes can be identified and extracted as soon as possible. In order to identify suitable homes with lead lines, the EPA Task Force will need current records on lead service line locations to be provided as soon as possible so that sampling can be coordinated and conducted to verify the presence of lead lines.

To minimize the need for excavation, homes with the longest lead service lines should be chosen so that multiple segments can be harvested from each lead line. The lead lines would typically be the longest where the water main is located across the street from the home and the home is set back on the property with respect to the street. An estimated 20 lead pipe segments should be carefully extracted and handled using ORD-specified procedures for use in constructing pipe loops at the treatment plant.

As the scales within the service lines have been subject to significant and iterative water quality changes in a relatively short period of time, it is also necessary to extract additional lead and non-lead portions of service lines to assess the current condition of the scales within the service lines.

2.2 All lead in water testing results for City of Flint, including those not used for Lead and Copper Rule compliance.

Studies have shown that homes served by lead service lines generally have much higher lead levels than homes without lead service lines. As it is anticipated that the City of Flint's service line records will be incomplete, the lead-in-water testing data is a supplemental tool that can be mapped to identify areas of the city that may have higher lead-in-water levels which would indicate the presence of lead service lines. This information will help the EPA Task Force in the identification and extraction of lead service lines for constructing the pipe loops and in identification of areas to test the progress of corrosion control.

2.3 Identification of areas in Flint with elevated blood lead levels.

Similar to the lead-in-water testing, identification of areas (e.g., zip codes, neighborhoods) where elevated blood lead levels are found can provide additional data which would indicate the presence of lead service lines for the identification of areas to test the progress of corrosion control.

2.4 Addresses of homes that have had water service interruptions or street disturbances (e.g., water main breaks, road/sidewalk construction, etc.) within the last year.

Streets where there have been potential physical disturbances and homes where the water service has been interrupted should be prioritized for evaluation for the presence of lead service lines as the disturbances can release very high lead and prolonged stagnation can affect the stability of the scales within the pipes.

2.5 Addresses of currently unoccupied homes.

Similar to homes where the water service has been interrupted, homes that are unoccupied should be prioritized for evaluation for the presence of lead service lines as these homes may pose a significant risk to incoming occupants if the home has a lead service line. Recently unoccupied homes also may provide important evaluation locations of water usage impacts on scale stability and lead release/exposure.

2.6 Identification of the pressure zones and location of each of the water quality parameter locations (addresses) within each pressure zone used for water quality parameter measurements (pH, alkalinity, orthophosphate, chlorine, total Coliform) in the distribution system, along with copies of the water quality parameter analytical results for past 4 rounds of monitoring.

In addition to corrosion control treatment optimization, the City of Flint must simultaneously comply with all other applicable National Primary Drinking Water Regulations (NPDWRs). A system-wide assessment of the water quality will provided information necessary to ensure that any potential issues with other NPDWRs can be identified and resolved. Information regarding the water quality in the distribution system is necessary to evaluate the stability of the water quality parameters throughout the distribution system, and to detect locations that may have the highest risk of lead release, TTHM formation, or the presence of microbial contamination.

3.0 Immediate Tasks and Timeline

The following tasks should be undertaken immediately (November/December 2015)

3.1 Determination on EPA funding commitment(s) (DRA).

3.2 Discussion with Central Regional Laboratory (CRL) regarding laboratory capabilities and support (GWDWB, ORD).

3.3 Development of EPA QAPPs encompassing the following activities (GWDWB, ORD, Others*):

- 3.3.1 Verification of presence of lead service lines*;
- 3.3.2 Pipe rig construction, operation, and maintenance;
- 3.3.3 Treatment assessment monitoring;
- 3.3.4 Evaluation of lead reservoirs within service lines; and
- 3.3.5 Evaluation of scale degradation due to stagnation events at unoccupied homes and water shut-offs*.

*If these activities are undertaken by one or more of the local partners, QAPP development should be part of the agreement.

3.4 Identification of local partners that can coordinate with the EPA Flint Task Force, MDEQ, and the City of Flint, and establishment of agreements to provide assistance on field and other activities (ORD).
[Potential local partners who have expressed strong interest and willingness to collaborate with EPA include Wayne State University, University of Michigan Flint, Michigan State University, Hurley Medical Center, and Genesee County Health Department.]

3.5 Outreach and education – specifics to be determined.
[Potential local partners Hurley and WSU have asked ORD directly if EPA can provide training/education for their staff on lead in water occurrence, sampling for lead, and corrosion/corrosion control treatment]

3.6 Assessment of information from 2.1 to verify the presence of a sufficient number of accessible homes with lead service lines that can be extracted for construction of pipe loops and to evaluate the current state and stability of the scales within the lead and non-lead portions of service lines (TBD).

3.7 Extraction of approximately twenty lead line segments with active water for construction of pipe loops, and six additional full service lines with different pipe material (two with lead and galvanized iron, two with lead and copper, and two with lead and plastic segments) for analyzing the lead reservoirs within the lead and non-lead segments of the service lines (TBD).

3.8 Risk evaluation and communication on the potential risk from physical disturbances to lead service lines, reoccupation of unoccupied homes and re-establishment of water service following water shut-offs (TBD).

4.0 Funding Needs (To Be Determined)

5.0 Optimization and Maintenance of Optimal Corrosion Control Treatment

The narrative below describes the scope of work to be undertaken in providing assistance to the City of Flint and is contingent on adequate funding being provided.

5.1 Lead Service Line Detection Methodology Development

Verification of the presence of lead service lines is necessary for identification and extraction of lead service lines, sampling for treatment assessment, Lead and Copper Rule compliance sampling, risk evaluation and implementation of a lead service line replacement program. Blood lead level (BLL) or other lead-related health evaluations also need to be able to identify all lead sources for blood-tested individuals to prioritize risk locations and mitigation strategies. This methodology development is designed to determine if a simple water sampling protocol can give a convenient means to verify with some level of confidence, whether or not a residence has a lead service line, through relatively non-intrusive water sampling. Experience with other utilities has shown that paper records may either under or overestimate the presence of lead service lines.

The strategy to be employed is based on published protocols with improvements being researched by Polytechnique Montreal (Michele Prevost, Elise Deshommes, Clement Cartier). This requires staffing for coordination with Flint paper records, resident contact, plumbing mapping, field sampling (TBD, but estimated at 20 locations with no LSLs for "control" purposes, and 50 locations believed to have LSL for validation. Development of this protocol could involve re-sampling to test techniques, and could utilize one or more Palintest electrochemical analyzers after validation vs. ICP-MS. EPA-ORD has one Palintest analyzer which can be used. Field personnel would work closely with R5 CRL to test the limits of analytical performance of the Palintest analyzer.

[Note: Verification of the locations of lead service lines for compliance sampling and for corrosion control treatment assessment is a best practice for all systems.]

5.2 Corrosion Control Treatment Optimization Evaluations

The corrosion control treatment optimization evaluations are necessarily separated into two stages. The first stage is intended to optimize corrosion control treatment with the current water source and water quality conditions. The second stage is designed to prepare for the transition to the new water source (KWA Pipeline) and water quality conditions, and to ensure that the City of Flint is able to simultaneously comply with all National Primary Drinking Water Regulations following the transition to the new source.

5.2.1 *Short-Term (Current) Lead Release Optimization Evaluation.* A lead pipe rig system will be constructed at the Flint water treatment plant with exhumed lead pipes, carefully collected and installed into the pipe rig (see example pipe rig schematic in appendix). EPA-ORD will provide technical assistance in the rig design and construction, as well as the design provisions for chemical additions. One to two people will be required to be on-site to perform periodic chemical analyses and operate and maintain the pipe rig system, as well as to troubleshoot/repair any problems and to collect samples. Laboratory

instruments for pH and colorimetric tests (chlorine residual, orthophosphate) will be needed on site. It is anticipated that the design will include a "control" loop and loops with possibly 3-4 different dosages, in duplicate. The estimated sampling frequency would be at least three times per week, using ICP for metals and ICP-MS for lead on each sample, with one complete characterization sample before each stagnation period. Filtration apparatus will also be needed.

5.2.2 *Simultaneous Compliance Optimization Pilot Testing Prior to Flint Water Plant Treatment of KWA Water.* This effort will necessarily be more expansive than the short-term evaluation. The same control pipes would carry over, but new pipes would need to be stabilized with the current water. Upstream of the lead pipe rig, there would need to be a series of jar tests or a small pilot plant established to optimize coagulation, softening (if necessary), filtration and disinfection processes to meet disinfection byproduct (DBP) limits and microbial inactivation requirements. Investigations are also needed to assess the potential impacts of different possible treated Lake Huron water qualities on chlorine, biofilm growth, water age, microbial pathogens such as Legionella, phosphate demand and scaling potential. Pilot evaluations could be done on different unit processes using anticipated Lake Huron water, using university-run pilot plants, shipped or trucked water, etc. Some pilot evaluation analyses could be done on-site with portable analytical instrumentation as is typical. When a final water quality target is determined, the target finished water would become the source water to feed into the lead (and metal) pipe rigs, and thereafter the optimization of phosphate dosing would be done on the stabilized exhumed lead pipes in the pipe rigs. A reservoir may need to be constructed to hold processed simulated Lake Huron treated water produced by the pilot plant and fed to the pipe rigs. This evaluation must be started as soon as possible to allow sufficient time for reliable results to avoid having to conduct full-scale testing on water delivered into the distribution system that could impact Flint consumers after the switch to the KWA pipeline is made.

[Note: Evaluation of Corrosion control treatment optimization using a pipe rig is a best practice for all systems changing sources/treatment.]

5.3 Lead Source/Release Diagnostic Evaluation

While the data collected from the pipe loops can provide information on the relative effectiveness of various treatment schemes, conditions at the plant are not the same as within the distribution system. Continued monitoring of lead levels at high risk sites throughout the distribution system is needed to make any necessary adjustments based on actual conditions within the distribution system. EPA estimates that approximately 45 homes will need to be identified for ongoing sampling to inform the treatment optimization process. (15 with lead & copper service line portions, 15 with lead & galvanized iron service lines and if available, 15 with lead and plastic service line portions). This evaluation is necessary for determining what the relative contributions of lead are from different plumbing sources in order to assure optimization of lead and other metal release from the service lines and premise plumbing. Two sampling rounds are the minimum expected for profile sampling which will utilize small volume samples through faucet and sink area and larger (one-liter) samples thereafter.

Sampling would involve 15 sites for each combination of plumbing materials (total of 45 sites), with an anticipated 10-15 sequential samples per site for metals per sampling event. Additional samples will be collected and analyzed to characterize the water quality and the sequential samples will be analyzed for Pb, Cu, Fe, Zn, and Al. An experienced plumber or researcher will be needed to map the plumbing at each site, field personnel will be needed to collect and ship samples, and a data manager will be needed to manage the data. If dissolved vs. total metals are desired in the analyses, an addition person with field filtration skills will be needed, in addition to the lab supplies. If meters, brass or galvanized pipe are found to be a significant source of lead, those devices should be included in the pipe rigs.

[Note: Monitoring of lead levels at high risk sites throughout the distribution system to make any necessary corrosion control treatment adjustments is a best practice for all systems changing sources/treatment.]

5.4 Pipe analyses for long-term treatment assessment and mechanisms of lead and other metals release

Optimization of corrosion control treatment requires specialized knowledge on scale chemistry as well as specialized equipment and equipment operating skills. The timeline for activities related to evaluating the progress in optimizing corrosion control treatment following the transition to the KWA pipeline source will extend beyond the current fiscal year and likely well into FY 2017. The necessary resources and expertise must continue to be made available to the Task Force for the expected duration of the project in order to ensure a successful outcome which would enable the City of Flint to simultaneously comply with all NPDWRs following the transition to the KWA pipeline.

[Note: Long-term evaluation of corrosion control treatment effectiveness is a best practice for all systems.]

6.0 Additional Recommendations and Needs

[Note: The additional recommendations in the Section 6.1 and 6.2 are advisable for all systems with lead service lines. The recommendation in Section 6.3 is specific to Flint.]

6.1 Impact of Water Use/House Occupancy on Stability and Lead Release from Lead and Other Premise Piping.

There are a large number of unoccupied homes in Flint. Homes which have been unoccupied for an extended period of time can pose a greater risk to incoming residents due to the stagnation of water within the plumbing over an extended period of time which can destabilize the scales within the plumbing and release high lead levels into the water. If access can be facilitated by the City of Flint or other organizations involved with housing, sampling will be conducted at 10-20 vacant or recently occupied homes in conjunction with a flushing program to assess how long it takes for increased water usage to improve the effectiveness of the corrosion control treatment for these homes. Sequential sampling profiles would be done for metals as well as chlorine residuals for each home. Flushing for different times would be tested and evaluated with

repeated profile sampling to see if there is any improvement in lowering lead levels with increased water use.

6.2 Protocol for Exposure Estimation Sampling for Health-Related Evaluations (Premise & Building Plumbing).

This protocol development would compare various potential options for sampling to estimate the cumulative metal exposure from the drinking water in premise plumbing or schools. Comparisons would be made with manual or automated proportional sampling, tap POU units that could log water use and be disassembled and digested for metal content, and random daytime sampling protocols. Different types of POU-suitable filtration apparatus would be tested to see if designs would permit quantitative separation of dissolved versus particulate lead and other metals. Support would be needed for setting up and operating test systems, analyzing virgin and exposed filter/device materials with accumulated metals, building and installation of proportional samplers or development of protocol for resident-collected samples, rapid turn-around Lead and other water analyses of test exposure water fed into experimental systems.

6.3 Risk communication on lead service lines

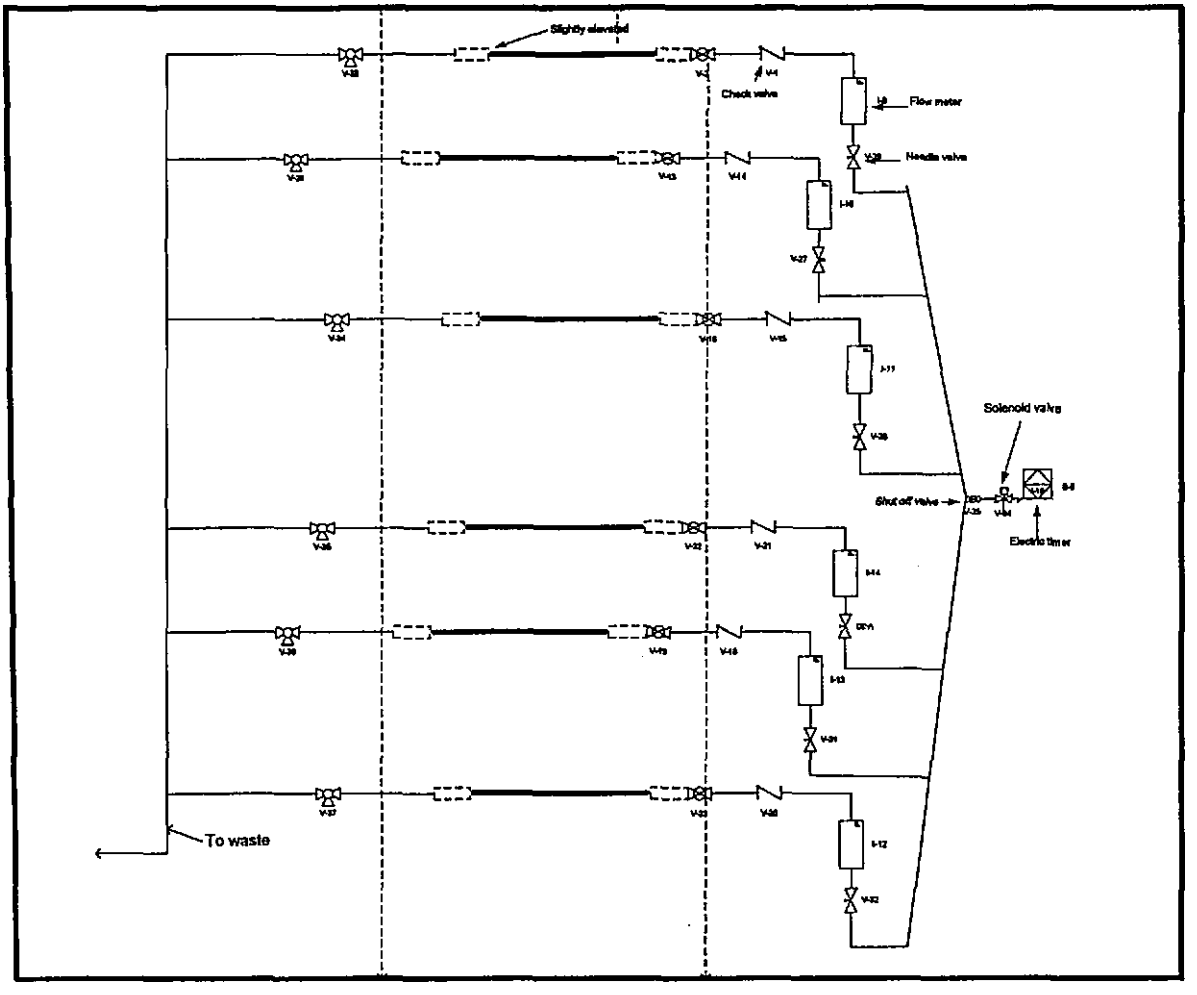
Request OEJ support/assistance for the development and dissemination of risk communication material on lead service lines, including the potential risk from physical disturbances to lead service lines and lead reservoirs in other pipes downstream of lead service lines.

7.0 Timeline

The proposed activities are contingent upon available funding. As such, it is not possible at this time to develop a meaningful timeline, with the exception of the activities in Section 2.0 and some of the activities in Section 3.0 which are discussed in those sections. Once funding is secured a detailed timeline will be developed that incorporates both funded and unfunded activities. A Task Force member will be identified as the lead person responsible for ensuring the completion of each activity or group of activities to ensure that the work is completed in accordance with the timeline.

APPENDIX

Schematic of Lead pipe rig (6 lead sections) from single water source



Shown above are 6 lead sections with a single water source. All are attached to a unistrut framework with casters. Water flows in a single pass through the pipes to waste. The source water can be turned off/on using a timer-controlled solenoid valve.

Task Force Comments on Michigan Department of Health and Human Services' Draft Protocol for Collecting Residential Drinking Water Samples for Lead Analysis.

EPA received the draft of Michigan DHHS's draft "Protocol for Collecting Residential Drinking Water Samples for Lead Analysis Flint's Residential" for comment from Jim Sygo, MDEQ, on November 18, 2015. Below are comments from EPA's Flint Safe Drinking Water Task Force.

Specific Comments

1. The document needs to be clear on the purpose for this sampling. Is the sampling trying to determine the contribution of lead in drinking water to elevated blood lead (EBL) levels? Is the sampling to determine the current exposure to lead in drinking water? In "Step 2 – Identify and Label the Sample Faucets", there is the instruction "If a temporary in-line filter is installed on the faucet, use the by-pass lever to collect unfiltered water samples. A whole house filter does not preclude sampling, as this is a permanent filter and representative of actual exposure."

If the sampling is to try to determine the contribution of lead in drinking water to an EBL level result, the resident needs to be asked whether a tap filter was in use and maintained during the period of exposure leading to the EBL result. This will determine whether the tap filter should be by-passed. There needs to be comprehensive characterization of both the actual ingested water for a given monitored child, and also in parallel, an assessment of the potential from the unfiltered water. Filters have finite lifetimes before replacement, and we don't know when they are exhausted and how that impacts the exposure of the individual.

If the sampling is to determine current exposure, then the tap filter should not be by-passed. There are other complexities with determining current exposure with the use of a tap filter. The investigators will need to question the residents about how often they are using the filter and how often they are using unfiltered water from that or other untreated taps in the house. There might even be a need to do a follow-up smaller set of samples taken through the filter to make sure it has been maintained and is still removing lead.

2. We suggest adding the following language to the last sentence of the introductory paragraph to make it clear that the interior plumbing and the service line are being evaluated for lead contributions: "The results will be used to evaluate human exposure to lead in household drinking water and to identify all plumbing components from the home to the water main that are contributing lead to household drinking water."

3. The drinking water samples from the kitchen faucet, including both the two 125-ml first-draw samples and the sequential 1-liter samples, should be collected **before** any small volume samples are taken from bathrooms. The two 125-ml samples from the bathroom faucets is water sitting in the faucet and a short segment of pipe under the sink. Taking the kitchen samples first shouldn't

affect this water. On the other hand, taking the bathroom samples first will draw water from the interior plumbing/service line, especially if multiple bathrooms are sampled.

4. The protocol indicates ten large volume sequential samples will be taken from the kitchen cold water faucet. Please be aware that the number of 1-liter samples to capture water from the sample tap to the water main will be different depending on the distance from the tap to the main and on the diameter of the pipes. Additional samples may need to be taken in certain situations, e.g., if the kitchen tap is at the back of the house; the water main is across the street from the house. A way to estimate the number of samples needed is: Estimate the distance from the front of the house to the water main. Divide that distance by 15 and round up to the nearest whole number. Add 4 to the result (for internal plumbing).

5. Wide-mouth bottles should be used for the 1-liter samples to allow the samples to be collected by opening the cold water faucet gently but fully in order to be consistent with how the resident would fill a glass or pot with water.

6. In the section "Before the EBL Inspection" where information is being gathered about the house, we suggest also identifying/photographing any street work that has been done in front of the house (i.e., physical disturbances). This can be road work, water main work, other utility work, etc.

7. In "Step 3 – Collect the Small Volume Samples", the instructions state do not remove the aerator if there is one, but make a note if one is present. We suggest checking the aerator for particles after the water samples have been taken.

8. In "Step 4 – Collect the Large Volume Samples: Sample collection", We suggest the following language for #1: "Place the A1 bottle under the faucet, open the cold water faucet gently but fully ~~to produce a moderate, steady stream~~ and fill the first bottle to the appropriate level. Immediately fill bottles A2 to A10 consecutively without a break in the stream (do not turn off the faucet between bottles and do not allow water to run down the drain between the bottles).

Flint Safe Drinking Water Task Force Comments on MDEQ Draft Protocol for Collecting Water Samples at Schools for Lead Analysis

EPA received the latest draft of MDEQ's "Protocol for Collecting Water Samples at Schools for Lead Analysis" for comment from Liane Shekter-Smith on October 19, 2015. Below are comments from EPA's Flint Safe Drinking Water Task Force.

General

There is an understandable urgency to assess the situation in schools, but an equally important consideration should be the ability to assess whether progress is being made over time as treatment is introduced and monitored. It is critically important that everyone understand how to collect samples from the different types of outlets, how to interpret the sample results (i.e., what the results mean and what they don't mean) and how to effectively communicate the results to the public.

Additionally, there is always confusion over what threshold lead levels should be used and what the numerical sampling results mean. It is very important that everyone involved in the sampling and communication have proper training so that accurate information is provided to the public from the beginning. EPA's recommendation is that training be provided by ORD as soon as possible to the health department and others that are involved before the school sampling begins. It would also be good to provide the same entities an overview on corrosion and corrosion control so that the objectives of the sampling and capabilities/limitations of the treatment are properly understood by all.

Sampling protocol

The proposed end-point sampling is useful and can provide information on whether end-point devices should be replaced. Relying solely on the proposed sampling to evaluate the safety of the water in the plumbing overall is not possible. It is essential to have proper baseline data from throughout the school plumbing, not just the endpoints, to assess the risk as well as the progress of treatment. The best sampling protocol for that would be sequential sampling conducted at 2 or 3 locations in each school. The sequential sampling results would enable an ongoing assessment of the effectiveness of treatment throughout the plumbing network over time. This type of an assessment is not possible to do with single samples. Certainty is very important at this stage.

Timing of Sample Collection

If the purpose of the sampling is to identify the sources of lead in the plumbing system and also to identify potential exposure, the timing of the sample collection is important. Do the schools have a program to flush all drinking water consumption taps and coolers and bubblers on the first day back in school after weekends, vacations, etc.? If they do not, the sampling will miss the worst potential exposure for the first few kids drinking the water.

The proposed timing in the protocol indicates that samples should not be collected followed an extended stagnation, such as a weekend. This limitation is more appropriate for samples collected from residences as this does not reflect normal household use. MDEQ should consider collecting samples on different days of the week to get an idea of the conditions throughout the

week. Samples from one or some of the locations taken on Monday mornings would represent the 'worst-case' lead levels found under normal conditions that the children would be exposed to as the water routinely stagnates in the plumbing each weekend that school is in session. Collecting samples during this time would provide more consistent 'worst-case' data under normal usage for evaluating the effectiveness of remedial efforts. Samples could then be taken on a Wednesday and on a Friday under different water use conditions.

On-Site Assessment
The protocol should state that the assessment should record any model number of faucets, valves, etc. that are accessible to inspection, with digital photos included, if possible. Some might be behind walls, but others may be just under sinks, bubblers, etc. This is important in identifying and interpreting the 125 mL samples. If potential brass devices are seen that would not be captured in the 125 mL sample, they should be noted, or an option added to include a 2nd sequential sample for the first draw, if appropriate.

The On-site Assessment should also identify if there is any water treatment being done in the building, i.e., POU or POE.

The second bullet under Step 1 asks about buildings built after 1986 and whether lead-free plumbing and solder was used. Keep in mind that the definition of lead-free was revised in 1996 and again in 2011. Most, if not all, 1986 brass/bronze plumbing fittings and fixtures would fail to meet the current lead-free requirements.

Under Step 5 – Prior to Sample Collection, there is a recommendation to flush the taps the afternoon prior to sampling because drinking water has not been consumed from them for several weeks. This seems to be equated with no use, which may apply to the water coolers and bubblers if shut off, but may not apply to kitchen taps (dish/pot cleaning) and bathroom taps (hand washing). Also, the instruction to school personnel should specify how many minutes to run the tap the day before sampling rather than "several minutes".

Sampling Volumes
Two sequential small volume samples at the beginning is preferable, just to have a better idea of the detail of multiple sources of lead in the proximity of the outlet. It sometimes would save a trip back to collect more samples if there is a high hit in the one sample. If you do the 125 mL only, the identification of plumbing fittings and fixtures in the On-site Assessment will help identify potential sources of lead in the case of a high hit.

POTTER ELEMENTARY SCHOOL

Outlet Sampling and Plumbing Assessment Recommendations

2500 North Averill Avenue, Flint, Michigan 48506

DEQ

BACKGROUND INFORMATION

On Friday, December 4, 2015, the Department of Licensing and Regulatory Affairs (DLARA) and the Department of Environmental Quality (DEQ) conducted an assessment of the plumbing system at Potter Elementary to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. Two out-buildings, in addition to the main school building, were included in the assessment. The assessment identified the following potential sources of lead leaching into drinking water:

- Lead solder joints on copper piping
- Brass valves and brass fittings
- Brass components in fixtures
- Galvanized piping

The assessment also identified a total of 61 faucets or fountains that provide water for drinking, cooking and/or food preparation. Fifty-seven faucets/fountains are in the main school building (four of these faucets/fountains were not assessed), two faucets/fountains are in out-building unit 2, and two faucets/fountains are in out-building unit 3. The DEQ and DLARA Team (Team) developed a sequence for sampling the faucets/fountains based on how water travels through each building.

On Saturday, December 5, 2015, the Team completed sampling of 53 faucets/fountains in the Potter Elementary main school building, the two faucets/fountains in out-building unit 2, and the two faucets/fountains in out-building unit 3, each in the order determined by the plumbing assessment from the previous day, following a stagnation period of over 12 hours. At each of the 57 faucets/fountains identified, staff collected four samples. Two initial, 125-milliliter samples (P1 and P2), were collected immediately after turning on the tap. The water was then flushed for 30 seconds and a third, 125-milliliter sample (F01) was collected. Finally, the water was flushed for another two minutes, and the fourth 125-milliliter sample (F02) was collected. These samples were used to determine the impact of any lead sources in and around each specific faucet/fountain and its connecting plumbing.

The following four outlets were out of service and could not be sampled:

- Bubbler Fountains in the Gym, north wall (No Site Code) and south wall (No Site Code)
- Water Coolers in the West Hallway near the Boys Bathroom, right (01WC010) and left (01WC011)

The Team then completed consecutive sampling at five of the 57 faucets/fountains in the Potter Elementary main school building, and one of the two faucets/fountains in out-building unit 3, six sites in total. This consecutive sampling was used to determine the impact of any lead sources located deep in the supply plumbing of the school building. The five sites in the main school building included three sites along the cold water supply line serving the west side of the building; one near the service line, one at a mid-point and one at the end of the line. The other two sites in the main school building are along the cold water supply line serving the east side of the building; one at a mid-point and one at the end of the line. The sixth consecutive sample site was taken at out-building unit 3. At each of these six sites, staff collected 10, 1-liter samples. The 10 samples were collected immediately after turning on the tap, and consecutively, without any flushing time in between.

WATER SERVICE INFORMATION

A four-inch diameter cast iron water service line enters the main school building in the northwest corner of the boiler room. The boiler room is located at the north end of the building. The cold water piping transitions to two-inch diameter copper piping in the boiler room. An electrical grounding system is attached to this copper piping in the boiler room. Three separate copper cold water lines exit the boiler room. One line exits through the south wall and serves the west side of the main school building. A second line runs in a tunnel through the east wall, turns into and serves the east side of the main school building. The third line exits through the west wall and serves the custodial room and bath directly adjacent to the boiler room. Hot water is distributed in continuous loops that feed from and return to a central water heater in the boiler room. Hot water piping material, where exposed, is copper piping with lead solder joints.

The two out-building units are connected to a separate water service line from the City water main, constructed with copper piping material. The service line comes out of the ground beneath out-building unit 2 and another line runs across and comes out of the ground beneath out-building unit 3. Piping within the out-building units is copper pipe with lead-free solder joints.

Outlets with Lead Levels Greater Than 15 Parts per Billion

The DEQ recommends school facilities take action if samples from any drinking water outlets show lead levels greater than 15 parts per billion. Based on the sampling conducted at 57 faucets/fountains on December 5, 2015, the following 20 drinking water outlets had lead water level results greater than 15 parts per billion. Each of these 20 outlets is listed below with its sample results, including a description of the potential source(s) of lead, and recommended actions to be taken by the school.

Outlet: Bubbler Fountain (01DW006)

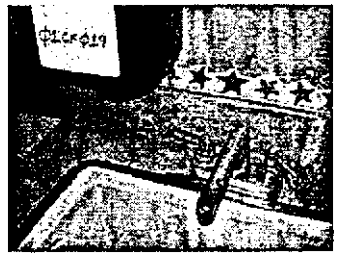
Location: Classroom 15, south wall
Results: P1=30 parts per billion, P2=14 parts per billion
F01=2 parts per billion, F02=1 part per billion

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is made of chrome-plated brass. The connecting piping to the unit also contains some brass components, including brass fittings, a brass shut-off valve, and copper piping with lead solder.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF019)

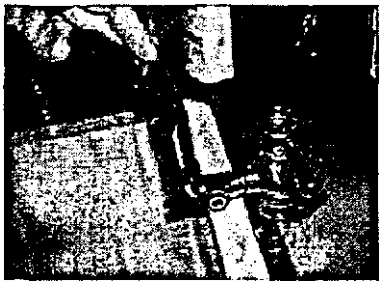
Location: Classroom 7, south wall
Results: P1=18 parts per billion, P2=12 parts per billion
F01=1 part per billion, F02=non-detect



These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This faucet appears to be a Chicago Specialty model that may contain some brass components. The connecting plumbing contains some brass fittings.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW020)



Location: Classroom 7, south wall
Results: P1=17 parts per billion, P2=5 parts per billion
F01=4 parts per billion, F02=3 parts per billion

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is constructed of chrome-plated brass. The connecting plumbing contains some brass fittings.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF021)

Location: Classroom 6, north wall
Results: P1=25 parts per billion, P2=8 parts per billion
F01=2 parts per billion, F02=1 part per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet appears to be a Chicago Specialty model with a solid brass body and spout. The connecting plumbing contains some brass fittings and copper piping with lead solder.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW022)

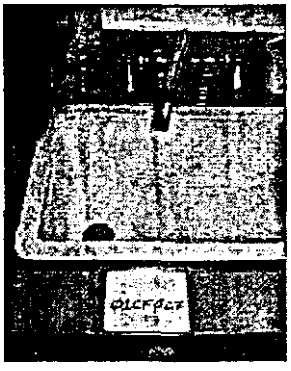
Location: Classroom 6, north wall
Results: *P1=65 parts per billion, P2=5 parts per billion*
F01=3 parts per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the bubbler and connecting plumbing. This bubbler fixture is made of chrome-plated brass, with a brass connector on the underside of the sink. The connecting plumbing contains brass connections.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF027)

Location: Classroom 4, north wall
Results: P1=17 parts per billion, P2=10 parts per billion
F01=2 parts per billion, F02=non-detect



These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet appears to be a Chicago Specialty model with a solid brass body and spout. The connecting plumbing contains brass connections, brass fittings, brass shut-off valves, and copper piping with lead solder.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF029)

Location: Classroom 3, south wall
Results: P1=24 parts per billion, P2=24 parts per billion
F01=5 parts per billion, F02=9 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet appears to be a Chicago Specialty model with a solid brass body and spout. The connecting plumbing contains brass connections, brass fittings, brass shut-off valves, and copper piping with lead solder.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW032)

Location: Room 1A, north wall
Results: P1=23 parts per billion, P2=11 parts per billion
F01=28 parts per billion, F02=5 parts per billion

These results suggest the highest contribution of lead may be from the bubbler fixture and its connecting plumbing. The bubbler unit is constructed of chrome-plated brass, with a brass connector on the underside of the sink. The connecting plumbing contains some brass fittings and brass connectors.

Replacement of the bubbler and connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW034)

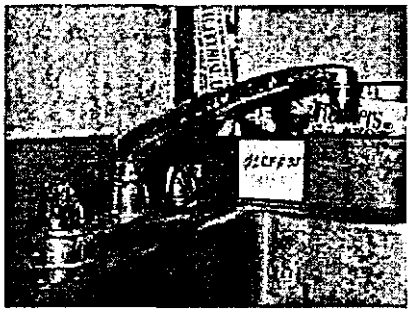
Location: Room 1A, southeast corner
Results: P1=556 parts per billion, P2=69 parts per billion
F01=38 parts per billion, F02=4 parts per billion

These results suggest the highest contribution of lead may be from the bubbler fixture and its connecting plumbing. This bubbler unit is constructed of chrome-plated brass, with a brass connection on the underside of the fountain base. The connecting piping to the unit contains brass connections and a brass shut-off valve.

Copper results for P1 and F01 at this location were also at levels above which the DEQ recommends school facilities take action. Copper results suggest these same brass components and copper piping are contributing to this condition.

Replacement of the bubbler and connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following *periods of stagnation is likely to reduce lead and copper concentrations and lead* and copper exposure.

Outlet: Classroom Faucet (01CF035)



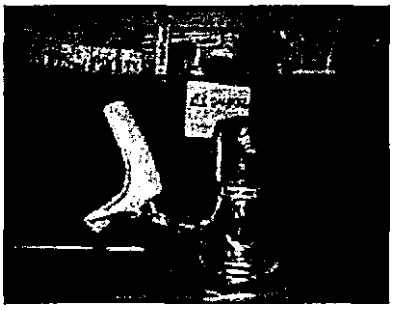
Location: Room 2A, north wall
Results: P1=9 parts per billion, P2=23 parts per billion
F01=12 parts per billion, F02=6 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. This fixture appears to be a Chicago Specialty faucet. This model faucet typically has a brass tube in its deck body and contains some additional brass components. The connecting piping has some brass connections, brass fittings, and brass shut-off valves.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Bubbler Fountain (01DW036)



Location: Room 2A, north wall
Results: P1=25 parts per billion, P2=7 parts per billion
F01=4 parts per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the bubbler fixture itself. This bubbler unit is constructed of chrome-plated brass, and has a brass connection on the underside of the sink. The connecting piping to the unit contains brass connectors and a brass shut-off valve.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF037)

Location: Classroom 38, north wall
Results: P1= 30 parts per billion, P2=19 parts per billion
F01=2 parts per billion, F02=non-detect

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet appears to be a Chicago Specialty model with a solid brass body and spout. The connecting plumbing contains brass connections, brass fittings, brass shut-off valves, and copper piping with lead solder.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

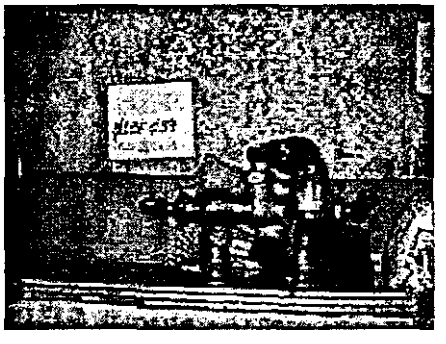
Outlet: Bubbler Fountain (01DW038)

Location: Classroom 38, north wall
Results: P1=23 parts per billion, P2=3 parts per billion
F01=non-detect, F02=non-detect

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is made of chrome-plated brass, with a brass operating valve, and a brass connector on the underside of the sink.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF039)



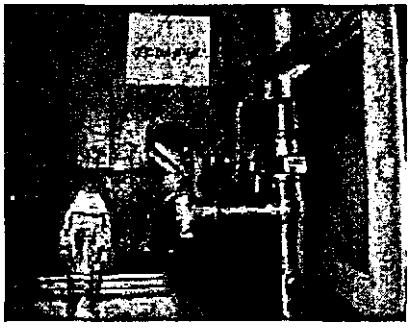
Location: Classroom 39, south wall
Results: P1=30 parts per billion, P2=22 parts per billion
F01=2 parts per billion, F02=2 parts per billion

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet appears to be a Chicago Specialty model with a solid brass body and spout. The connecting plumbing contains brass connections, brass fittings, brass shut-off valves, and copper piping with lead solder.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW040)

Location: Classroom 39, south wall
Results: P1=261 parts per billion, P2=26 parts per billion
F01=12 parts per billion, F02=8 parts per billion



These results suggest the highest contribution of lead may be from the bubbler fixture and its connecting plumbing. This bubbler fixture is made of chrome-plated brass. The connecting plumbing also contains some brass components, including brass fittings, a brass shut-off valve, and copper piping with lead solder.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Classroom Faucet (01CF041)

Location: Classroom 36, north wall
Results: P1= 20 parts per billion, P2=11 parts per billion
F01=1 part per billion, F02=non-detect

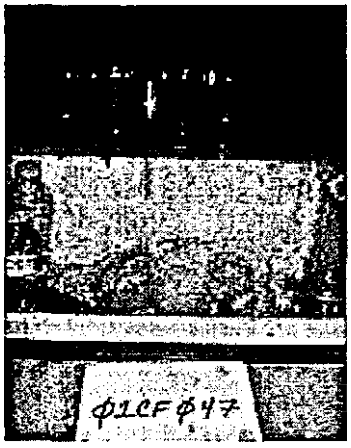
These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet appears to be a Chicago Specialty model with a solid brass body and spout. The connecting plumbing contains brass connections, brass fittings, brass shut-off valves, and copper piping with lead solder.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

This faucet also has an aerator/screen at the outlet. If the faucet is not replaced, the aerator/screen should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator/screen should be periodically checked and cleaned.

Outlet: Classroom Faucet (01CF047)

Location: Classroom 35, south wall
Results: P1= 22 parts per billion, P2=42 parts per billion
F01=15 parts per billion, F02=11 parts per billion

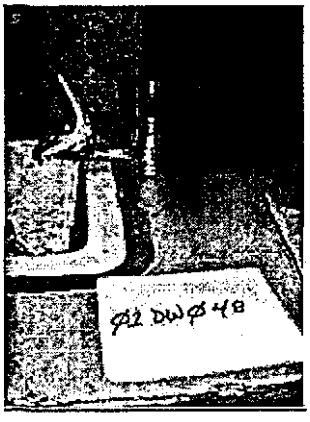


These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet appears to be a Chicago Specialty model with a solid brass body and spout. The connecting plumbing contains brass connections, brass fittings, brass shut-off valves, and copper piping with lead solder.

Replacement of this faucet and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Bubbler Fountain (01DW048)

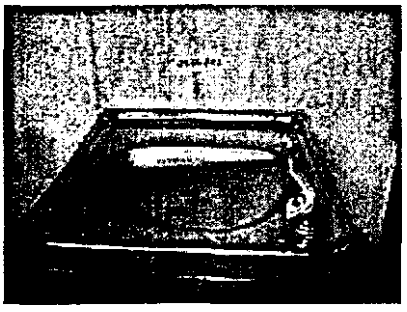
Location: Classroom 35, south wall
Results: P1=17 parts per billion, P2=10 parts per billion
F01=9 parts per billion, F02=6 parts per billion



These results suggest the highest contribution of lead may be from the bubbler fixture itself. This bubbler unit is constructed of chrome-plated brass, with a brass connection on the underside of the sink. The connecting piping to the unit contains brass connectors and a brass shut-off valve.

Replacement of this bubbler and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Water Cooler (01WC051)



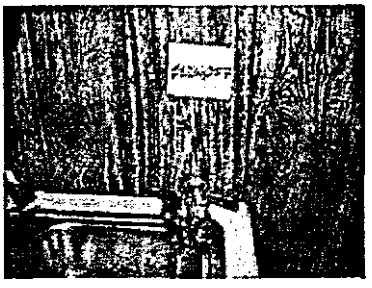
Location: Hallway Across from Classroom 31
Results: P1=2 parts per billion, P2=2 parts per billion
F01=21 parts per billion, F02=1 part per billion

These results suggest the highest contribution of lead may be from the water cooler unit and its connecting plumbing. The water cooler is an Elkay model MEBFS-8-1. This model contains some brass components. Connecting plumbing to the cooler unit may also contain some brass components.

Copper results for sample F01 at this location was also at levels above which the DEQ recommends school facilities take action. Copper results suggest these same brass components and copper piping are contributing to this condition.

Replacement of the water cooler unit and its connecting plumbing with lead-free materials will significantly reduce lead and copper exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead and copper concentrations and lead and copper exposure.

Outlet: Bubbler Fountain, (02DW057)



Location: Out-building Unit 2
Results: P1=27 parts per billion, P2=1 part per billion
F01=non-detect, F02=non-detect

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is made of chrome-plated brass, and has a brass operating valve. The connecting plumbing contains some brass fittings.

Replacement of this bubbler tap and its connecting plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for three minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlets with Copper Levels Greater Than 1.3 Parts per Million

The DEQ recommends school facilities take action if samples from any drinking water outlets show copper levels greater than 1.3 parts per million. Based on the sampling conducted at 57 faucets/fountains on December 5, 2015, the following additional drinking water outlet had copper results greater than 1.3 parts per million, but lead water level results less than 15 parts per billion. This outlet is listed below with its copper sample results, including a description of the potential source(s) of copper, and recommended actions to be taken by the school.

Outlet: Water Cooler (03WC059)

Location: Out-building Unit 3
Results: P1=0.85 parts per million, P2=1.11 parts per million
F01=2.54 parts per million, F02=1.31 parts per million

These results suggest the highest contribution of copper may be from the water cooler unit and its connecting plumbing. This model water cooler contains some brass and copper components. Connecting plumbing to the cooler unit may also contain brass components and copper piping.

Replacement of this unit and its connecting plumbing is recommended and will reduce copper exposure at this location. F01 and F02 sample results suggest stagnant water conditions in the copper supply piping may be contributing to these levels. Consecutive sampling results for out-building unit 3 suggest that development of a routine operational flushing procedure for this building and its outlets is likely to reduce copper concentrations and copper exposure.

Outlets with Lead Levels 15 Parts per Billion or Less

While the remaining 36 sampled outlets showed sample results to be at levels requiring no further action, several recommendations have been identified.

The fourth sample (F02) at all 57 outlets following approximately three minutes of use and flushing at a reduced flow resulted in reduced lead concentrations of 11 parts per billion or less. This indicates that flushing of all taps used for drinking, cooking, and/or food preparation for four minutes following periods of stagnation will further reduce lead exposure. It is recommended that an operational flushing procedure be developed for use by staff responsible for plumbing operations and maintenance with emphasis on flushing after weekends and holidays.

Twenty-two of the remaining 36 outlets are comprised of similar materials as the outlets listed above and could potentially experience higher lead levels under extended periods of stagnation. These faucets/fountains include:

- Bubbler Fountains: Classroom 22, north wall (01DW002); Classroom 20, north wall (01DW005); Classroom 12, north wall (01DW012); Classroom 10, north wall (01DW016); Classroom 8, north wall (01DW018); Classroom 5, south wall (01DW023); Classroom 4, north wall (01DW028); Classroom 3, south wall (01DW030); Classroom 36, north wall (01DW042); Classroom 37, south wall (01DW044); Classroom 34, north wall (01DW046); Classroom 33, south wall (01DW049); and Art Room 31, south wall (01DW053).

- Classroom Faucets: Classroom 20, north wall (01CF004); Classroom 22, north wall (01CF001); Classroom 15, south wall (01CF007); Classroom 12, north wall (01CF013); Classroom 10, north wall (01CF015); Classroom 8, north wall (01CF017); Room 1A, north wall (01CF033); Classroom 37, south wall (01CF043); and Art Room 31, south wall (01CF052).

Replacement of these fixtures with lead-free materials is also recommended.

The four drinking water bubbler fountains and water coolers identified as out of service in the Background Information, should be sampled prior to being placed back into service, or replaced with lead-free materials.

The remaining fourteen outlets showed sample results of 15 parts per billion or less, requiring no further action or additional recommendations. These faucets/fountains include:

- Bathroom Faucet in Classroom 3, north wall, (01BF031).
- Classroom Faucets: Computer Room, south wall (01CF003); Classroom 9, south wall, (01CF014); Classroom 5, south wall, (01CF024); Classroom 34, north wall, (01CF045); and Classroom 33, south wall, (01CF050).

- Kitchen Faucets: Community Room, south wall (01KC008); Office across Community Room, east wall, (01KC009); Classroom 5, south wall, (01KC025) and (01KC026); Out-Building Unit 2, (02KC056); and Out-Building Unit 3, (03KC058).

- Water Coolers: Hallway south of Gym, right (01WC054); and left (01WC055).

Consecutive Sampling Results and Building Plumbing Recommendations

The consecutive samples taken on December 5, 2015, at six sites in the Potter Elementary school building provide additional confirmation that the highest contribution of lead appears to be from the individual faucet/fountains and not from the larger diameter supply plumbing within the main school building or the two out building units. Results of the consecutive sample monitoring are listed in the table below.

Consecutive Sample No.	1	2	3	4	5	6	7	8	9	10
LOCATION	LEAD RESULT (PARTS PER BILLION; ND = NOT-DETECTED)									
Classroom 22 Sink Faucet 01CF001)	1	ND	ND	ND	ND	ND	ND	ND	ND	ND
Classroom 12 Sink Faucet (01CF013)	2	1	ND	ND	ND	ND	ND	ND	ND	ND
Room 2A Sink Faucet (01CF035)	5	3	2	3	2	2	2	2	2	2
Classroom 38 Sink Faucet (01CF037)	9	1	1	ND	ND	ND	ND	ND	ND	ND
CLASSROOM 31 Sink Faucet (01CF052)	4	3	2	2	2	2	5	6	4	3
Unit 3 Kitchen Faucet (03KC058)	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND

- A form is required for **each sample site** (Collection Site, Sampling Point, and Date/Time must be the same for all samples with this form).
- **Complete all parts of this form which apply, especially collection date and time.** Samples not properly identified or not having clear test requests MAY NOT be tested.
- Fill in your email address if you would like a copy of the report emailed when completed.
- **For additional information contact your local county health department, the Drinking Water Laboratory at (517) 335-8184 or visit our web site: www.michigan.gov/deq ⇨ About the DEQ ⇨ Information tab ⇨Laboratory Services ⇨ Drinking Water**

Please allow 3-10 business days for results, depending on the complexity of the testing ordered.

SAMPLE COLLECTION INSTRUCTIONS

UNIT#	INSTRUCTIONS
30	1. **This testing unit contains preservatives (tablet) in the sample bottle.** Do not rinse the bottle with sample. Do not open the bottle until ready to collect the sample. Do not touch the inside of cap or bottle. 2. If not collecting sample from a tap (lake, pool, etc.), plunge bottle mouth down, move in continuous arc down and back up from water, discard top half-inch or to 100 ml line. 3. If using a sample tap, select a clean (disinfect as necessary) faucet and remove such attachments as aerators, dishwasher connectors, etc. Allow water to run for about ten minutes at full flow from the sampling tap. Reduce flow to avoid splashing, and collect the sample directly into the bottle. Do not use an intermediate container. Do not allow water from the outside surface of the faucet to drip into the bottle. **Fill bottle only to the bottom of neck, or to 100 ml line.** 4. Most bacteriological testing has a **30 hour EPA hold time.** Samples must be received at the laboratory before the hold time expires. Surface water samples must be received at the laboratory within 6 **hours** of sampling, and **before 3PM Monday thru Thursday.**
32*, 33* 36AC* 36CN* 36HA* 36HB* 36LP* 36ME 36PT*	1. **Sample bottle may contain preservative** (refer to unit label on bottle). Do not rinse bottle with sample. Do not open the bottle until ready to collect the sample. Do not touch the inside of cap or bottle. 2. Select a clean faucet and remove such attachments as aerators, dishwasher connectors, etc. Allow water to run for about ten minutes at full flow from the sampling tap. Reduce flow to avoid splashing, and collect the sample directly into the bottle. Do not use an intermediate container. Do not allow water from the outside surface of the faucet to drip into the bottle. **Fill bottle to the bottom of neck.**
36TO* 36VO* 36VO-NP* 36VO-MEE*	1. **The sample vials contain preservative. Tap each vial in upright position to drain preservatives from cap. Do not rinse vial before collection.** 2. Do not open the vial until ready to collect the sample. Do not touch the inside of cap or vial. Select a clean faucet without attachments or leaking stem. Allow water to run for ten minutes at full flow. 3. Reduce flow and collect the sample directly into all vials provided. a. For 36TO, fill vial until water rounds at the top of vial. b. For 36VO, fill vial HALFWAY. Add 4 drops of the provided acid from small dropper bottle. Completely fill vial until water rounds at the top of vial. 4. **Cap and invert to check for air in vial.** THE SEPTA (RUBBER PART INSIDE CAP RING) MUST BE SMOOTH SIDE DOWN IN CONTACT WITH SAMPLE TO AVOID POSSIBLE CONTAMINATION. 5. **Samples containing an air bubble may not be analyzed.** If air is observed in inverted sample, remove cap, add water (**DON'T DUMP SAMPLE**) and recap as instructed.
36CNa*	1. **Enclosed vial contains dilute preservative and caution should be exercised. This testing unit also contains preservatives in the sample bottle. Tap unit in upright position to drain preservatives from cap. Do not rinse bottle before collection.** 2. Do not open the bottle until ready to collect the sample. Do not touch the inside of cap or bottle. 3. Do not rinse the bottle with sample. Select a clean faucet without attachments or leaking stem. Allow water to run for about ten minutes at full flow from the sampling tap. 4. Reduce flow to avoid splashing, and collect the sample directly into the bottle. Do not use an intermediate container. **Fill to 1" below top of bottle. Cap and invert 5 times to mix sample with preservatives. Carefully add all preservative in vial to sample bottle. Cap the sample and mix sample. Rinse vial and return.**
36CC	1. Do not open the bottle until ready to collect the sample. Do not touch the inside of cap or bottle. 2. Select a kitchen or bathroom sink or a faucet from which water is typically drawn for consumption. **Sampling point should not have been used for a minimum of six (6) hours prior to sampling.** Do not flush the sample tap before sample collection. 3. **Complete a separate form for each sample.** Write the sampling point on the sample bottle label in the space for Sample ID. 4. **Samples must be received in the laboratory within 14 days of collection.**

* NOTE: Some tests require thermal preservation. If you received your kit with an ice pack, please ensure that the **Ice pack is frozen** prior to return shipment to the laboratory.

Michigan DEQ PEAS Incident Report

		Date & Time Stamp of PEAS call:	1/9/2015 17:27	Shift:	After Hrs.
PEAS Incident Number	12268	Date & Time Occurred:	1/9/2015 09:50	Ongoing?:	Yes
Related Incident Number(s)	NRC-1105270	District:	Kalamazoo		

Description of Incident (ind. cleanup efforts, whether call-back is requested...): Formic acid spill in I94 multi-vehicle accident

Tanker trailer carrying formic acid 95% liquid solution (UN1779) involved in multi-vehicle accident on I94 today. Unknown amount of formic acid released. Tanker was separated from tractor between Mile Markers 91 & 92. Tanker is sitting in median. Tanker was also involved in a fire. Accident occurred at 0950 eastern time. All impact to soil - no waterways impacts.

See also NRC-1105270 report also received on this incident.

DRAFT 1

A bill to amend 1976 PA 399, entitled

"Safe drinking water act,"

(MCL 325.1001 to 325.1023) by adding section 7a.

THE PEOPLE OF THE STATE OF MICHIGAN ENACT:

SEC. 7A. IN ADDITION TO THE SAMPLING AND ANALYSIS OF WATER CONDUCTED UNDER SECTION 7, AT LEAST ONCE EVERY 3 YEARS, A SUPPLIER OF WATER THAT PROVIDES WATER TO A PUBLIC SCHOOL IN THIS STATE SHALL COLLECT WATER SAMPLES FROM DRINKING WATER FAUCETS AT THE SCHOOL AND HAVE THOSE SAMPLES ANALYZED IN THE MANNER PROVIDED IN SECTION 7 FOR THE PRESENCE OF LEAD AND ALL OTHER CONTAMINANTS FOR WHICH THERE IS A STATE DRINKING WATER STANDARD. THE RESULTS OF THAT ANALYSIS SHALL BE PROVIDED TO THE DEPARTMENT AND TO THE PUBLIC SCHOOL.

TESTING INFORMATION

Metal	Result Parts Per Billion
Copper	90
Lead	7

What Your Results Mean:

- **"Not Detected" *means that no amount of that metal was found in your water***
- **The lowest number that the lab reports for lead is 1 ppb**
- **The lowest number that the lab reports for copper is 50 ppb**

- **The Action Level is the number that is used to help determine regulatory compliance**
- **The Action Level for Lead is 15 ppb**
- **The Action Level for Copper is 1,300 ppb**

- No matter what your lead result is, you should continue to use a filter until the Public Health Emergency Declaration has been lifted.

TESTING INFORMATION

Metal	Result Parts Per Billion
Copper	Not detected
Lead	Not detected

What Your Results Mean:

- "Not Detected" means that no amount of that metal was found in your water
- The lowest number that the lab reports for lead is 1 ppb
- The lowest number that the lab reports for copper is 50 ppb

- The Action Level is the number that is used to help determine regulatory compliance
- The Action Level for Lead is 15 ppb
- The Action Level for Copper is 1,300 ppb

- No matter what your lead result is, you should continue to use a filter until the Public Health Emergency Declaration has been lifted.

Aqua Gard®

Sustained Effective Hydration

Introducing Aqua-Gard®

- Aqua-Gard® **prevents dehydration** when used as directed
- Ready-to-use Hydration Gel – No water necessary when used as directed
- Hydrates effectively at significantly less than 50% the weight of water
- Product is sterile, shelf stable, and resistant to contamination while in use
- Can withstand harsh environmental temperatures
- Will sustain life where there is no access to drinkable water
- Great refreshing orange flavor
- Individually packaged in lightweight, damage resistant foil
- Serving size: 3.01 ounces
- No allergens, salt, sugar, fat, cholesterol, or gluten / only 20 calories per serving

How it Works

- Amino acids attach to water molecules promoting absorption and retention of water by human cells – providing **sustained effective hydration**
    - Gel breaks down slowly to keep cells hydrated longer
    - Prevents or eliminates muscle cramping due to dehydration
    - Minimizes heat stress more effectively than water
- There is **no water necessary** when consuming Aqua-Gard® as directed (see suggested use)
- Aqua-Gard® is more efficient than water as is absorbed differently by the human body. Amino acids carry the water molecules into the cells more efficiently than water is absorbed.

Amount Necessary to Achieve Hydration

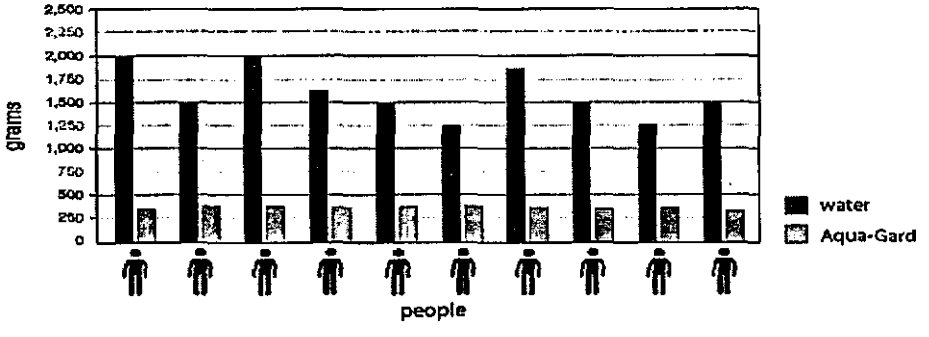

Chart Data Source: The Ohio State University – Sports Nutrition Clinical Studies – Aqua-Gard® vs Water

Aqua Innovations LTD - © Copyright 2016

Aqua Gard.

Sustained Effective Hydration

Logistic Benefits

- Easy to ship, easy to store
- Significant cost savings to transport (less weight and volume)
- Aqua-Gard® should pay for itself when considering weight and volume transport savings
- Shelf stable / long 36 month shelf life
- Product can be refrigerated and is stable in temperatures up to 160°F (71°C)
- Packages will resist damage when air-dropped, unlike most other hydration options
- Packets float

Aqua-Gard®

Will Sustain Life Where There is No Access to Drinkable Water

To: MSP-SEOCOPSC
Cc: MSP-EOC-MDEQ; MSP-EOC-MDCH; MSP-EOC-MDARD; Russo, Mark (MSP)
Subject: Request/Status Updates
Attachments: 6Feb16_FINAL_MASTER_UNIFED REQUEST LIST_Flint MI_UCG.pdf

Good Afternoon,

During our status update meeting the following questions were asked and I need additional clarification from state agencies:

#12- Clarification on Establish quality assurance system to verify safe water sources at impacted homes, schools and businesses. What is the metric? All homes, all businesses, a percentage of these facilities tested?

#37 – Infographics in clear format to demonstrate water testing results – Is the EPA map with test results enough for this?

#43 – Does Barbara Reynolds need to train state officials in the Governor's office and MDEQ? What is the timeline/schedule for the governor's staff?

Please call Lt. Russo tomorrow with any follow up questions.

Michelle Kuzera

Subject: Objectives

Please see the attached document of draft objectives for the next UCG operational period.

It would be helpful to identify what state agency/position should be working with the corresponding federal agencies.

Once that is complete, let me know and I'll add the objectives as task assignments into MI CIMS and we can document progress that way on both sides.

These may change slightly after this morning's tactics meetings but this is a good start.

Michelle Kuzera

Hi Mitch,

Attached are the three calls that the CHECC hotline has received related to skin irritation and concern that it has something to do with the Flint water. From the descriptions, they seem quite likely to be due to other factors, but just so you have them....please see attached.

To: plangc; MSP-EOC-MDEQ
Subject: *RE: Daily Summary Report*
Attachments: 2016-01-20 - Flint Lead MDHHS Sitrep.pdf

Good Evening,

Below are the statistics requested for the Governor's update, regarding elevated blood lead levels and the number of people tested for elevated blood lead levels (per the attached MDHHS Situation Report 1/20/16). Unfortunately, we do not currently have the ability to pull this data on a daily basis. Therefore, the below numbers are reflective up until January 8th. The CHECC is working to develop a process to obtain more updated counts on a more regular basis, so that those number can be given to the Governor in his daily report.

- People Tested for Lead 10/1/2015 to 1/8/2016: **2,642;**
- Children less than 6 years old ≥ 5 µg/dl since 10/1/2015: **28**
- Children 6 to 17 years old ≥ 5 µg/dl since 10/1/2015: **7**
- Adults 18 years and older ≥ 5 µg/dl since 10/1/2015: **15**

Thank you, and please let me know if you have any questions.

Subject: RE: Facebook video 2 - Citizen Testing Our Water
Attachments: JIC Official Statement - Total Dissolved Solids.pdf

The JIC has prepared an Official Statement (attached) for any media who contacts us on this issue. As far as I'm aware, ABC 12 was the only news outlet who has contacted us (last Thursday). We have also provided the statement to 211 for any calls they receive.

I did check the Facebook group mentioned in the below email to see if I could address it directly, but it is not a public group.

Subject: FW: Facebook video 2 - Citizen Testing Our Water

Jen I have attached a copy of a Facebook posting and video of what someone said about our cannedwater4kids canned water we donated to Flint Michigan.

We are afraid that because the citizens are very emotional and don't really understand what the testing system really means that they think our water is unsafe to drink or cook with.

We really want to help but we don't want to cause you any more problems. I am afraid if we ship more canned water we will make things worse for you and Flint, MI.

The purpose of my 501c3 nonprofit lean E-charity has been built on ensuring that all children in the world have access to clean safe drinking water.

Thank you very much for your understanding and good help.

Subject: RE: Updated Sample Results

Attached is all of the data available when I ran the query earlier today. It includes lead and copper since I am trying to have one report fill multiple purposes.

Linda,
Here is the updated information and there are two tabs. On one tab the data is sorted by concentration and on the other tab the data is sorted by zip code.

Mel,
I think we need to remove the address if we post this to the website, that is how we handled the November data that was posted. I believe that we should protect the privacy of the individuals that submitted samples when it comes to publishing personal information (addresses) on a website. There are no names but I just want to be sensitive to the issue.

Director, I leave the final decision to you as to yea or nay with respect to addresses on the website.

George

Subject: Potential Assistance Programs
Attachments: non_stafford_act_recovery_guide.pdf

State Emergency Management Coordinator:

As discussed in this morning's briefing, your agency has been identified to research potential assistance programs (private, state, federal, etc.) that may be available to address the short- and long-term recovery needs in response to the Flint water incident. Earl Zuelke, FEMA Long-Term Recovery, has made contact with some federal agencies to assist with this research. Feel free to touch base with him in the SEOC.

Attached is a copy of the Non-Stafford Act Recovery Guide. Appendix 2 (pg. 24-26) provides a list of some potential federal programs. This list is not all-encompassing; however, it will provide a starting point if any of these programs may apply to the response and recovery for this incident.

Provide the following information, *at a minimum*, on potential assistance programs for individuals and/or government support in response to this incident:

- Program Name
- Agency Responsible for program
- Point of Contact
- Type of Support (Individual or Government)
- *Eligibility Guidelines*
- Benefits Available
- Application Process

This information shall be submitted to Brianna Briggs, the Recovery Branch Chief, at briggsb3@michigan.gov by **COB Friday, January 15.**

Let Brianna (cell phone below) know if you have any questions on this request.

Thank you,

Brianna Briggs
Recovery Branch Director

Subject:	High Pb Level Home Visits for 2-16-16
Attachments:	High Pb Site Visits 020416.xlsx

The last two homes (results were received yesterday) of the Pb > 150 ppb sample results were visited today. The attached spreadsheet has been updated to reflect these two visits. We will start developing a plan for visiting homes with 100 – 149 ppb to start on Monday.

Has there been a definitive decision on whether the 10 additional teams which were proposed to start on Wednesday are going to happen? It would help out the EOC a great deal with planning if we knew for sure whether this was going to happen or not. Thanks.

Yes. It is attached. I spent some time revising the spread sheet yesterday so it looks a little different than the original you received yesterday.

There are two remaining homes that need to be visited today with higher than 150 ppb (w/i the 48 hr time period) which I will be doing personally this afternoon. That will be the only effort for this weekend since Team Rubicon will be demobing today and we do not have health dept. personal either. We are preparing to resume on Monday to address the 100 – 149 ppb Pb homes and will develop the plan for that this weekend.

Subject: RE: Full List of Residential Results for February 5, 2016

This note is for Friday, February 5, 2016

****NOTE** No. 3 needs to be sent to the following addresses: MSP-SEOCGIS@michigan.gov and MSP-SEOCGIS2@michigan.gov**

Please find attached the full list of residential results through the date listed above (5 attachments). Please note that this version includes concentrations in ppb and the street number is separated from street name to make it easier to find the address. Also, there are pdfs of the two worksheets for people who don't have Microsoft office. All have been prepped for the web minus the naming convention that is usually used. I will follow this format going forward. **If I fail to do that then please let me know**:

1. For the accordion on the lower left under the title "School and Residential Testing Results, the following are to Replace current and renamed to end with this date of February 5, 2016 (3 attachments):

   Asset # 512083 – February 5 2016 Test Results Flint.xlsx

Asset# 512511 – February 5 2016 Test Results Flint_Sorted By Address.pdf
Asset# 512510 – February 5 2016 Test Results Flint_Sorted by Lead Concentration.pdf

2. For the same accordion underneath the DEQ reports to EPA, The Test Results Flint DEQ Reports to the EPA Asset needs updating (1 attachment):

   Asset# 512820 - February 5 2016 Test Results Flint_DEQ Reports to the EPA.xlsx

3. The following is for the MSP-SEOCGIS for geocoding (1 attachment) and not prepped for the web; Please send to **MSP-SEOCGIS@michigan.gov and MSP-SEOCGIS2@michigan.gov**

   February 5 2016 Test Results Flint_For MSP-SEOCGIS.xlsx

Please note that the results are for all samples reported out through today February 5, 2016 in all documents. In addition, the workbooks (XLSX) contains two tabs: One has the data sorted by Lead concentration and the other is sorted by address.

Posting this data in a timely manner upon approval from the Governor's office is of the essence so that we can comply with the order issued by EPA.

Please post this to the website ASAP and make sure that all are posted so that people can look at the version that they are interested in.

Thank you!!!

Subject: Copper filtration
Attachments: Listing Category Search Page NSF International Standard 53 - Copper.mht; Listing Category Search Page NSF International Standard 58 - lead and copper.mht

Thanks Jen for the call today and for contacting us for this information, we are pleased to help.

You asked NSF International about what concentration of copper the NSF certified filters are certified for. Per the discussion with Rob Herman, Director of the Ann Arbor Labs and myself, the filters which have been distributed in Flint for lead reduction are not NSF certified for copper reduction. **They are certified for lead reduction. (note: these products may be certified for many contaminants other than lead, *just not copper*)**

NSF/ANSI Standard 53 and 58 specify 3000 ppb (3 mg/L) as the influent for copper with a maximum allowed filtered level of 1300ppb (1.3 mg/L) (USEPA MCL). Copper is a separate claim from lead but there are products that are NSF Certified for both contaminants.

There are several NSF/ANSI Standard 58 certified reverse osmosis (RO) systems that are certified for both lead and copper reduction. These could possibly be placed in homes with high copper levels to reduce the lead as well as the copper. These are typically under sink or counter top systems that are plumbed in to separate taps and are not available as faucet mount models. I have attached a file (web archive file) that shows the RO units that are certified to reduce lead and copper. It can be viewed online or offline.

Additionally, here is a link to the list of RO units that are certified to reduce lead and copper:

http://info.nsf.org/Certified/DWTU/Listings.asp?ProductFunction=058%7CCopper+Reduction&ProductFunction=058%7CLead+Reduction&ProductType=&submit2=Search

There are NSF/ANSI Standard 53 pour through filter pitchers that will remove copper but these do not also remove lead. Thus there would have to be a double-filtering of the water through each filtering system; one to remove the lead and a second pitcher to remove the copper – filtering the water through two systems. I have also attached a file that shows the pour through units that are certified to reduce copper.

And here is a link to the list of pour though units that are certified to reduce copper:

http://info.nsf.org/Certified/DWTU/Listings.asp?ProductFunction=053%7CCopper+Reduction&ProductType=&submit2=Search

Please feel free to contact me if there is anything else I can assist with.

Regards,

Derek DeLand

MSP-EOC-MDEQ

From: EWS Sales & Distribution <ewsdistribution@ewswater.com>
Sent: Friday, February 05, 2016 2:37 PM
To: MSP-EOC-MDEQ; Sobieski, Sue (DNR)
Cc: Rogers, Chad (DEQ); Matthew Quigley
Subject: EWS Water Inquiry
Attachments: Tearsheet_EWS_Essential_SS-2.5.MaxFlow.pdf

Good Day,

I am reaching out to you at the request of Matthew Quigley US Department of Commerce. I am working with Matthew February 22nd in connection with an event he is promoting, China "Sponge City" followed by the Detroit China Business Association Gala. With the efforts that Matthew has made we are being introduce to and becoming involved with the water quality issues in Flint MI. With Matthew's help I have introduced myself and my company to many decision makers within your community providing them with information on a product that will make a difference to the people in Flint with water quality issues.

I would like to introduce you to the Environmental Water Systems SS 2.5 Max Flow. The Max Flow is designed to be installed to the cold water inlet of every faucet[kitchen, bathroom, bar sink etc.] sold into the US market today. It is a complete package in the box with all standard fittings supplied. It takes about 5 minutes to install and no special tools are required.

I have attached a product tear sheet for your review, but in a nut shell here are the specifications; It reduces Lead >90% 2,500 gallons @2gpm and Chlorine reduction >95% 10,000 gallons @2 gpm.

Here is a brand new video from this year's International Home Builder Show discussing the Max Flow Filter.
http://www.proudgreenhome.com/videos/undercounter-water-filters-are-a-better-alternative-to-bottled-water/

I truly think that this may be a fit to help with the issues in the Flint MI. community allowing them to have safe drinking water from at least one faucet in each home.

Just a note; EWS Inc., Environmental Water Systems is a Nevada based, boutique company, with USA Made product that's been in business since 1987. We are distributed in over 700 domestic plumbing supplies, kitchen and bath showrooms throughout the US. Ironically we do not have current distribution in Flint MI.

To us this is a matter of health and wellness. In this case we are willing to deal directly with the government to provide the best and lowest price points. .We want to provide you product that works, will endure over the long haul, and help instill consumer confidence that their water quality issues are being addressed.

I plan on being in Flint with Matthew on Tuesday February 23rd with Matthew and would appreciate it if someone would be available for a brief conversation and introduction.

Thank you

Regards, Mark Truncale

Kathy et al

Please see item 6 in the attached. This updated plan was not shared with MDHHS Division of Environmental Health (DEH) until this e-mail from Bryce. We did not and cannot agree to "coordinate" home visits by GCHD. DEH is not coordinating visits by GCHD or EPA, and I do not have the resources to do so. MDEQ cannot commit DEH or GCHD resources to make home visits. I simply do not have the available staff.

Bryce is in the field in Flint. Talked with Liz Browne. DEQ team can re-visit houses already visited by EPA for the purposes of asking if residents are willing to be part of the "sentinel sampling" efforts and all that goes with that (plumber?).

Hi Kory

Based on an email I received from Bryce Feighner (copied) this morning the DEQ outreach efforts are changing

to not duplicate the efforts at the GCHD. Please confirm with him. Thank you.

OK. I am go to meet up with the DEQ group and continue on what we were doing yesterday.

You have my number, let's stay in touch.

I suggested to our SEOC they advocate that EPA, DEQ, DHHS and ATSDR coordinate our water sampling. Obviously, we should be able to go to each how a minimum number of times and collect data that works for all.

I gave them the names of:

Linda Dykema,
Mark Johnson,
Mark Ducharme
Mark Durno

Subject: Re: Fw:High Lead and Copper Results

There are 3 homes on the EPA sampling schedule for today that have requested a health consultation.

(sampled by VA Tech; not on the current GCHD visit list)

(business location; not on current GCHD visit list)

(3 children; on current GCHD visit list, indicated as being attempted but no answer)

I will plan to go out with the EPA sampling teams this morning, but I think that we should meet this afternoon to coordinate how we will be able to cover requests as they come up, as well as our response to rash inquiries.

Jim and Tony,

Attached are the *following items.*

- Home visit log
- PDF of "sorry we missed you letter" (some small changes were made to this)
- 3 info sheets
- Updated line list of Tier 1 homes

Please have your staff visit the two homes on the list. They should deliver water and complete the home visit log for each, including getting a contact number. They should also provide the information that Linda Dykema provided regarding the ETC follow up. This is key.
I won't be in the office Friday (I'm in Lansing), but can be reached at 317-931-9016. Two other follow-ups that need to happen is that Matt needs to follow up with the Nolan and Delaware homes to ensure that they have their results and Mary has one location that needs to receive a follow up call (please connect with her). That person could be connected with Linda and ETC regarding follow up testing and applying for remediation.
Thank you, Matt

Subject: RE: Fw:High Lead and Copper Results

Updated Tier 1 log is attached. It includes the information that I received from EPA regarding their site visits. There has only been one home that I know of that hasn't had at least one visit attempt. One of the GCHD teams visiting sites yesterday did not leave any materials or results if no one was at home. We may want to visit those places again. We are working on a "sorry we missed you" cover letter that we can leave at sites with no one home.

Here are the overall stats regarding making contact with the sites with very high lead values (>=150ppb). I believe there have been 43 unique locations (47 samples). Overall, ~56% have been successfully contacted by someone in person.

Category	Count	Percent
Attempted, No Answer (GCDH)	7	16.3
Initial Visit Completed (GCDH)	7	16.3
Attempted, Refused (EPA)	1	2.3
EPA Attempted, No Answer	10	23.3
EPA resample	17	39.5
Unknown (no visit)	1	2.3
Total	**43**	**100.0**

FYI... I did not receive any updated labs during the day yesterday, so I don't know how many new homes need to be contacted tomorrow.

Subject: High Lead and Copper Results

Linda and Jim,

Please see the attached spreadsheet containing all of the lead and copper data through the end of yesterday. When you scroll to the bottom of the spreadsheet you will see some exceptionally high results. The last one in particular is rather alarming as it not only has over 6 ppm of lead but it also has 22ppm of copper.

Director Creagh has asked that HHS and GCHD reach out to these homes immediately so that further investigation can be done and to ensure that these individuals are mitigating their exposure. Some of these home may have already been contacted but some of this data is new as of yesterday.

Thank you

Please find attached the full list of residential results through the date listed above (5 attachments). Please note that this version includes concentrations in ppb and the street number is separated from street name to make it easier to find the address. Also, there are pdfs of the two worksheets for people who don't have Microsoft office. All have been prepped for the web minus the naming convention that is usually used. I will follow this format going forward. If I fail to do that then please let me know:

1. For the web page http://www.michigan.gov/flintwater/0,6092,7-345-75251_75373---,00.html , found under the accordion lower left "Keeping lead out: Water Test Results and Reports"/ "Keeping lead out of the home: Tips and Residential Water Test Results", the following are to Replace current and renamed in the content page to end with this date of February 4, 2016 (3 attachments):

Asset # 512083 – February 4 2016 Test Results Flint.xlsx
Asset# 512511 – February 4 2016 Test Results Flint_Sorted By Address.pdf
Asset# 512510 – February 4 2016 Test Results Flint_Sorted by Lead Concentration.pdf

2. For the same accordion underneath the DEQ reports to EPA, The Test Results Flint DEQ Reports to the EPA Asset needs updating (1 attachment):

Asset# 512820 - February 4 2016 Test Results Flint_DEQ Reports to the EPA.xlsx

3. The following is for the MSP-SEOCGIS for geocoding (1 attachment) and not prepped for the web:

February 4 2016 Test Results Flint_For MSP-SEOCGIS.xlsx

Please note that the results are for all samples reported out through today February 4, 2016 in all documents. In addition, the workbooks (XLSX) contains two tabs: One has the data sorted by Lead concentration and the other is sorted by address.
Posting this data in a timely manner upon approval from the Governor's office is of the essence so that we can comply with the order issued by EPA.
Please post this to the website ASAP upon approval of the Governor's office and make sure that all are posted so that people can look at the version that they are interested in.
Thank you!!!

Hi Matt,

Attached is the information regarding the work done yesterday by the Initial High Lead Team. Kory Groetsch, DHHS, was also part of the team.

After learning yesterday of the extensive public health outreach already being conducted by GCHD, DHHS and USPHS, this Initial High Lead Team will now focus on gathering the necessary information so we can begin our "sentinel" monitoring program soon. They will provide bottled water, filters, cartridges during the visit.

If there is specific public health information you would like this team to communicate today, such as the ETC lead abatement program, I think it would be best if the DHHS member of the team conducted that work and communicated that message.

Thanks. Bryce

Subject: Home visits

Bryce and Mary,

Can you provide GCHD with a list of the homes that DEQ visited today (Thursday) so that they can be included in the outreach log? An updated version of the log is attached. GCHD plans on contacting the two new homes on the list tomorrow. Please advise regarding what DEQ will be doing tomorrow as far as outreach so we have a coordinated

response. The residents should be informed about applying for the ETC lead abatement program that Linda described yesterday.

Thank you,

Matt

Attachments: February_2_2016_Test_Results_Flint_DEQ_Reports_to_EPA_512820_7.xlsx

I think my message may not be very clear based on some of the responses. I'm not suggesting modifying the report again or the forms, but the results that get posted up to the website for people to look up. If you look at the attached excel file, this is the data that gets put up on the web. The two highlighted rows are two samples taken from the same address. Both have different lead levels, and there's no way to tell where the samples were taken from at that address, one from the kitchen? One from the bathroom? If an additional column could be added to this spreadsheet (also highlighted in the attached) to indicate where the sample was taken from, it might help prevent some of the calls we've been getting. This information is already on the sampling form that residents fill out, and we enter into our LIMS.

Thanks!
Kirby

Subject: RE: RESIDENTS sampling form

If we are getting questions and there is an easy fix as long as the lab sample report can accommodate the added data it makes perfect sense to me. It will also inform us as we are contacting some of these people as to where they took their sample(s).

That being said George has indicated some level of concern with us changing the forms too often. I will let him weigh in.

I am copying Susan Norton and Deb Mackenzie Taylor so they are aware of this discussion.

We. Need to bring Liz in on this. I believe we discussed using existing fields that are on the form for various purposes, including a sentinel sampling ID number and a sampling point like kitchen faucet or bathroom. I don't know what was finally decided, but Liz would. She is in charge of sampling.

No. Talking about adding a column to the data that is being posted to the web and calling it something like sampling point or sample location. The Lab is data coding this information into the LIMS from the forms that people send in with their sample(s). There are currently only two choices, Kitchen or Bath.

I don't know how many people are sending in multiple samples per home, but we have been getting calls on this. Just thought putting this one additional piece of information up with results might help get information back to residents quicker and help cut down on calls to the lab. Seems like a win win.

Thanks,
Kirby

Also discussed with lab staff answering calls, that some residents of Flint have submitted multiple home samples such as kitchen and bath. Is it possible to add a column for the sampling point on the results that are getting posted to the web. This is a data coded field. Residents may be seeing varied lead levels between two different sampling points in their homes, and these can't be distinguished currently based on what's posted.

Thanks!

Subject: RESIDENTS

I wanted to touch base and let you know we are still receiving calls from Flint residents regarding their lead/copper testing. Every customer I have spoken with had informed

me that Melonie told them to call us. I spoke with two residents today that stated they received DEQ Drinking Water Lab business cards and were told to call the number on the card. I had spoken with Melonie and she did state she had been given out our information and told the residents to call us. She also informed me that she was behind on sending out the reports and was working mostly by herself. I cannot imagine the workload she is trying to accomplish. However there is a lot of concern. The residents I have spoken with are getting frustrated. Not all residents have internet to check the results and have expressed frustration on given a phone number to call just to get another number to call. Some residents need help to interpret the result and a couple of residents just want confirmation the report is their report.

Mitch,

In speaking with others in the room here at the ECC we all do not have the exact same recollection of the request you have forwarded to the MSP. It appears the way your request to MSP GIS is worded that the Franchise Parcels that are on the Flint Water System would be excluded from the maps. We need to seek clarity and direction from the scientific staff on this to ensure there is agreement on this issue. I have carbon copied Bryce Feighner, Liz Brown and Dan Lord on this issue to seek their input before implementation of the request.

In the maps that I saw today with the "franchise parcels" appear in purple and seem to be on the borders of the City's municipal boundary but do extend slightly outside of that line. I've cc'd Richard Benzie because I believe he gave me an explanation today that these are areas technically outside of the City but on City water.

I've included the most recent map, and the one Keith plans on using tomorrow at the Mission Flint meeting.

I am asked to follow a new method, but I will forward what I have now to you guys.

It is the same as before:

1. For the web page http://www.michigan.gov/flintwater/0,6092,7-345-75251_75373---,00.html , found under the accordion lower left "Keeping lead out: Water Test Results and Reports"/ "Keeping lead out of the home: Tips and Residential Water Test Results", the following are to be added (3 attachments):

   Asset # 512083 – February 4 2016 Test Results Flint.xlsx
   Asset# 512511 – February 4 2016 Test Results Flint_Sorted By Address.pdf
   Asset# 512510 – February 4 2016 Test Results Flint_Sorted by Lead Concentration.pdf

2. For the same accordion underneath the DEQ reports to EPA, The Test Results Flint DEQ Reports to the EPA Asset needs updating (1 attachment):

   Asset# 512663 - February 4 2016 Test Results Flint_DEQ Reports to the EPA.xlsx

3. The following is for the MSP-SEOCGIS for geocoding (1 attachment):

   February 4 2016 Test Results Flint_For MSP-SEOCGIS.xlsx

The official note will get to the GIS folks and everyone else hopefully tonight. The website is messed up and I have to add some additional comments. I will cc you on that note.

Subject: DEQ Results sheet

THIS IS THE ONLY WAY I COULD SEND IT PLEASE BLACK OUT PI

Recommendation from EPA that DEQ modify this slightly to reduce confusion on this item, would assume this will need to be discussed with Linda Dykema shop then be uploaded into the form.

Recommend changing the sentence in the photo to read this.

Use only bottled water for drinking water for children 6 and under, including making baby formula.

From: Tom Page <tpage@uwmich.org>
Sent: Thursday, February 04, 2016 6:30 PM
Subject: 2-1-1 Update Flint Water Response for Thursday, February 4, 2016
Attachments: 2016-02-04 MI211 Flint Water Daily Update.docx

This is the daily 2-1-1 summary on the Flint Water Response for Thursday, February 4, 2016

GENERAL INFORMATION:

- **MLive confirms March 6 Democratic debate in Flint** between candidates Hillary Clinton and Bernie Sanders. Time and location have not been announced.
  http://www.mlive.com/news/flint/index.ssf/2016/02/flint_water_crisis_brings_demo.html#incart_river_home
- **EPA Reform Bill introduced** in Congress today by Reps. Upton and Kildee would require the Environmental Protection Agency notify the public when lead levels in public drinking water exceed federal standards, and to create a strategic plan for handling and improving information flow between water utilities, the states, the EPA, and affected consumers. The bill is co-sponsored by all 14 members of the Michigan House Congressional delegation. A companion senate bill was introduced by Senators Stabenow and Peter.
  http://www.mlive.com/news/kalamazoo/index.ssf/2016/02/flint_water_crisis_prompts_epa.html#incart_story_package

CALL VOLUME:

Aside from a minor challenge from staff members who were out sick, Central Michigan 2-1-1 was able to manage today's call volume with minimal wait times for Flint callers. Outside of Flint the call volume to Michigan 2-1-1 is following the traditional seasonal pattern of initial high demand at the start of tax season subsiding to normal volume with another major increase anticipated from April 1st until tax filing closes (this year on April 18th).

SPECIAL NEEDS/REQUESTS

- **2-1-1 called about suspicious behavior – Several Flint residents called 2-1-1 today concerned about people in green vests asking to come inside their homes. At least one resident reported they did not show identification. After investigating, we learned that EPA is testing residential homes for lead levels and were able to let residents know these were not scam artists or a danger.**

  REMINDER: Please let 2-1-1 know if an organization or agency will be canvassing or engaging in any out-of-the-ordinary activity so we are prepared to provide reassurance and accurate information, or report potentially dangerous or illegal activity.

- **Information and access to services for visually and hearing impaired residents** is an emerging issue. 2-1-1 has been contacted by a number of residents and caregivers asking for Flint water information in braille and other accessible formats like ASL videos.
  Please contact tpage@uwmich.org with resources or options for providing alternate access to Flint water information.

- 2-1-1 handles requests from deaf and hard of hearing individuals in several ways.
  - TDD/TTY is available at every center, but very few calls come in this way
  - 7-1-1 teleinterpreter is regularly used by callers to reach 2-1-1
  - Email is widely used as it allows direct communication between the deaf/hard of hearing person and the 2-1-1 agent
  - Live chat is available at most of the 2-1-1 partners which allows individuals to communicate directly and privately with a 2-1-1 agent in real-time

- A few 2-1-1s around the country are testing video chat with 2-1-1 agents skilled at sign language. We would like to implement this option. Our technology platform would support it, but do not currently have the resources to hire the needed staff.
- **Follow up: Skin Condition Plan** DHHS Bureau of EMS, Trauma and Preparedness provided a contact number for Flint residents to call with concerns about skin conditions. The number is 888-535-6136. It is available Monday-Friday from 8:00 am -5:00 pm.

RUMOR/SCAM CONTROL

This section is expanding today to include information on potential scams.

- Michigan Association of United Ways received word this morning that a web site www.flintwater.org was using the United Way and Red Cross logos to sell Flint water wrist bands, claiming a percentage of proceeds will go to help local residents. After verifying the logo was used without permission, MAUW notified the Attorney General's office and asked the site owner to remove any references to United Way. The owner complied and also received an educational letter from the Attorney General with information on the Charitable Solicitations Act and the legal risks of using trademarked logos without permission.
-
- No new rumors to reports
    - 2-1-1 continues to receive calls reporting a variety of rumors -- agents are providing the most accurate and up-to-date information available to answer questions and reassure callers.

UNRESOLVED

- ☐ **From 1/18/16:** Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will continue.
- ☐ **From 1/18/16:** One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?
- ☐ **From 1/20/16:** Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any properties are free from lead contamination. **Is there are state agency or partner *who can give real estate agency and home inspectors information on their potential liability.***
- ☐ **From 1/25/26:** Organizations distributing bottles to collect water samples report running out of bottles. **Is there a contact for individuals and organizations to get additional testing sample bottles?**
- ☐ **From 1/26/26:** Callers are asking about the efficacy of various water filters and whole-home filtration system to screen out lead. **Is there an state- or independently-vetted list of effective filters available for residents to reference.**
- ☐ **From 1/26/26:** There is high demand for shower filters due to reports of rashes and potential lead risk to children from using water to bathe. 2-1-1 is telling callers that shower filters are available for purchase through home improvement stores, based on a google search. **Are shower filter donations a request that can be coordinated through Good360 or another supplier? UPDATE:** The Michigan 2-1-1 office passed on the demand for shower filters to Good360, which is looking into options to meet this need.
- ☐ **From 1/26/26:** *Callers are asking about the availability of whole-home filtration systems.* **Is there any guidance on whether this is being considered as an option for residents?**
- ☐ **From 2/1/16:** 2-1-1 received a related rumor that due to the class-action lawsuits filed against the state, MDEQ will no longer be able to process lead tests for Flint residents. **Can SEOC investigate this rumor and determine whether or not it is true?**
- ☐ **From 2/1/16:** A few callers are expressing concerns about the reliability of MDEQ test results and are asking how to get independent lab testing for free or low cost

Subject: FW: Flint water in schools - proposed teleconference for 3pm on Friday
Attachments: SecureZIP Attachments.zip

Importance: High

Please read the following. Who can you recommend to participate in the suggested phone conference tomorrow?

From: Hainstock, Lisa (MDARD)
Sent: Thursday, February 04, 2016 3:53 PM
To: Golzynski, Diane (MDE); Priest, Thomas (MDE); MSP-EOC-MDARD; Yelton, Lori (MDARD); MSP-EOC-MDARD; Tederington, Thomas (MDARD)
Subject: Flint water in schools - proposed teleconference for 3pm on Friday

Hello

I am trying to schedule a teleconference between MDARD, the Genesee County Health Department, MDE, and someone from LARA who is working with DEQ (NEED DEQ/LARA NAMES AND CONTACT INFO ASAP FROM SOMEONE) on water investigation at Flint schools for tomorrow at 3pm to discuss the following:

1) Which agency is responsible for water sampling at which Flint school (I understand that LARA is working with DEQ on conducting water sampling at the schools in the attached spreadsheet – MDARD needs to verify so we can drop them from our list, if needed;

2) Getting a list of private/parochial/charter schools NOT being sampled by LARA/DEQ, so MDARD can conduct sampling. (the attached list is confusing, because it appears that there are some parochial, non-public schools, ie St. Paul Lutheran, St. John Vianney School are ON this list being done by LARA.)

3) MDARD is NOT conducting sampling like DEQ/LARA sampling (we only pull one sample from the food service area). Should ALL schools be sampled by DEQ/LARA because it is more comprehensive?

I need to hear back from everyone right away so I can send out the appointment and get us coordinating this issue before it gets more complicated.

Subject: RE: DEQ Document Release Process

Hi Meegan,

Thanks for getting back to us on the information flow chart for DEQ reporting – I appreciate it! I've copied Nicole on this note so that she is aware of your request for contact regarding the nightly residential water reports. We will immediately begin implementing the information flow chart (attached).

I've also routed your request for the maps of the sentinel sites in Flint through the DEQ ECC Incident Management Team. The sites are currently in the process of final review/approval. Once that occurs the GIS staff (lead by Dave Forstat) will ensure that you receive the maps as soon as possible.

Thanks again!
Kerry

From: Holland, Meegan (GOV)

To: Wieber, Kerry (DNR)
Cc: Brown, Melanie (DEQ)
Subject: RE: DEQ Document Release Process

Hey Kerry,

Thanks for the call today! I appreciate the heads up about how information can be routed. I'd like to be contacted if the nightly residential water reports spike at the actionable level of 15 ppb, and particularly for those above 150 ppb.

Also, we talked about getting a map of the sentinel sites in Flint. Can you ask the GIS folks to hustle on this? I know they're slammed but I'd love to get ahead of this messaging. I'm looping in Mel Brown, because she knows that I'm looking for such a map.

- Meegan

Subject: DEQ Document Release Process

Hi Meegan,

I'm currently serving as the PIO assigned to the DEQ ECC Incident Management Team. We are assisting in the flow of information and documentation from DEQ staff to the website, general public, and the Director. As part of this process, we have developed the attached "Information Flow Chart". To assist in taking some workload off from Mel, Nicole Colberg has been assigned as a document clearance only PIO for DEQ.

The reason for this email is that we understand from Liz Browne that the "Daily Residential Drinking Water Sampling Results" report has been sent to you and/or others in the Governor's office for review and to be posted to the website. Do you still want that process to continue for that specific report? Or are you comfortable with that report now going through the attached information flow process to be posted? Nicole can and will copy the following people if you are in agreement to using the attached process:

You, Melanie Brown, George Krisztian, Trevor Hawks, JICManager, Jennifer Wolf, Caleb Buhs, Jim Sygo, MSP-EOC-MDLARA, Dan Lord, Linda Dykema, Shelly Edgerton, Liz Browne, Karen Towne, MDEQ-ECC-IMT, Deb MacKenzie-Taylor, MSP-SEOCGIS, MSP-SEOCGIS2

We can also add any others that you deem appropriate. Please advise as to your preference for handling this.

Thank you!
Kerry

Subject: 2-1-1 Update Flint Water Response for Wednesday, February 3, 2016
Attachments: 2016-02-03 MI211 Flint Water Daily Update.docx

This is the daily 2-1-1 summary on the Flint Water Response for Wednesday, February 3, 2016

GENERAL INFORMATION:

- **Gov. Snyder introduced a bill today seeking $30 million** to provide a credit to Flint water customers back to the April 2014 switch to the Flint River. The credit/reimbursement would apply to the estimated 65% of the water bill for personal use and drinking.
- **Gov. Snyder held a second Tele-Town Hall** with Flint residents today from 6:30 pm – 7:15 pm. The governor's office provided advance notice to 2-1-1 to ensure additional staff were available to respond to calls. Michigan 2-1-1 monitored the call to identify key concerns and to note responses in order to ensure consistent information sharing with the public. Questions addressed:
  - Importance of getting water tested
  - Use of untested filtered water for different activities
    - OK: bathing, washing clothes and dishes
    - NOT OK: Drinking, cooking, washing fruits and vegetables
  - Reimbursement for past and current water bills
    - Referenced proposal to legislature for $30 million to reimburse/credit residents for water bills back to April 2014
    - For now need to pay bills until legislature appropriates funding and a process is in place to reimburse customers
  - Residents with additional questions can call 517-335-7858 or go to website michigan.gov/Snyder to use form to submit questions.

- **Congress held hearings today** on the Flint Water situation. Searchable video and partial transcripts are available at http://www.c-span.org/video/?404078-1/hearing-contaminated-drinking-water-flint-michigan&live

- The Detroit Free Press reported a young man in Holland, MI has developed a mobile app to help Flint residents find water resources. http://www.freep.com/story/news/local/michigan/flint-water-crisis/2016/02/02/iphone-app-helps-flint-residents-find-clean-water/79711664/
  - 2-1-1 has been contacted by a local public radio station to partner on developing a Flint water information mobile app. **Is anyone receiving this update aware of other efforts to develop mobile apps to assist with the Flint response? If so, please respond to tpage@uwmich.org to promote coordination and avoid duplication of effort.**

CORRECTIONS AND CLARIFICATIONS

From 2/2/16: The Environmental Protection Agency (EPA) contact information in yesterday's update was missing a digit.

EPA Safe Drinking Water Hotline: 800-426-4791

EPA Flint Email: flintwater@epa.gov

This number and email can answer questions about drinking water safety and will refer residents to the free testing kits being distributed in Flint.

The EPA Water Hotline provided an additional resource that has been added to the 2-1-1 Resource Database:
EPA National Lead Hotline: 1-800-424-LEAD (5989)

The lead hotline can answer specific questions about the effects of lead and lead poisoning. It is not an appropriate referral for basic water questions.

CALL VOLUME:

As seasonal demand for tax prep and utility assistance begin to decline, overall call volume is becoming more manageable again.

Following up on yesterday's analysis of Flint Water calls to 2-1-1 from January 9 - 31, 2016, today's update provides additional information related to 2-1-1's overall performance during this period.

Flint Water Calls to 2-1-1: Jan. 9 – 31, 2016

		Service Requests			
	Calls received	Referrals Made	Unmet needs**	Information only	Total Requests
Flint Water	6,634	7,771	863	928	9,562
Flint Daily Average	286/day	338/day	38/day	40/day	416/day
Flint % of all 2-1-1 calls	22.3%	21.9%	25.6%	22.2%	22.6%

- 83% of Flint water callers used the special prompt "If you are calling about Flint Water Press 5" set up to prioritize these callers for a rapid response.
- 2,304 used the "call-back" feature to keep their place in line without having to wait on hold.
- **Average wait-time** was 4 minutes 46 seconds.
    - This was during a period call volume to 2-1-1 peaked at more than 3 times normal. For comparison, callers for other 2-1-1 services such as tax prep assistance had an average wait-time up to 25 minutes.
- **Average Talk Time** was 3 minutes 18 seconds
    - Call length varied significantly with some lasting up to 30 minutes when callers presented with complex needs and emotional distress.

SPECIAL NEEDS/REQUESTS

- **Vendor Contact Established:** Vendors interested in selling goods or services to the state to aid in the Flint water crises can use the link at www.helpforflint.com to fill out with their information.
- **Skin Condition Plan announced** by State to investigate reports of rashes. Details are available in media release at http://www.michigan.gov/flintwater/0,6092,7-345--375520--,00.html.
    - **2-1-1 is ready and able to help investigators connect with members of the public experiencing rashes and other skin conditions. Many of the callers are past the stage of checking with their primary care provider and are seeing a dermatologist.**
    - **Is there a referral to DHHS or CDC investigators that 2-1-1 can provide to these callers?**
    - *Underscoring the urgency of this need, 2-1-1 was contacted today by a caller expressing suicidal thoughts in part due to feeling disfigured from the skin condition they attribute to bathing in Flint water. 2-1-1 initiated crisis intervention protocols and maintained contact with the caller until they were stabilized and in a safe location. A follow up contact is scheduled for the morning.*

RUMOR CONTROL

- No new rumors to reports
    - 2-1-1 continues to receive calls reporting a variety of rumors – agents are providing the most accurate and up-to-date information available to answer questions and reassure callers.

UNRESOLVED

☐ **From 1/18/16:** Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will continue.

- ☐ **From 1/18/16:** One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?
- ☐ **From 1/20/16:** Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any properties are free from lead contamination. **Is there are state agency or partner who can give real estate agency and home inspectors information on their potential liability.**
- ☐ **From 1/25/26:** Organizations distributing bottles to collect water samples report running out of bottles. **Is there a contact for individuals and organizations to get additional testing sample bottles?**
- ☐ **From 1/26/26:** Callers are asking about the efficacy of various water filters and whole-home filtration system to screen out lead. **Is there an state- or independently-vetted list of effective filters available for residents to reference.**
- ☐ **From 1/26/26:** There is high demand for shower filters due to reports of rashes and potential lead risk to children from using water to bathe. 2-1-1 is telling callers that shower filters are available for purchase through home improvement stores, based on a google search. **Are shower filter donations a request that can be coordinated through Good360 or another supplier? UPDATE:** The Michigan 2-1-1 office passed on the demand for shower filters to Good360, which is looking into options to meet this need.
- ☐ **From 1/26/26:** Callers are asking about the availability of whole-home filtration systems. **Is there any guidance on whether this is being considered as an option for residents?**
- ☐ **From 2/1/16:** 2-1-1 received a related rumor that due to the class-action lawsuits filed against the state, MDEQ will no longer be able to process lead tests for Flint residents. **Can SEOC investigate this rumor and determine whether or not it is true?**
- ☐ **From 2/1/16:** A few callers are expressing concerns about the reliability of MDEQ test results and are asking how to get independent lab testing for free or low cost

Subject: monthly test results spreadsheet with graphs

Sam,

Here is what I showed you. This is just for your reference, however I broke it down by month and threshold categories. The top graph is # of tests, the bottom is converted to percentages. The thresholds I use are as follows:

Total # of tests
≤ 15 (at or below 15ppb)
<5 ppb
5 to 15 ppb
>15 ppb

Results higher than 15ppb are considered actionable levels. At or below 15ppb is considered safe.

I hope this helps,
Sgt. Meka

Jen,

I have a version of the spreadsheet with graphs I came up with on my laptop so I can update it remotely when not on the SEOC computer desk top. Here is the most current version until other sample results come in. The one at SEOC is called "Water Test Results by Month With Percentages" where this version I added "and Totals" so I can tell the difference.

Attachments: Sitrep11_2-2-16.pdf

Please note the following:

- Operations Branch – "Coordinated with MDEQ and Michigan Department of Health and Human Services (MDHHS) regarding High Lead Homes Strike Team."

Robin Oeming, DEQ, will accompany this team and report on actions. Additionally, the SEOC (Capt. Kelenske) requested a plan for how homes with lead levels >150 ppb are being provided with the services and commodities they need. In response to that request, the SEOC contacted Genesee County EOC, EPA (High Lead Strike Team), and DHHS to discuss a joint Task Force approach including EPA (High Lead Strike Team), DEQ, DHHS health professional, plumber, and commodity distribution (bottled water, test kits, filters, etc.). It does not appear EPA will join the Task Force at this time.

Also with respect to schools, please note the following:

"Water Assessment Team - Discussed chlorine monitoring with the Administrator of Flint City Schools, who indicated he would prefer EPA not sample at schools, citing concerns with press, parents, and children. In order to proceed, he requested a meeting with MDEQ, a city representative, and EPA. We are waiting for the school district to respond with a time/date for the meeting.'

Subject: FW: 2-1-1 Update Flint Water Response for Tuesday, February 2, 2016
Attachments: 2016-02-02 MI211 Flint Water Daily Update.docx

This is the daily 2-1-1 summary on the Flint Water Response for Tuesday, February 2, 2016

GENERAL INFORMATION:

- SEOC provided information that Environmental Protection Agency (EPA) has set up an email and toll free number for Flint residents with water sampling questions.
  Phone: 1.800.426.479
  Email: flintwater@epa.gov

CALL VOLUME:

Today's report provides an analysis of Flint Water calls to 2-1-1 from January 9, 2016, the day the State of Michigan began referring residents to 2-1-1 for assistance, and the end of the month – a total of 23 days. 99% of calls (6572 of 6634) from Genesee County were related to the Flint Water Response. For ease of reporting, numbers in this report *include the entire county.*

Flint Water Calls to 2-1-1: Jan. 9 – 31, 2016

		Service Requests			
	Calls received	Referrals Made	Unmet needs**	Information only	Total Requests
Flint Water	6,634	7,771	863	928	9,562
All 211 Calls Statewide	29,767	35,467	3,375	3,529	42,371
Flint Daily Average	286/day	338/day	38/day	40/day	416/day
State Daily Average	1,294/day	1542/day	147/day	153/day	1,842/day
% Calls For Flint	22.3%	21.9%	25.6%	22.2%	22.6%

** The majority of unmet needs were reported during the first two weeks of the response. During the last week of January only 69 unmet needs were reported for Flint residents.

During the 23 days reported, Michigan 2-1-1 partners handled 9,562 requests for assistance from Flint residents. With roughly 1% of the state population, Flint generated 20% of the calls to 2-1-1.

Coordination of access and services among responders clearly benefited Flint residents. Early in the month up to 28.5% of calls resulted in unmet needs where there was no service or assistance available for callers. By the end of the month the rate of unmet needs had dropped to under 5%.

SPECIAL NEEDS/REQUESTS

- No special request or needs to report today

RUMOR CONTROL

- No new rumors to reports
  - 2-1-1 continues to receive calls reporting a variety of rumors -- agents are providing the most accurate and up-to-date information available to answer questions and reassure callers.

UNRESOLVED

- ☐ **From 1/18/16:** Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will continue.
- ☐ **From 1/18/16:** One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?
- ☐ **From 1/20/16:** Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any properties are free from lead contamination. **Is there are state agency or partner who can give real estate agency and home inspectors information on their potential liability.**
- ☐ **From 1/25/26:** Organizations distributing bottles to collect water samples report running out of bottles. **Is there a contact for individuals and organizations to get additional testing sample bottles?**
- ☐ **From 1/26/26:** Callers are asking about the efficacy of various water filters and whole-home filtration system to screen out lead. **Is there an state- or independently-vetted list of effective filters available for residents to reference.**
- ☐ **From 1/26/26:** There is high demand for shower filters due to reports of rashes and potential lead risk to children from using water to bathe. 2-1-1 is telling callers that shower filters are available for purchase through home improvement stores, based on a google search. ***Are shower filter donations a request that can be coordinated through Good360 or another supplier?*** **UPDATE:** The Michigan 2-1-1 office passed on the demand for shower filters to Good360, which is looking into options to meet this need.
- ☐ **From 1/26/26:** Callers are asking about the availability of whole-home filtration systems. **Is there any guidance on whether this is being considered as an option for residents?**
- ☑ **From 1/28/16:** Callers are asking for accurate information regarding a report that, "Undocumented immigrants in Flint aren't just being denied clean water, they aren't being tested for lead poisoning." This tweet included a link to a story about undocumented residents facing ICE raids: http://grist.org/cities/its-not-just-clean-water-flints-undocumented-immigrants-cant-access-medical-lead-testing/

  Resolved: Per JIC News Release # 27 dated February 2, 2016

  "[P]hoto identification is not required and no resident will be denied resources."

  "Flint residents can pick up water test kits, water filters, filter cartridges, and cases of bottled water. Also, residents can return filled water test kits at any one of the five water resource sites. Samples will only be accepted by using the official water testing kits provided at the water resource sites and by the water response teams."
- ☐ **From 2/1/16:** 2-1-1 received a related rumor that due to the class-action lawsuits filed against the state, MDEQ will no longer be able to process lead tests for Flint residents. **Can SEOC investigate this rumor and determine whether or not it is true?**
- ☐ **From 2/1/16:** A few callers are expressing concerns about the reliability of MDEQ test results and are asking how to get independent lab testing for free or low cost

Please forward to MDEQ ECC technical team and others as appropriate. Dow talked with us yesterday about two systems they are contemplating donating if they are determined effective and helpful in the community. This is one of the systems. The other is more of an industrial type system that serves larger areas of users. Let me know outcome so we can follow up with appropriate donations personnel.

Please check with George Krisztian on this. I received a resource request from SEOC in response to a request from George that Mike Glasgow, Flint Water Plant, requested a second volunteer. The attached email from Melanie, who works for Mike, is indicating a second volunteer is not necessary. I've requested the second volunteer and will proceed consistent with the SEOC request, but clarification of the resource need is requested. Thank you.

MSP-EOC-MDEQ

From: Tom Page <tpage@uwmich.org>
Sent: Monday, February 01, 2016 7:53 PM
Subject: 2-1-1 Update Flint Water Response for Monday, February 1, 2016
Attachments: 2016-02-01 MI211 Flint Water Daily Update.docx

This is the daily 2-1-1 summary on the Flint Water Response for Monday, February 1, 2016

Regrets that I was not able to compile an update for Friday, January 29. A prior work commitment had me in Manistee and Traverse City so I did not get back to Lansing until late evening as news reports broke of some Flint homes showing lead levels exceeding water filter capacity.

GENERAL INFORMATION:

- Following last Wednesday's tele-town hall by Gov. Snyder with 8,000 Flint residents that generated a substantial number of unanticipated calls to 2-1-1 after 5 pm, Michigan 2-1-1 had a conference call Friday morning with the governor's staff and reached agreement on how the state will coordinate with 2-1-1. Thank you to Meegan Holland, Director of Communications in Gov. Snyder's office for taking the lead on this.
- **A notification system to alert 2-1-1 when a state communication or event will refer residents to call 2-1-1.**
    - **Agreement:** The governor's office will coordinate to provide advance notice to 2-1-1 for major events and outreach initiatives such a community meetings, tele-town halls, and distribution of outreach materials that direct residents to 'Dial United Way 211'.
- **Clear identification of 2-1-1 as a non-governmental, independent service.**
    - **Agreement:** Moving forward state marketing materials will refer to 'United Way 211' to distinguish the service is an independent partner in the coordinated response. It was acknowledged that not all 2-1-1 partners are directed affiliated with United Ways, but it appears to be the best available option for now. At future town hall or other public events, 2-1-1/United Way 211 will be recognized as a community-based partner in the response effort.
- **State use of the 2-1-1 brand and logo.**
    - **Agreement:** State of Michigan will review if the Central Michigan 2-1-1 logo or other Michigan 2-1-1 partner logos have been used on other web pages or outreach materials. 2-1-1 partners will consult and determine if there is a preference for using the regional logo or to switch to the statewide Michigan 2-1-1 logo.

FYI: Michigan 2-1-1 can coordinate to provide 2-1-1 logos in high resolution eps or jpg formats.

- **A vetting process for 2-1-1 to review and approve how the service is presented by State of Michigan.**
    - **Agreement:** Given the volume and timeliness of releases, events and outreach materials produced on a daily basis, it is not feasible for 2-1-1 to review and provide feedback on all materials. The state will use the guidelines outlined above when referring to 2-1-1 and will provide as much advance notice as possible when an event or outreach initiative has the potential to generate an increase in call volume for 2-1-1, so 2-1-1 partners can ensure sufficient capacity and preparation is in place to provide an prompt and informed response to the public.
- **A mechanism to financially support the expanded 2-1-1 capacity needed to provide timely, high quality assistance that the high numbers of Flint residents calling 2-1-1 deserve.**
    - State of Michigan partners are reviewing funding options and will follow up with Michigan 2-1-1.

☐ Friday night a late-break news story reported a number of homes testing positive for lead levels exceeding the capacity of filters to remove the toxin. 2-1-1 immediately updated our referral information to follow the state recommendation unless a home has received a safe lead test result, they should immediately stop using filtered tap water and use only bottled water until testing shows a safe lead level.

CALL VOLUME:

Since the state issued the disaster declaration for Flint, Michigan 2-1-1 partners have handled roughly 10,000 calls from local residents. Tomorrow's report will have an update on overall call volume and call patterns.
Overall call volume remains exceptionally high. Demand for tax prep referrals and help for the now 20,000 customers dropped from their MEAP energy assistance program round out the big three reasons people are calling 2-1-1. Features like the 'call-back' option are being widely utilized to limit the amount of time callers wait on hold, but the amount of time it takes to speak to a 2-1-1 agent continues to be longer than our goal of 80% of callers reaching an agent in 90 seconds or less.

SPECIAL NEEDS/REQUESTS

☐ A few callers are expressing concerns about the reliability of MDEQ test results and are asking how to get independent lab testing for free or low cost.

RUMOR CONTROL

☑ Several sources reporting the new story of high lead levels persisting in homes stated it takes three (3) days to receive water test results. This conflicted with 2-1-1's information from MDEQ that testing takes 2-3 weeks. 2-1-1 was able to contact MDEQ through the SEOC to verify test results from the state MDEQ had take up to 3 WEEKS to process and report.

- Partner Good360 reports vendors have offered a discounted rate for home lead testing kits that indicate if water lead levels exceed EPA standards, but these tests only indicate if levels are above or below the standard, not the actual amount of lead in the water.

Could home testing kits be distributed to quickly identify homes with lead levels exceeding federal standards, allowing other residents to safely resume use of filtered tap water?

☐ 2-1-1 received a related rumor that due to the class-action lawsuits filed against the state, MDEQ will no longer be able to process lead tests for Flint residents. **Can SEOC investigate this rumor and determine whether or not it is true?**

If it is true, is there an alternative for Flint residents to have their water tested at no cost to themselves? ***See special need/request above regarding independent testing of water.***

☑ **From 1/28/16:** The rumor that, "Flint residents are barred from selling their homes and moving their families because it is illegal to sell with a known lead or copper issue", has been shown to be FALSE. Snopes.com has a detailed analysis and refutation: http://www.snopes.com/illegal-sell-homes-flint/

☐ **From 1/28/16:** As of today there is no response regarding last Thursday's report that, "Undocumented immigrants in Flint aren't just being denied clean water, they aren't being tested for lead poisoning." This tweet included a link to a story about undocumented residents facing ICE raids: http://grist.org/cities/its-not-just-clean-water-flints-undocumented-immigrants-cant-access-medical-lead-testing/

UNRESOLVED

☐ **From 1/18/16:** Is there a timeframe for how long bottled water will be distributed? Locals are asking how long this will continue.

☐ **From 1/18/16:** One of the top questions is when will canvassers be in specific neighborhoods. Callers would like to know so they can arrange their schedules. Is this information available for 2-1-1 to share?

☐ **From 1/20/16:** Michigan 2-1-1 heard an anecdotal report today that real estate agents are reluctant to close sales in Flint because they cannot verify the any properties are free from lead contamination. **Is there are state agency or partner who can give real estate agency and home inspectors information on their potential liability.**

☐ **From 1/25/26:** Organizations distributing bottles to collect water samples report running out of bottles. **Is there a contact for individuals and organizations to get additional testing sample bottles?**

☐ **From 1/26/26:** Callers are asking about the efficacy of various water filters and whole-home filtration system to screen out lead. **Is there an state- or independently-vetted list of effective filters available for residents to reference.**

- ☐ **From 1/26/26:** There is high demand for shower filters due to reports of rashes and potential lead risk to children from using water to bathe. 2-1-1 is telling callers that shower filters are available for purchase through home improvement stores, based on a google search. **Are shower filter donations a request that can be coordinated through Good360 or another supplier? UPDATE:** The Michigan 2-1-1 office passed on the demand for shower filters to Good360, which is looking into options to meet this need.
- ☐ **From 1/26/26:** Callers are asking about the availability of whole-home filtration systems. **Is there any guidance on *whether this is being considered as an option for residents?***

Subject:	Full List of Residential Results for February 1, 2016
Attachments:	February 1 2016 Test Results Flint_Sorted by Address.pdf; February 1 2016 Test Results Flint_Sorted by Lead Concentration.pdf; February 1 2016 Test Results Flint.xlsx; February 1 2016 Test Results Flint_DEQ Reports to EPA.xlsx
Importance:	High

This note is for Sunday February 1, 2016

Please find attached the full list of residential results through the date listed above (4 attachments). Please note that this version includes concentrations in ppb and the street number is separated from street name to make it easier to find the address. Also, there are pdfs of the two worksheets for people who don't have Microsoft office. All have been prepped for the web minus the naming convention that is usually used. I will follow this format going forward. **If I fail to do that then please let me know**:

1. For the Home page in the upper left Accordion, Under "In Your Home", the following are to be added (3 attachments):

   Asset # 512083 – February 1 2016 Test Results Flint.xlsx
   Asset# 512511 – February 1 2016 Test Results Flint_Sorted By Address.pdf
   Asset# 512510 – February 1 2016 Test Results Flint_Sorted by Lead Concentration.pdf

2. For the EPA TAB under DEQ Reports to the EPA [http://www.michigan.gov/flintwater/0,6092,7-345-73954_75358---,00.html], I don't see a posting for this to provide an asset number but this needs to be uploaded to this tab:

   February 1 2016 Test Results Flint_DEQ Reports to the EPA.xlsx

Please note that the results are for all samples reported out through today February 1, 2016 in all documents. In addition, the workbooks (XLSX) contains two tabs: One has the data sorted by Lead concentration and the other is sorted by address.

Posting this data in a timely manner is of the essence so that we can comply with the order issued by EPA.

Please post this to the website ASAP and make sure that all are posted so that people can look at the version that they are interested in.

Thank you!!!

Subject: EPA Order website

The EPA order that DEQ is under requires that we provide **"Identification of areas (e.g zip codes, neighborhoods)in the City with Elevated Blood Lead Levels".** The language appears in Section #53c. This is due to EPA by 1/31/16.

Attached is the Blood Count Report for compliance with the EPA Order. Note that there are 2 sheets: one for high risk zip codes and a second for the other zip codes we will be adding because there are some people in those zip codes on Flint water. Small counts are suppressed. We combined 48501 and 48502 because there are not many people living there, but we still consider them to be high risk.

Per Jeff Ellsworth (DHHS)--- Anne Nolan is the Office of E-MI expert assigned to DEQ. She said her understanding is that DEQ intends to use the existing /flintwater site to satisfy the requirements of the EPA order issued last week. She also said she has been told submissions to the site related to the order will go through **Caleb Buehs**, the PIO in DTMB.

Please contact me if you have questions regarding the DHHS report submitted to satisfy the EPA Order.

Hi Kyle,

We have confirmed a Congressional/Legislative conference call for 2:30 p.m. tomorrow. Please let me know if it will be Captain Kelenske who will give the operational update or someone else.

I will provide talking points for him this evening after the nightly numbers are in.

Thanks,
Shanon

Yes. We would like to possibly include DEQ and Michigan DHHS this time, in addition to Captain Kelenske. It would be similar to last night's press release - http://www.michigan.gov/flintwater/0,6092,7-345--375133--,00.html.

Hi Dan,

Just checking in to see if we are planning a Congressional/Legislative call for tomorrow afternoon. Captain Kelenske is available.

Please advise.

Thanks,
Shanon

A better future
Tap water redefined

Bluewater

Turning tap water into healthier drinking water

Benefit of Bluewater

Our body is around 70% water, our brain is 90% water. So it clearly makes sense to make the most of the water we consume to stay well, battle fatigue, flush out toxins, improve complexion and boost immune systems.

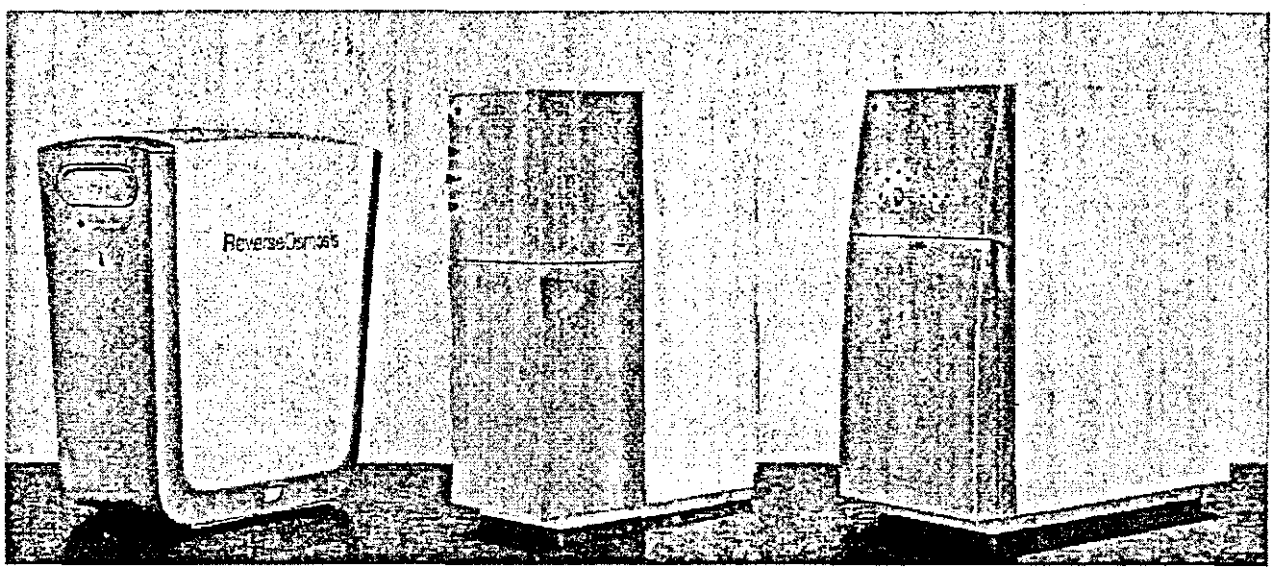
Water is vital to our health and wellbeing. Yet, critically, many projections by institutions such as the International Food Policy Research Institute warn that the world is facing rapidly deteriorating water quality that will increase risks to human health. Data in 2015 from NASA reveals how the world is running out of water as the world's largest aquifers are being depleted at alarming rates.

The unavoidable truth is that there is not an infinite supply of water. If quality is deteriorating, then increasingly we must take greater individual responsibility to assure our drinking water is safe and healthy to consume. And does not force us to use highly costly solutions like bottled water delivered in plastic that also endanger our planet's fragile environment.

Bluewater's leading-edge technologies remove over 99% of most known pollutants from tap water, including micro-organisms, pesticides, heavy metals and other toxins that threaten human health and impact taste. Our water purifiers have been engineered to deliver unmatched premium filtration, high flow capacity and direct flow with no need for a tank – all from a compact, great looking design. Our unique water purifiers and filtration systems are designed to limit waste water to extremely low levels, while our Pro model even turns brackish water into great tasting drinking water.

Bluewater's premium water purifiers are innovated with love in Sweden to help deliver enhanced health, wellness and peace of mind at home and in working or business environments.

Niclas Wullt
Managing Director
Bluewater



Bluewater's lineup of super efficient resident water purifiers encompasses (left to right), the Cleone, Spirit and Pro, all geared to remove contaminants from tap water that can endanger health or impair taste.

What's REALLY in our tap water?

Many of us take the safety of our tap water for granted. But what's really flowing from our faucets? Hardly a month goes by without a news report somewhere detailing how bacteria, pharmaceutical residues such as antibiotics and hormones, nitrates, toxic metals and other contaminants can be found in tap water.

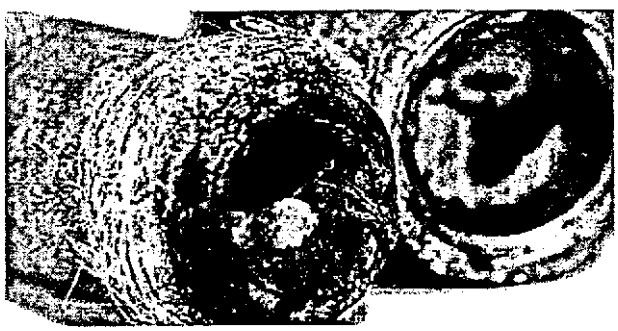
Public water management authorities do a good job of treating water destined for residential or commercial kitchens. Yet most use chlorine or similar to disinfect water of bacteria and parasites – and chlorine not only tastes bad, but is also poisonous in large amounts.

Germs are not the only problem. Lots of other nasty stuff can get into the water during its journey from the municipal works to the tap. WHO says just one-third of the world's fresh water can be used for human needs due to 'increased pollution from municipal and industrial waste and the leaching of fertilizers and pesticides in agriculture'.

Aging municipal water pipes are a serious issue. In the USA, as much as 30 percent of pipes in systems that deliver water to over 100,000 people are between 40 to 80 years old, according to the Environmental Protection Agency (EPA). And about 10 percent are even older.

The U.S. Water Quality Association (WQA) says 'water that leaves the treatment facility can become contaminated by the time it shows up at your tap'. The WQA view is supported by Consumer Reports that says 'dangerous contaminants such as lead, chloroform, arsenic, nitrate, nitrite, radon, and E. coli bacteria are common in tap water'.

Most of the world's municipal water treatment plants are simply not geared to remove all chemical and pharmaceutical residues. But ordinary citizens can help protect themselves – by using Bluewater's innovative reverse osmosis technologies.



Bluewater turns tap water into healthier, better tasting drinking water by removing the following contaminants.

Toxins

Pesticides and insecticides are leeched into our water environments despite the best efforts of the agriculture industry, which uses over 70 percent of all the fresh water on the planet

Bacteria & Viruses

WHO says 1.6 million people die every year from diarrhea-related diseases caused by drinking unsafe water and lack of basic sanitation giving free reign to hazardous microbes and bacteria

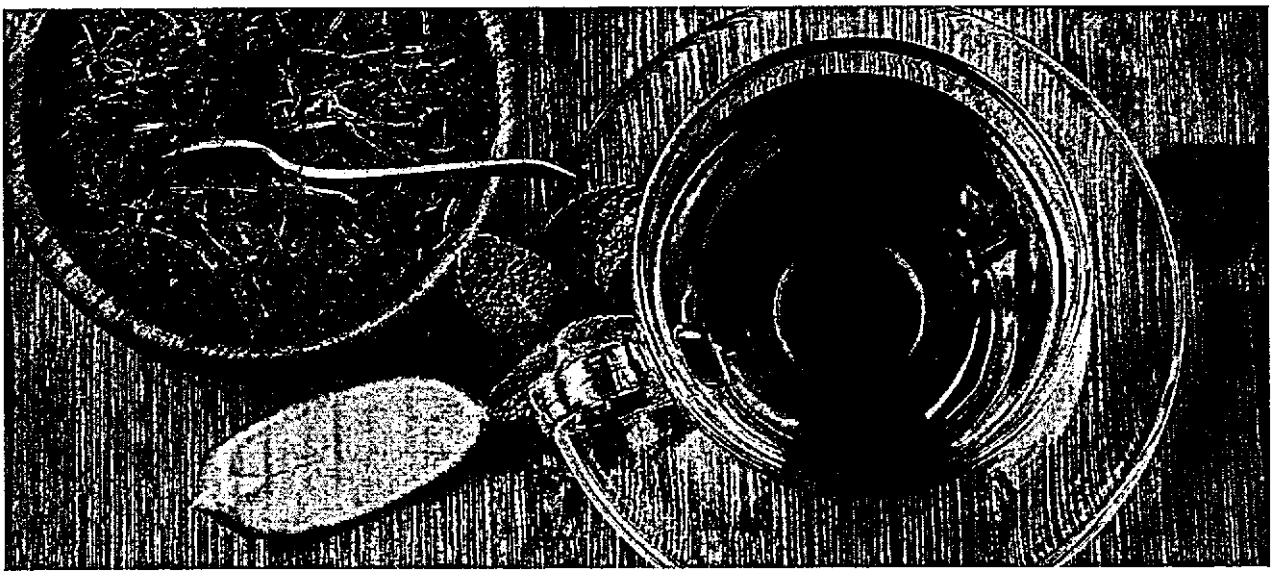
Toxic Metals

Lead, cadmium, mercury and arsenic accumulate in ground water and our bodies, with potentially fatal consequences. Nitrite exposure (usually found where water has been polluted by fertilizers) can cause blue baby syndrome in infants, which may spark heart problems leading to death

Smells

Organic or non-organic compounds can cause unpleasant tasting water

IFilter or Purify?



Consumers wary of drinking tap water are faced with a real dilemma when it comes to choosing between filtering what comes out of their kitchen taps or purifying it.

Many consumers believe they are making a healthier choice by choosing to filter their tap water using countertop pitchers with replaceable filter cartridges or buy bottled water. Yet, few people question the fact that most pitcher filter solutions do not remove contamination like lead, pesticide or pharmaceutical residues, bacteria or viruses. Nor do they query the inflated cost of bottled water, some of which comes from municipal water works anyway.

There is nothing intrinsically wrong with countertop or faucet water filters. However, such filters for the most part do not match the efficiency of reverse osmosis solutions that are designed to remove contaminants, including viruses, bacteria, pesticides, fluoride and different drugs and chemicals, to deliver really clean water as and when you want it.

At the end of the day, understanding the difference between water filtration and water purification is the big step towards being able to make an informed choice for a healthier lifestyle, not to mention better tasting coffee or tea.

Slashing Water Wastage

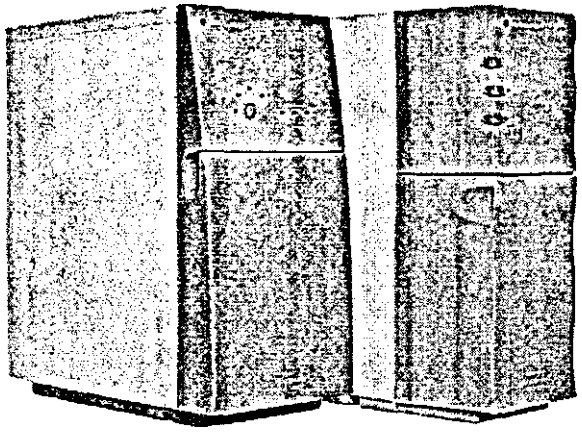
A complaint regularly thrown at reverse osmosis technology is that it wastes water. Bluewater's patented second-generation SuperiorOsmosis™ technology uses 82% less water than a traditional RO water purifier to flush out contaminants, which is good for environments where fresh water is in short supply.

Bluewater SuperiorOsmosis™
A super-efficient approach to purifying tap water

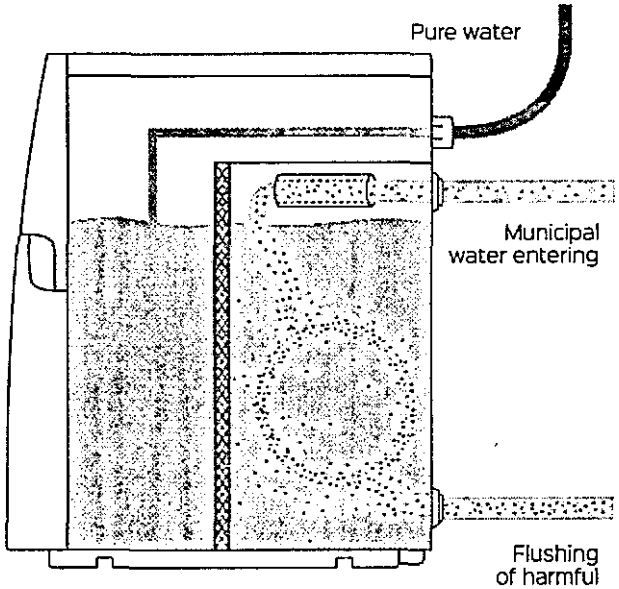
Reverse osmosis is widely considered the most effective method of purifying water due to the purification processes that remove virtually all pollutants including micro-organisms, pesticides, heavy metals and toxins – leaving safer, purer water.

Reverse osmosis technology purifies water by forcing untreated water through a semi-permeable filter or membrane. The membrane blocks chemical, and other contaminants as well as bad odors and tastes. The filter captures everything nasty down to 0.0001 micron (that's around 500,000 times less than the diameter of a human hair). Traditionally, a drawback to reverse osmosis filters is that they frequently use more water technology also ensures on-demand direct flow straight from the water mains to flush away the contamination filtered out than they provide for drinking, which is frankly wasteful.

However, Bluewater offers a superior, patented second-generation reverse osmosis solution that gets rid of unwanted contaminants, but doesn't waste water at the same rate as more traditional solutions. Bluewater SuperiorOsmosis™.



Bluewater's Spirit and Pro water purifiers harness the power of the patented SuperiorOsmosis™ technology.

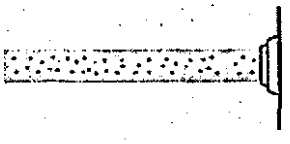


Benefits of SuperiorOsmosis™

- Economical water circulation system
- Extreme low level of wastewater
- Direct flow, no need of tank
- High capacity
- High clean water delivery rates
- Premium filtration levels
- Low energy consumption
- Low cost maintenance
- Compact design
- Cleaning brackish water

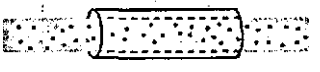
SuperiorOsmosis™

Step 1



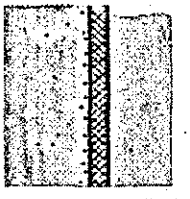
Water containing a variety of pollutants enters the system via inlet water

Step 2



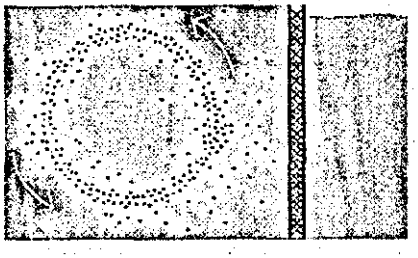
The biggest particles are removed using high quality pre-filters

Step 3



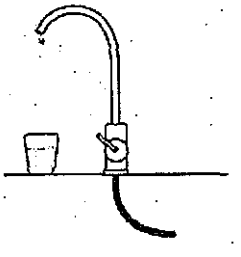
The premium membrane removes practically all known contaminants from the water

Step 4



The patented SuperiorOsmosis™ system continually cleans the membrane surface from harmful contaminants

Step 5



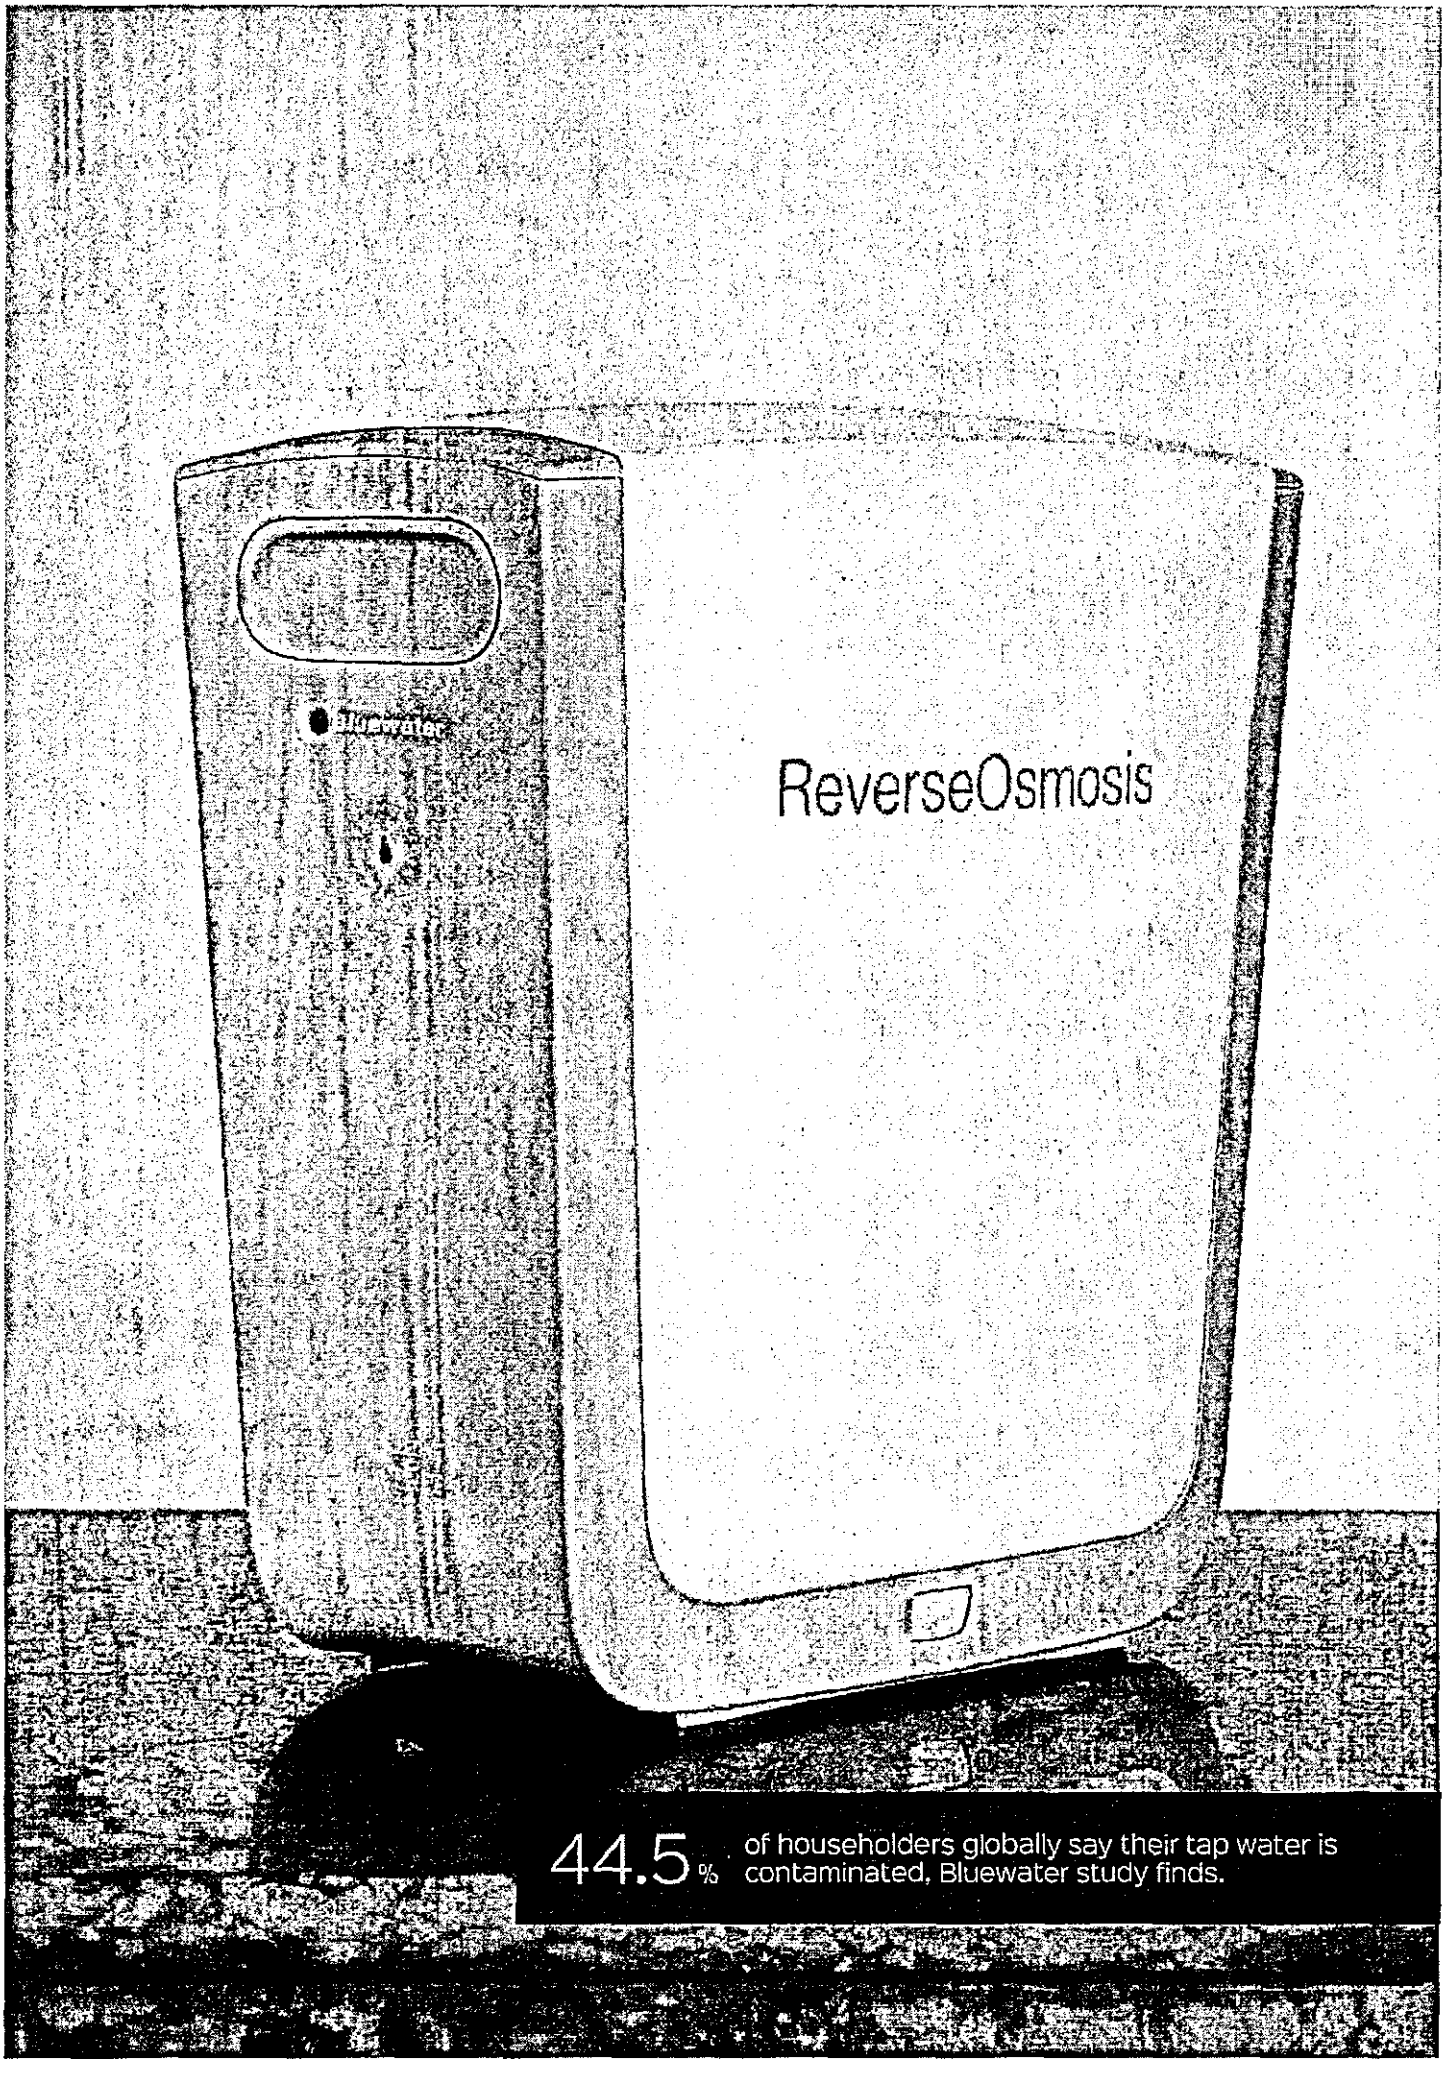
Bluewater's SuperiorOsmosis™ delivers pure drinking water directly to your faucet removing the need for a tank and ensuring healthier, tastier water that is always available.

IBluewater Cleone

Works great. Looks great. A high-performing classic, the Bluewater Cleone takes ease of water purification to the next level. Forget about chlorine tasting water or concerns about practically all chemical and biological contaminants. With proven function and built to last, the Bluewater Cleone is small in size but big on delivering cleaner, healthier water from the kitchen tap.

Harnessing the power of reverse osmosis, the Cleone fits snugly under your kitchen sink to reliably deliver pristine water for drinking or washing vegetables and fruits. Replacing filters and membranes every six months or so is straightforward and simple. In Italy, the Cleone is called 'the tank' because it never breaks down, working 24/7 all year round to deliver pure, fresh and tasty drinking water. In a market full of inefficient, water-guzzling, unattractive water purifiers, the Cleone reflects how our philosophy that there is no substitute for excellence when it comes to helping protect human health and wellbeing.

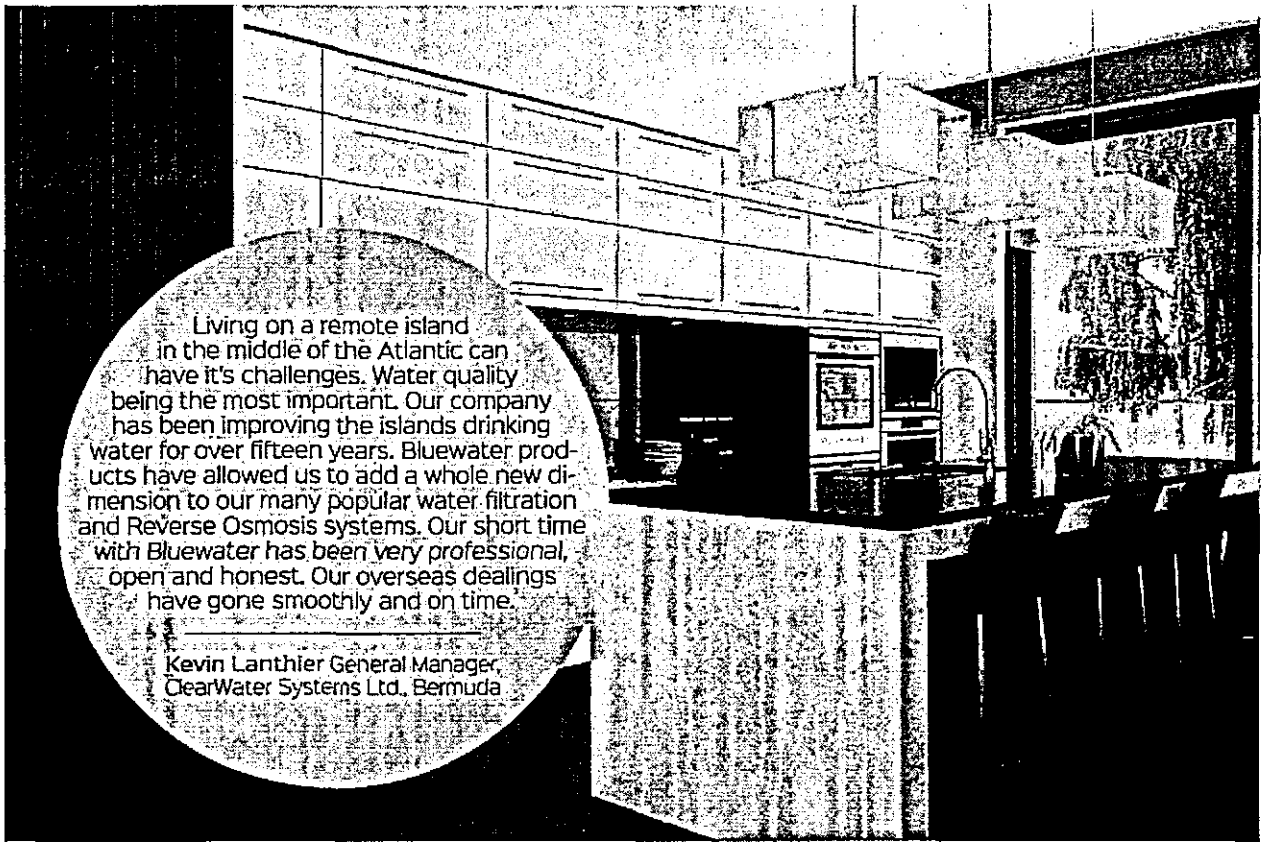
So why not join the hundreds of thousands of people worldwide who today rely on their Bluewater Cleone water purifiers for enhanced health and wellbeing at home. At the last count, Cleone's had a purification capacity of 24 million liters of water every day for people around the planet.



ReverseOsmosis
44.5% of householders globally say their tap water is contaminated, Bluewater study finds.

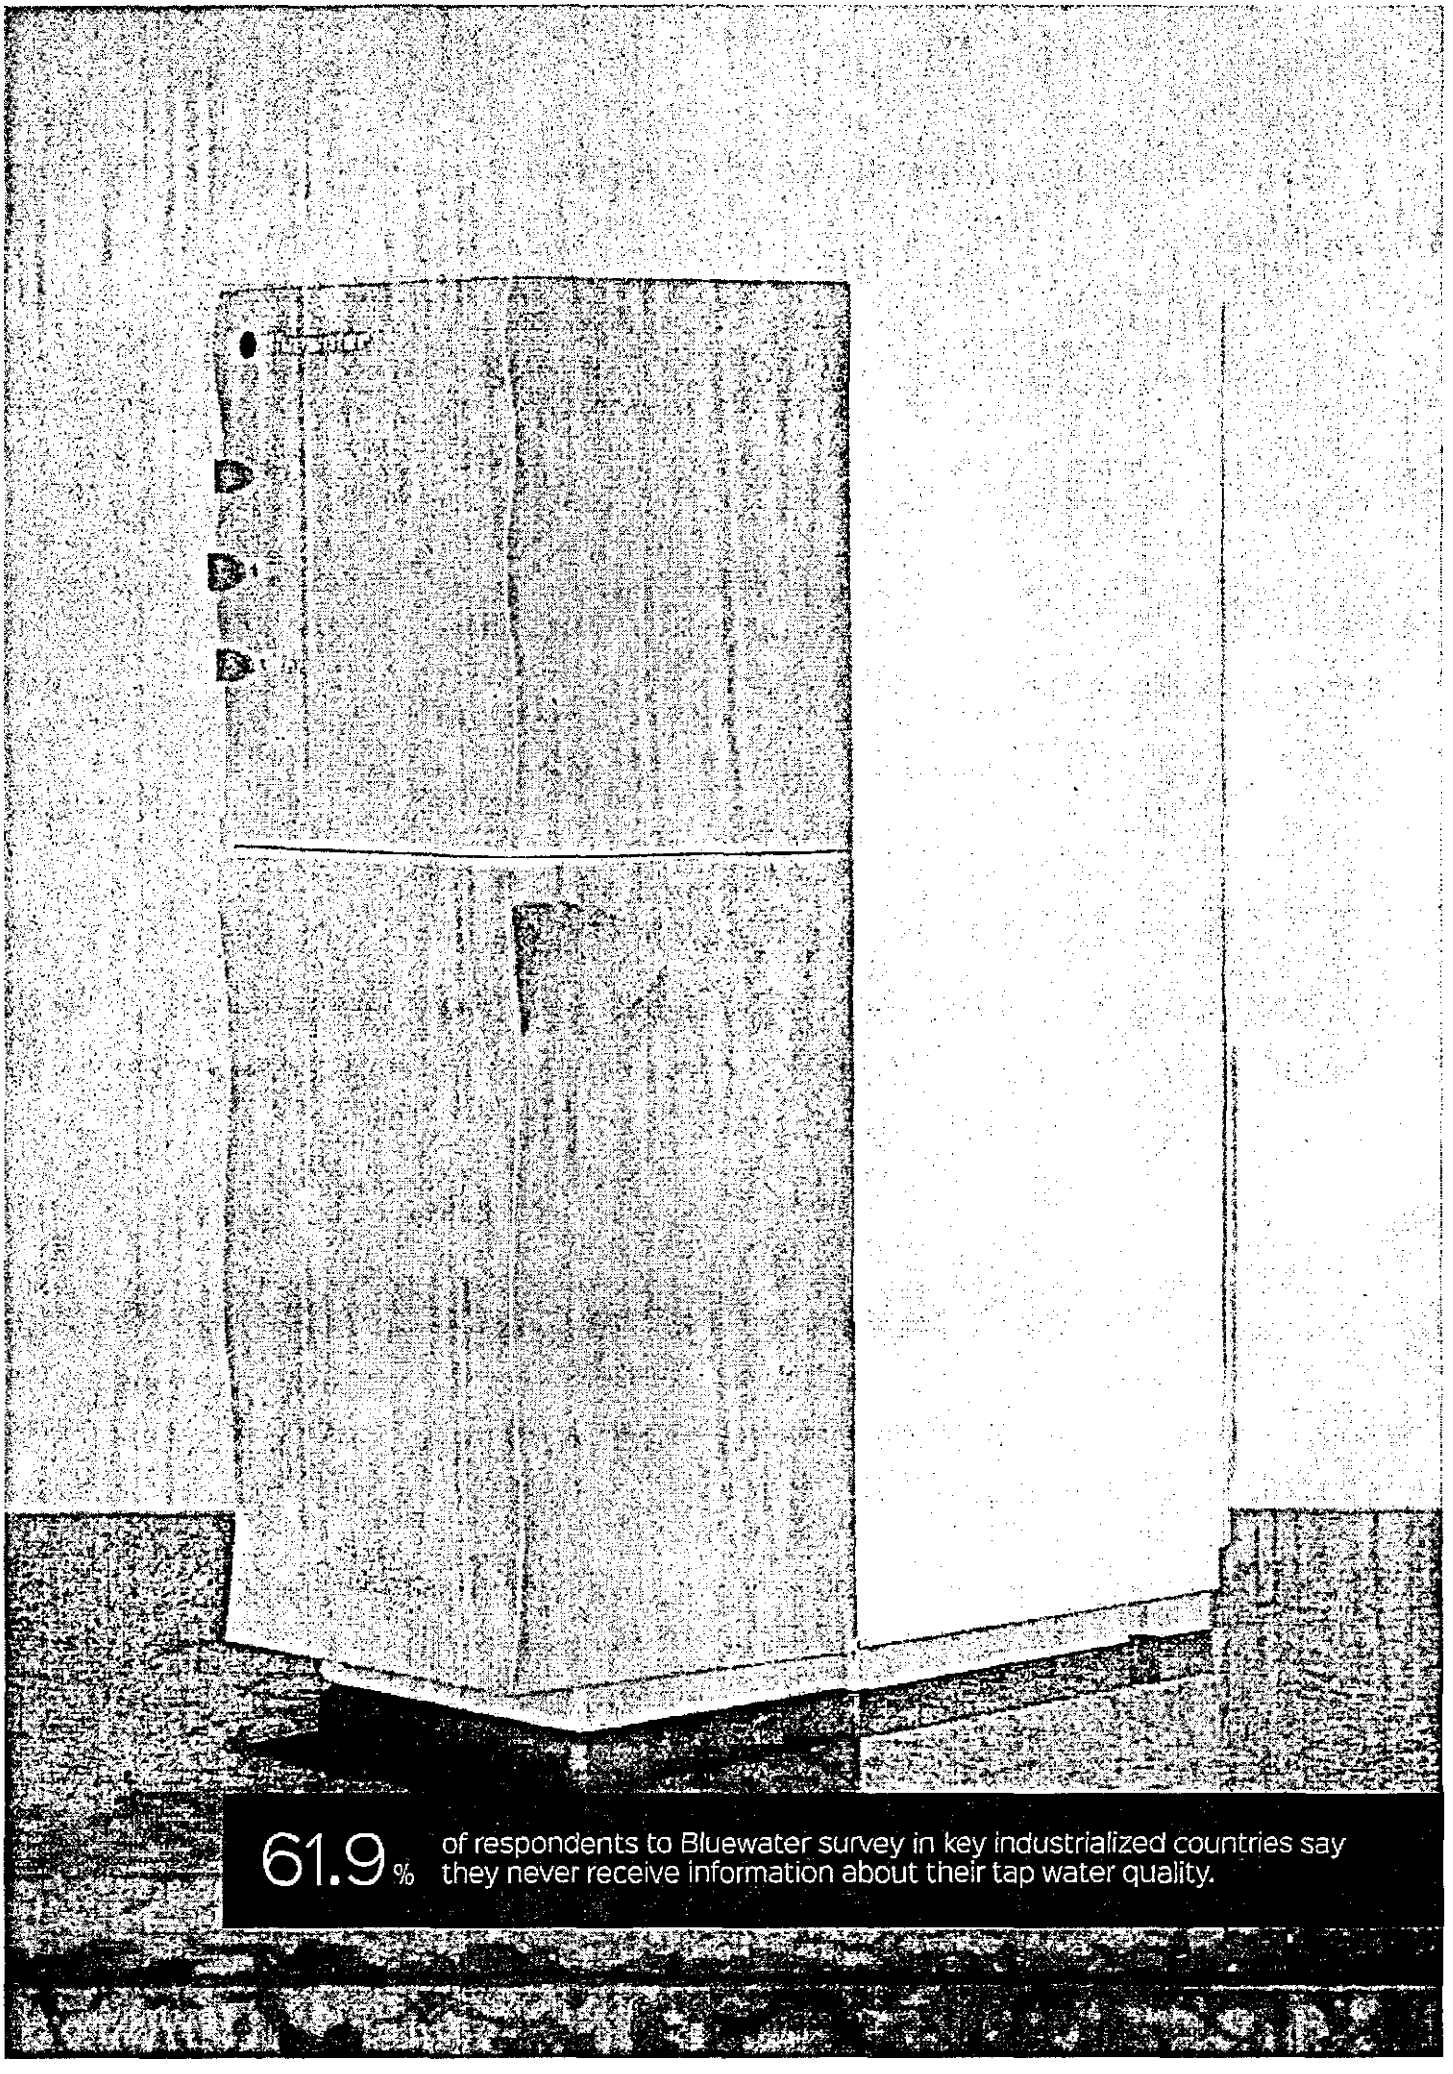
IBluewater Spirit

Powerful yet compact, the versatile Bluewater Spirit removes harmful pathogenic bacteria, unhealthy chemical contaminants and toxic metals from your drinking water. Probably one of the best investments you can make in your health and wellness, the Spirit turns municipal water into healthier drinking water. Beyond delivering on the highest performance expectations, Spirit's sleek, contemporary design means it will fit naturally into any kitchen environment. Easy to install and maintain, Spirit will deliver you 3 liters of direct flow pure water every minute (43.2 US gallons/hour) 24/7 all year around.



Living on a remote island in the middle of the Atlantic can have it's challenges. Water quality being the most important. Our company has been improving the islands drinking water for over fifteen years. Bluewater products have allowed us to add a whole new dimension to our many popular water filtration and Reverse Osmosis systems. Our short time with *Bluewater has been very professional*, open and honest. Our overseas dealings have gone smoothly and on time.

Kevin Lanthier General Manager, ClearWater Systems Ltd., Bermuda



61.9% of respondents to Bluewater survey in key industrialized countries say they never receive information about their tap water quality.

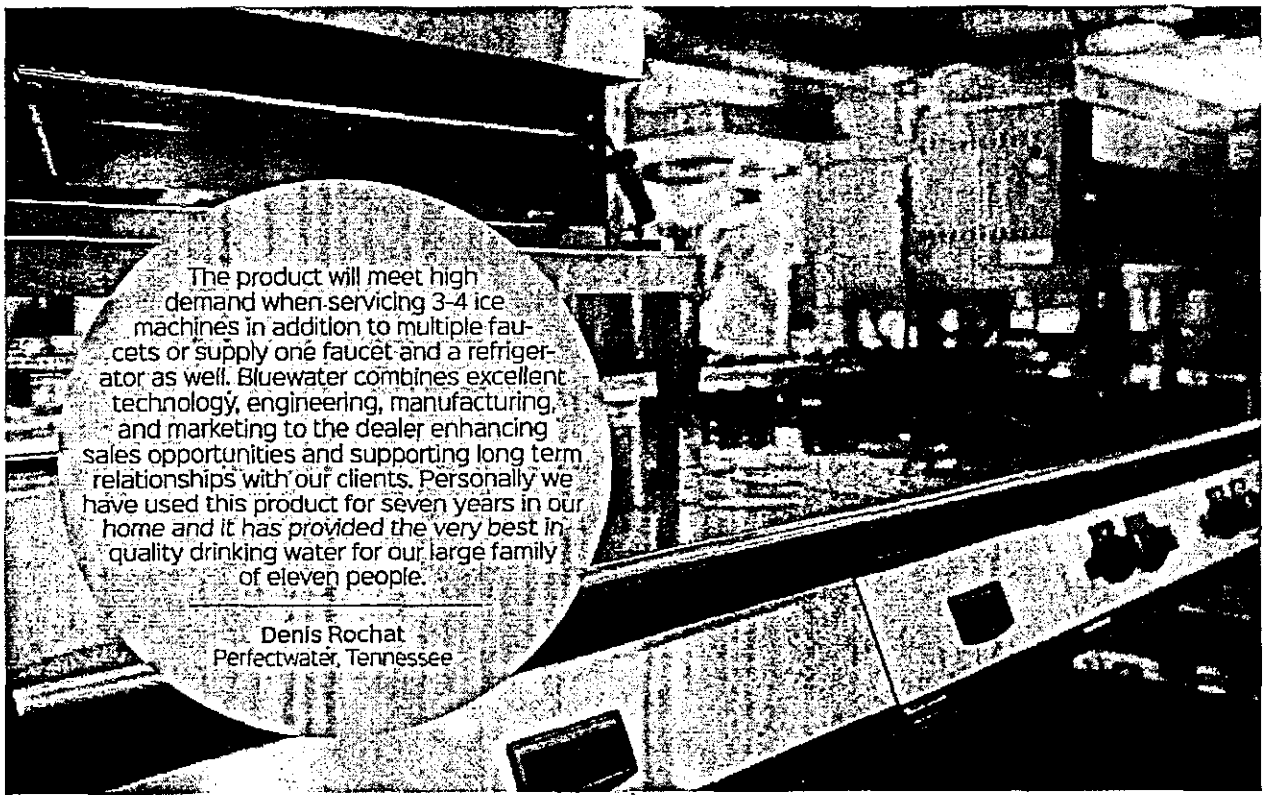
IBluewater Pro

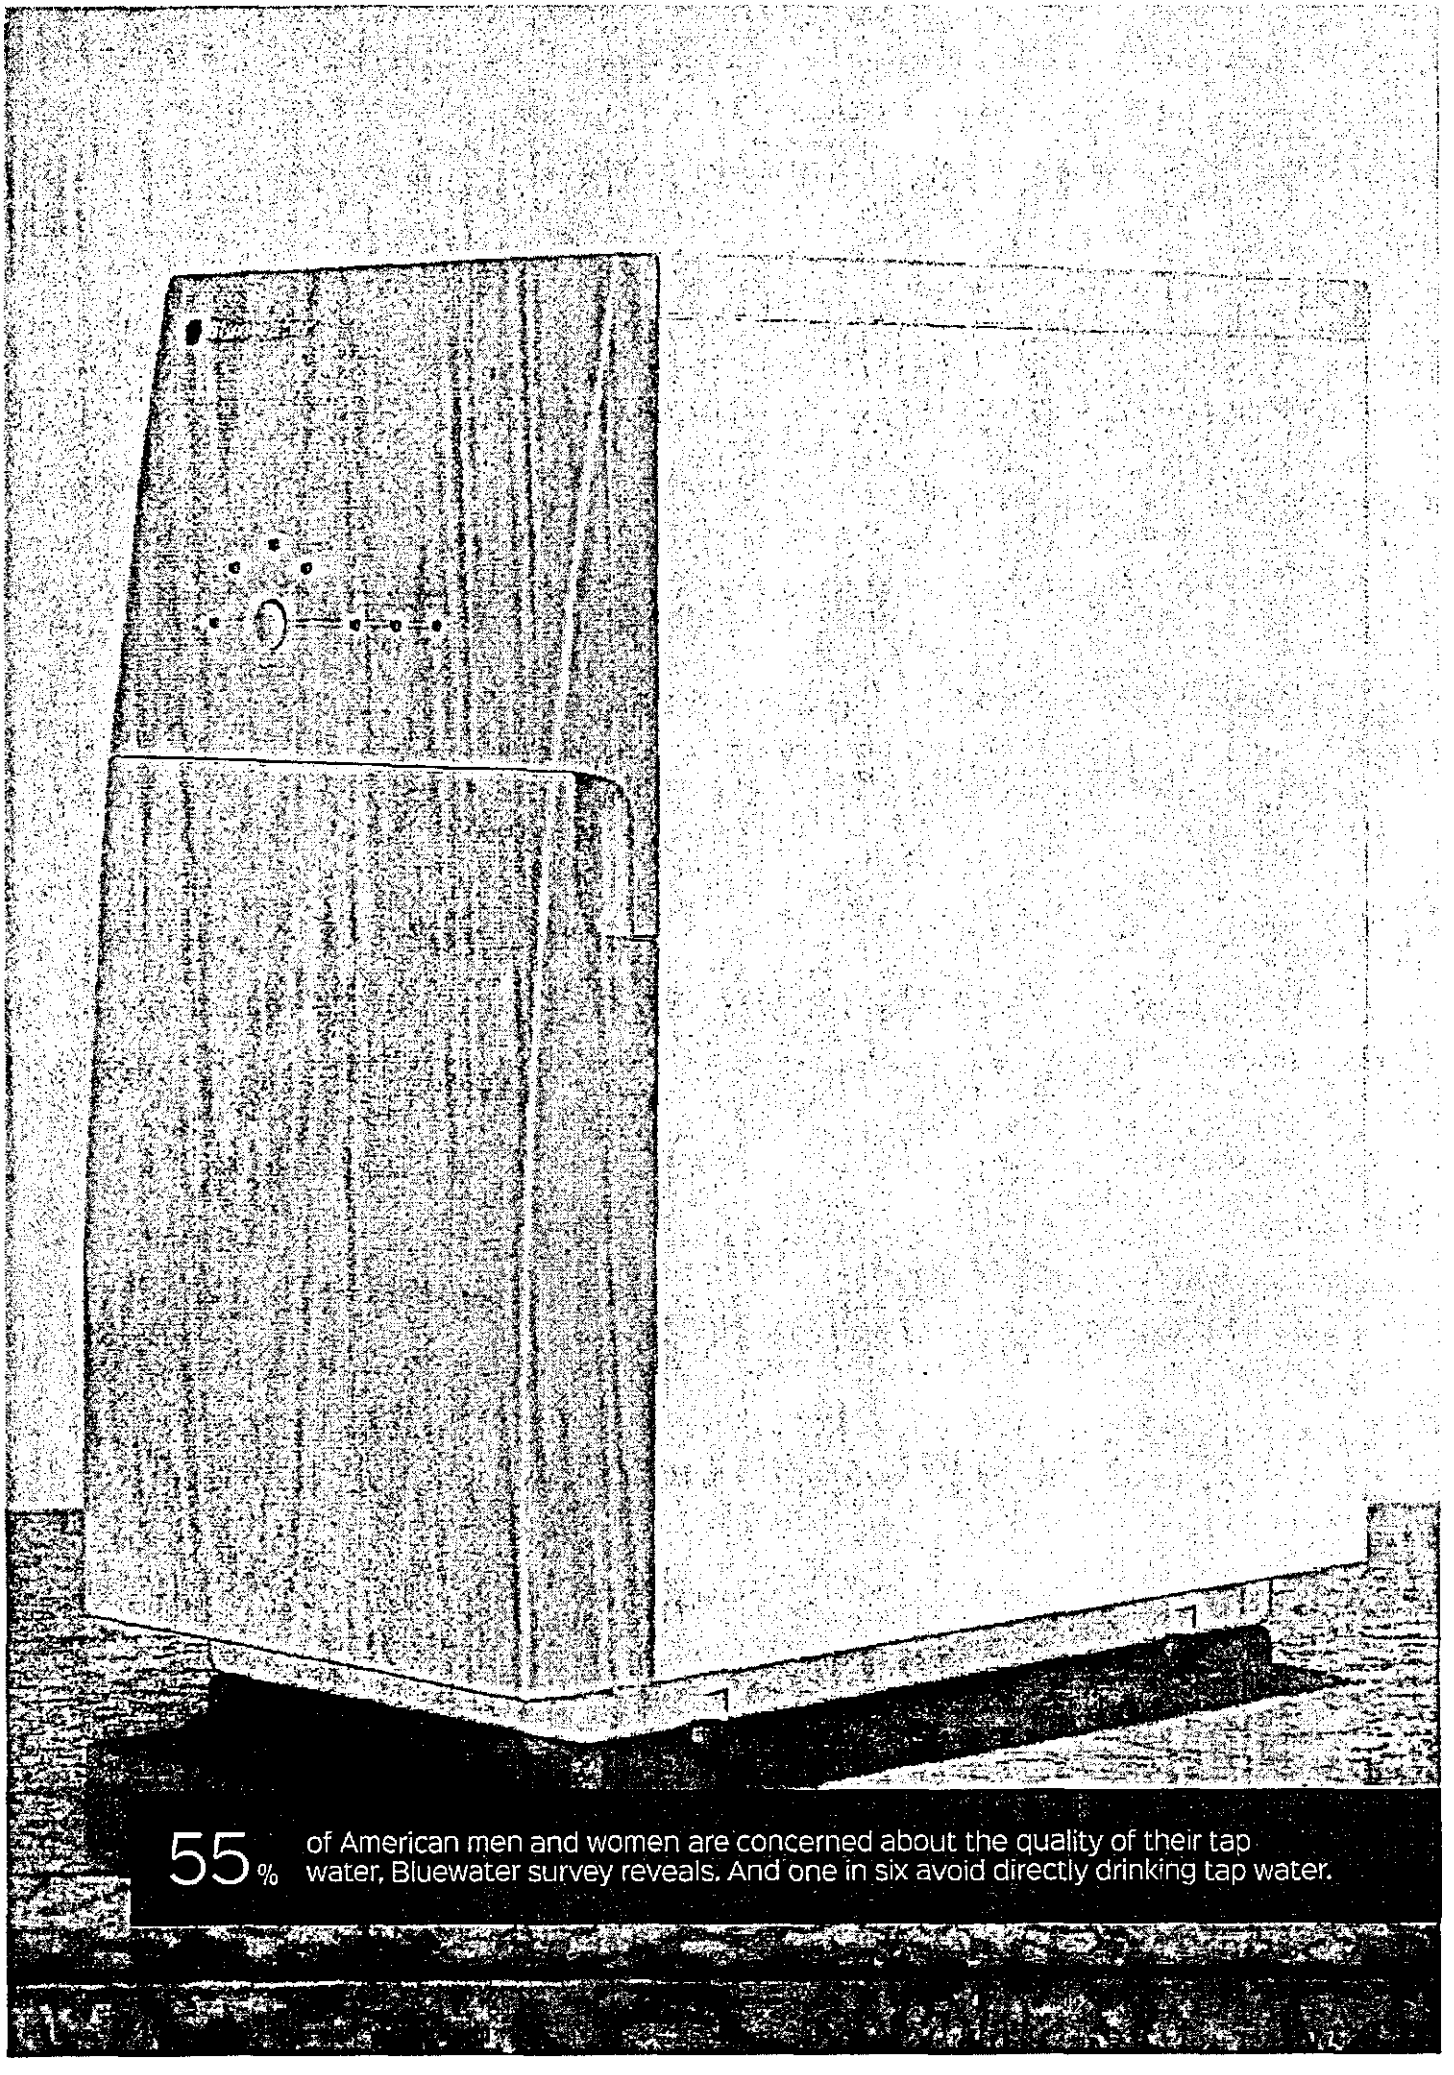
The Bluewater Pro is probably the most powerful compact water purifier available in the marketplace. Ideal for professional kitchens, hotels and hospitals, the Pro is also used to remove limescale from water to deliver pristine water for dishwashing, pressing and cooking. Pro can be used for steam generation *and cold fog (atomization) applications like* humidification in cheese factories or to create a whole house water purification system.

Installing, using and maintaining the Bluewater Pro is easy and straight-forward. And changing filters every six-months or so depending on water quality is a cinch.

Top chefs, wine makers and other professionals rely on the power of reverse osmosis to get pristine, clean tap water. For chefs, water is something they cannot work without, using it to boil, broil, sauté and bake with. Water provides body and texture and makes it easier for different ingredients to deliver a taste sensation. Chefs can also harness the powerful, on demand flow from the hardworking Pro to serve restaurant patrons exceptionally pure *water free of harmful substances in high-end,* reusable designer bottles rather than over-expensive bottled water.

It's said life started in the oceans covering over 70 percent of the surface of the planet. Most of that water is undrinkable, but the Bluewater Pro stretches the boundaries with its unique ability to turn brackish water into healthier drinking water. That's what we mean with 'innovated with love in Sweden'.





55% of American men and women are concerned about the quality of their tap water, Bluewater survey reveals. And one in six avoid directly drinking tap water.

PURE CLEAN WATER

HARD AS ICE AND SOFT AS SNOW, WATER IS LIFE!

MOST OF WHAT WE ARE IS WATER.

AND BECAUSE WE ARE WHAT WE DRINK, LET'S MAKE IT COUNT.

THE BLESSED JOY OF A COOL, REFRESHING GLASS OF WATER,

IN THE HEAT OF THE DAY OR NIGHT,

HELPS US FEAR LESS, HOPE MORE, HATE LESS, LOVE MORE.

WATER HELPS US RUN, DANCE AND MAKE LOVE.

WATER FIGHTS FATIGUE AND IRRITABILITY,

BRINGS LIFE TO OUR SKIN AND KEEPS EYES SPARKLY.

WATER SUSTAINS TREES, FLOWERS, FRUITS AND ECO SYSTEMS,

FUELS LIFESTYLES, AND HUMAN GROWTH.

CLEAN WATER IS COOL,

SEXY AND A BASIC HUMAN RIGHT. IT MAKES US

B E A U T I F U L.

OUR PASSION IS TO INNOVATIVELY DREAM, LIVE AND DELIVER PRISTINE WATER.

THAT'S WHY WE DO WATER LIKE NATURE INTENDED, PURE & SIMPLE.

B L U E W A T E R.

Purer, safer & healthier tap water
Innovated with love in Sweden

Bluewater's patented technology has been innovated with love in Sweden for a world where everyone has the right to drink water as pure as nature intended, free of bacteria, toxic metals and pharmaceutical and chemical residues.

Bluewater SuperiorOsmosis™ technology gives you cleaner, healthier water direct from your tap. Our second-generation reverse osmosis solutions help remove just about every known waterborne pollutant harmful to human health from tap drinking water.

Turning tap water into healthier drinking water, Bluewater innovates and markets premium water purifiers for consumers and businesses in Europe, the USA, China and elsewhere in Asia.

Subject: Today's Lead Results Greater Than 100 ppb
Attachments: Residential samples >100 ppb

Per the attached from the DEQ lab, today we had 3 results above 100 parts per billion (ppb):

Lead	1,234 ppb	2316 E SECOND ST	FLINT,48503
Lead	115 ppb	1110 SOUTH FRANKLIN AVE FLINT, 48503	
Lead	1,231 ppb	1006 KENSINGTON AVE Flint, 48503	

These numbers will be included in the spreadsheet that gets posted to the web this evening.

Subject: SBA Request

The Planning Section is requesting a statement from the DEQ on the most conservative date the scaling is anticipated to be build back up on the pipes. Our best answer follows:

At this time we cannot give a definitive answer to the question. There are still disagreements among the scientific community as to when a sufficient quantity of protective film from the addition of the corrosion control inhibitors will be built up to sufficiently reduce the concentrations of lead in the distribution system to a yet-to-be determined "safe" level of lead in individual faucets.

Thanks

Capt and Tony,

FYI

CALLER IS REPORTING THAT A DRAIN LINE BROKE AT A UTILITY SUBSTATION AND SPILLED OVER 100,000 GALLONS OF WATER THAT WENT TO THE FLINT RIVER. THE CALLER STATED THAT THE SPILLED WATER COULD HAVE BEEN CONTAMINATED AND COULD HAVE CAUSED CONTAMINATION TO THE FLINT RIVER.

SENSITIVE INFORMATION
THE DATE OF JULY, 1ST 2015 IS AN ESTIMATE OF WHEN THE CALLER KNEW ABOUT WHAT HAD HAPPENED.

I believe we will be seeing a lot of these reports.

Let us know if you want to consider any changes on the MDHHS side so that they're a parallel with >100 but <150 ppb.

Mark, Jamie, Chris,

Thank you again for your time on the call yesterday. A few comments/questions for your team:

- **RO system:** The product details for the residential RO system that we discussed are attached, and additional details can be found here: http://ecopure.com/product/reverse-osmosis-drinking-water-filter-system/ Please let us know what questions you have regarding this system.

- **Data:** Would it be possible to share a contact for data-related questions? Jim has combed through the data available online and has a few questions.

- **Additional Organization Suggestion:** The staff at Whaley Children's Center is working closely with the EPA to address issues at their facilities and already has a commercial water filtration system in place for their cooking needs. We will continue to explore opportunities for Dow technologies to assist Whaley, but wanted to know if you had any other suggestions (daycare, school, senior center, clinic, etc) with increased lead levels that may be in need of filters for drinking and cooking.

Best regards,

Kristen Bovid

Mark, Jamie, Chris,

Thank you again for your time on the call yesterday. A few comments/questions for your team:

- **RO system:** The product details for the residential RO system that we discussed are attached, and additional details can be found here: http://ecopure.com/product/reverse-osmosis-drinking-water-filter-system/ Please let us know what questions you have regarding this system.

- **Data:** Would it be possible to share a contact for data-related questions? Jim has combed through the data available online and has a few questions.

- **Additional Organization Suggestion:** The staff at Whaley Children's Center is working closely with the EPA to address issues at their facilities and already has a commercial water filtration system in place for their cooking needs. We will continue to explore opportunities for Dow technologies to assist Whaley, but wanted to know if you had any other suggestions (daycare, school, senior center, clinic, etc) with increased lead levels that may be in need of filters for drinking and cooking.

Best regards,

Kristen Bovid

Attached is the list of filtration devices that we have provided so far for the city of Flint residents. The only outstanding order we are aware of is the 2500 pitcher replacement filters scheduled for 1/18 delivery. As of last night, resources is reporting about 60,000 faucet filters and 60,000 replacement cartridges. I believe planning or logistics has the best idea as to how long that supply should last.

Good Afternoon Stan –
Thanks again for reaching out regarding the donation of filters.
Thru this email, Im introducing Wendy who is the Logistics Section Chief with our State Emergency Operations Center and can receive your generous donation. She will be contacting you soon to discuss details, in the meantime feel free to contact her at 517-333-7767 with any additional questions.

Thank you again for the donation and for participating in this effort. We appreciate your collaboration on this issue.

Thanks,
Melanie

Subject: Flint Water

Hi Keith
We at NSF International hope everything in Flint is on track to be resolved soon.
As you know, NSF International stands ready to support your efforts in any way possible. Please let us know if and when NSF International can be of service.
Today, our President/CEO Kevan Lawlor requested that I follow up with DEQ to donate $10,000 of water filters and/or cartridges for the residents of Flint.
If we can find out what is needed, we can work with our clients whose filters/cartridges are NSF tested and certified, to purchase the products and have them delivered to your distribution center(s).
Please advise who is the most appropriate person to contact regarding this donation.
Best regards
Stan

April /Mark

I would like to make a request of the state EOC.

Community members/residents with elevated lead results need immediate and direct follow up.

They are mailed an ambiguous lab report, which they are not trained to understand or interpret. The city also sends a letter using different measuring units than indicated on the MDEQ lab result.

I and my staff have talked with many residents and I try to screen the MDEQ results daily and follow up with the folks who have elevated levels. We don't have capacity to followup with all of them promptly.

They need immediate verbal or physical followed up along with the a mailed report to ensure water is not being consumed at that location.

Thanks Jim

How does this sound...

To get the facts about Legionella call 2-1-1, or go to Genesee County Health Department's website: gchd.us. Legionella information is located on the front page of the Health Department's website. You will find Legionella information in the Media Releases and Popular Pages columns on the front page.

Do we have an official Legionella graphic?

Subject: RE: Phone Calls

I hear you Hilda, I really do. Unfortunately we don't have staff to get that message out today, and I think for consistency, at this point, we need to stick with 211. Had we had a little more time to plan, that would have been possible. I think that is fine to post to Facebook, and I encourage you to do so. Please also refer people to 211.

-Tamara

Subject: RE: Phone Calls

If we spoon feed the media and public the information it will not be a problem. For example.

The Genesee County Health Department will be closed Friday, January 15 and Monday, January 18 in observance and honor of Martin Luther King Day.

To get the facts about Legionella go to Genesee County Health Department's website: gchd.us. Legionella information is located on the front page of the Health Department's website. You will find Legionella information in the Media Releases and Popular Pages columns on the front page.

Once again, I know this sounds mercenary, but we need to train people. If anything they need to learn our web address.

Subject: RE: Phone Calls

I just got a call from Jackie Scott. She confirmed that they are setting up a phone bank to answer lead and Legionella calls. They will answer calls from 8-5 through the weekend, but I got the impression that this is not a long term solution but rather a short term fix for us being closed for 4 days. She did not give me a number but said that 2-1-1 would be

forwarding calls to the phone bank. I forwarded her the Legionella press release that we released today as well as the fact sheet that was on our site so that they weren't giving out any information that conflicted with our messages.

I also pointed out that there was a general lack of trust in water in general in the city so they should be prepared for that when taking calls.

Subject: RE: FILTERS: Flint water main break

Update: I just received a call from the Flint Water Treatment Plant lab informing me that all of the results from the samples collected yesterday are non-detect for coliform bacteria. Again, there is no reason to believe at this point that any wide spread bacti contamination has occurred as a result of the water main break. Additional samples were collected today and those results will be available about this time tomorrow. If those sample results are good, the boil advisory can be lifted.

Subject: RE: FILTERS: Flint water main break

Update: I went to the Water Treatment Plant this morning and visited with the lab folks. 18 bacti samples were collected yesterday between 10 am and 1 pm throughout the city, not just in the lower pressure areas that occurred as a result of the water main break. There was good free chlorine residual at all the collection sites. The results from that sampling will be available about 1:30 pm today. We looked at the samples so far, and none were turning color. Again, there is no reason to believe at this point that any wide spread bacti contamination has occurred as a result of the water main break.

(MSP); Macqueen, Mary (DHHS); durno.mark@epa.gov
Subject: RE: FILTERS: Flint water main break

All,

I am sorry I was out of the UCG for much of the day when all this was developing. I understand a press release is nearly ready to go that will tell folks to replace their filter cartridges when the boil advisory is lifted. I am also sorry to see in the City's notice (link below) that they say the same thing. A boil notice for a water main break is precautionary, not because bacteria are actually known to exist in the water. The absence (or presence) of bacteria is confirmed after the water main break is repaired and bacti sample results are received, usually about 48 hours after the main is repaired. Only if bacteria are actually present in appreciable concentrations throughout the City does it makes sense to replace all the cartridges throughout the City. While we are waiting for bacti results, folks are protected by boiling the water.

https://www.cityofflint.com/wp-content/uploads/Precautionary-Boil-Water-Notice-2-9-16.pdf

Thanks. Bryce

Subject: RE: FILTERS: Flint water main break

NSF International confirmed:

When the boiled water advisory is lifted, filters exposed to contaminated water are safe to use after the cartridge has been replaced. The user should be sure to follow the manufacturer's replacement instructions as some have additional procedures that must be performed (rinsing, flushing the cartridge, resetting an indicator, etc.).

Please work with Wendy Braun to deliver accurate messaging to the citizens affected by the water main break.

Thank you,

JEN WOLF

All
A slightly modified statement that addresses lead reduction at the same time would be: "These filters are not certified to reduce microbiological contaminants from drinking water. Residents should boil their filtered water to ensure that their water is microbiologically safe. Residents should replace the cartridge / filter after the Boil Water Advisory has been lifted. The lead reduction capabilities of the filter should not be adversely affected by the presence of bacteria, if present."

Subject: Flint water main break

Mitch, Jen, and others,

So, I got what feedback I could and it is essentially what we had briefly discussed.

The standards are based on treating potable water, which is microbiologically safe water, so our certification to the standards would essentially be null and void if there is bacteria in the influent. This is akin to the issue of lead levels being over 150 ppb. The filters used in Flint are not certified to remove microbiological contaminants to drinking water. Residents should boil their filtered water to ensure that their water is microbiologically safe. The, replace the cartridge / filter after the Boil Water Advisory has been lifted.

Hope this gives you what you need. If you need anything else, please let me know.

So far 1 1/2 cases. We are setting to the side as we come across. Won't know the exact number until we go through all the cases (hopefully by the end of the week). Some cases have only a couple of caps missing, others there are entire rows missing caps. Please advise where you want me to take them. Lab, warehouse?

Hi,

The shipment received on Tuesday is from VWR. Referenced on line 18 of the attached spreadsheet. The shipment from Scientific Specialties (40 case, line 19) was slated to arrive on Monday, but delivery was attempted several times after 6 pm. It is to arrive by 5 pm today.

The only shipment received and tracked this week is from VWR. *Let's talk tomorrow and sort this out.*

Thanks, Tara

Hi Tara

Can you please check with Nina at VWR and see if she can help identify which orders arrived at the warehouse this week. MSP says we receive two shipments this week, 1 on Monday and 1 on Tuesday, and we think these are likely VWR bottles, but need some confirmation, and are swamped here. Any assistance you can provides is appreciated. Thanks

Subject: RE: Expediting sample Bottle Shipment from Environmental Express (EE)

Mitch,
The freight estimate for 100 individual cases would be $6,000 to ship UPS overnight. They would ship 1/19 for delivery 1/20. The overnight freight estimate for the 200 cases would be $12,000 to ship 1/21 and deliver 1/22. If you have a UPS account number that you prefer to use, we could use that instead? We would need to know soon (by 2PM ET) today if you prefer to ship UPS overnight versus LTL carrier for the 100 cases to get a large enough UPS truck in here.

ETA on another 10K or 138+ cases would be a ship date of 1/28 or 29. We already have 43,000 on order since this is one of our most common items.

Hi Lisa - You should have received a voicemail from one of my colleagues, Mitch Adelman, regarding the 400 cases of 32oz wide mouth bottles BPC1172 we ordered. See email below. I know you gave me an estimate on delivery for 100 shipping immediately, another 100 to ship on 01/21/16 and remaining 200 to be determined. Do you have any ideas on how we can get the remaining 300 cases shipped ASAP. Can you find out for me if there is a bottle manufacturing issue, bottle certification issue, or assembly issue (caps on bottles). We are working under a Federal Emergency. I am not in the office tomorrow, 01/18/16, but will be checking my emails.

Thank you,
Kirby

Subject: RE: Expediting sample Bottle Shipment from Environmental Express (EE)

Mitch,
The freight estimate for 100 individual cases would be $6,000 to ship UPS overnight. They would ship 1/19 for delivery 1/20. The overnight freight estimate for the 200 cases would be $12,000 to ship 1/21 and deliver 1/22. If you have a UPS account number that you prefer to use, we could use that instead? We would need to know soon (by 2PM ET) today if you prefer to ship UPS overnight versus LTL carrier for the 100 cases to get a large enough UPS truck in here.

ETA on another 10K or 138+ cases would be a ship date of 1/28 or 29. We already have 43,000 on order since this is one of our most common items.

Hi Lisa - You should have received a voicemail from one of my colleagues, Mitch Adelman, regarding the 400 cases of 32oz wide mouth bottles BPC1172 we ordered. See email below. I know you gave me an estimate on delivery for 100 shipping immediately, another 100 to ship on 01/21/16 and remaining 200 to be determined. Do you have any ideas on how we can get the remaining 300 cases shipped ASAP. Can you find out for me if there is a bottle manufacturing issue, bottle certification issue, or assembly issue (caps on bottles). We are working under a Federal Emergency. I am not in the office tomorrow, 01/18/16, but will be checking my emails.

Thank you,
Kirby

Attached is a list of the 3 different vendors we are using, with their respective product numbers. Basically we're talking about 1 liter plastic bottles.

The "kits" also are comprised of labels printed at the DEQ lab, with the lot number, assigned based on quality control testing done at the lab and not printed until testing is complete; and the attached sample request form which is affixed to the labeled bottle with a rubber band.

Subject: RE: Expediting sample Bottle Shipment from Environmental Express (EE)

Mitch,

The freight estimate for 100 individual cases would be $6,000 to ship UPS overnight. They would ship 1/19 for delivery 1/20. The overnight freight estimate for the 200 cases would be $12,000 to ship 1/21 and deliver 1/22. If you have a UPS account number that you prefer to use, we could use that instead? We would need to know soon (by 2PM ET) today if you prefer to ship UPS overnight versus LTL carrier for the 100 cases to get a large enough UPS truck in here.

ETA on another 10K or 138+ cases would be a ship date of 1/28 or 29. We already have 43,000 on order since this is one of our most common items.

Hi Lisa

Thanks for bumping up the shipping of 100 cs to 1/19 from 1/21, and the remaining 200 to 1/21. We will let you know as soon as we can whether we will be needing more bottles quickly as we are transitioning to possibly having FEMA ordering supplies. Thanks again!

All,
A little bit of good news. The next 100 have been bumped up to ship on Tuesday, 1/19 and the other 200 will ship on Thursday, 1/21. I will provide PRO #s as soon as I have them. Do you anticipate needing more quickly? If so, we can certainly bring in extra specifically for you.

Hi Lisa - You should have received a voicemail from one of my colleagues, Mitch Adelman, regarding the 400 cases of 32oz wide mouth bottles BPC1172 we ordered. See email below. I know you gave me an estimate on delivery for 100 shipping immediately, another 100 to ship on 01/21/16 and remaining 200 to be determined. Do you have any ideas on how we can get the remaining 300 cases shipped ASAP. Can you find out for me if there is a bottle manufacturing issue, bottle certification issue, or assembly issue (caps on bottles). We are working under a Federal Emergency. I am not in the office tomorrow, 01/18/16, but will be checking my emails.

Thank you,
Kirby

Hi Kirby

We've been directed to expedite delivery of the remaining 300 cases of the outstanding order from EE. I left Lisa Riley a voice mail message this afternoon, not expecting her to be in today, but hoping she may be working tomorrow. If you have any ideas on how we may seek expedited delivery before we have our 1:00 pm call on Tuesday, please let us know.

Thanks

Hi Tara

Can you please check with Nina at VWR and see if she can help identify which orders arrived at the warehouse this week. MSP says we receive two shipments this week, 1 on Monday and 1 on Tuesday, and we think these are likely VWR bottles, but need some confirmation, and are swamped here. Any assistance you can provides is appreciated. Thanks

Jen/Mitch

Subject: ACTION REQUIRED - FOLLOW UP: Sharing Information regarding Copper Filtration
Attachments: Copper filtration; COPPER.xlsx

Importance: High

Please see string and attachments for original request and additional information.

I spoke with George Krisztian who advised the following via text:

"If that's the case then we will probably need to get some RO filters for the homes that exceeded 1.3 PPM. Before we proceed with installations we should have the home checked to see if it is properly grounded. If it is an electrical issue then the grounding should be fixed and the a resample taken. Until a final resolution is implemented bottled water should be used"

At this point we need to reach out to the 31 entities in the current list and inform them to utilize bottled water for consumption. Plans for verifying grounding, installation of reverse osmosis filters and sampling need to be developed and implemented.

Please keep the SEOC informed of activities to address this issue.

Thank you,

Subject: ACTION REQUIRED: Sharing Information regarding Copper Filtration
Importance: High

- ACTION ITEM- INFO RECEIVED
- SME: RICHARD BENZIE
- SUGGESTED DEADLINE: ASAP

NSF advised today that the filters currently distributed are not certified to remove copper. There are some pitcher filtration systems which are certified to remove copper but not lead. There are some under the sink reverse osmosis systems that will remove both. The cost of these systems range from $200 to $1000's.

NSF will provide the information they conveyed over the phone in a follow up email along with indentification of those systems which are certified. I will forward as soon as received.

Please keep the SEOC informed of response to this information.

Subject: Copper filtration
Attachments: Listing Category Search Page NSF International Standard 53 - Copper.mht; Listing Category Search Page NSF International Standard 58 - lead and copper.mht

Thanks Jen for the call today and for contacting us for this information, we are pleased to help.

You asked NSF International about what concentration of copper the NSF certified filters are certified for. Per the discussion with Rob Herman, Director of the Ann Arbor Labs and myself, the filters which have been distributed in Flint for lead reduction are not NSF certified for copper reduction. **They are certified for lead reduction. (note: these products may be certified for many contaminants other than lead, just not copper)**

NSF/ANSI Standard 53 and 58 specify 3000 ppb (3 mg/L) as the influent for copper with a maximum allowed filtered level of 1300ppb (1.3 mg/L) (USEPA MCL). Copper is a separate claim from lead but there are products that are NSF Certified for both contaminants.

There are several NSF/ANSI Standard 58 certified reverse osmosis (RO) systems that are certified for both lead and copper reduction. These could possibly be placed in homes with high copper levels to reduce the lead as well as the copper. These are typically under sink or counter top systems that are plumbed in to separate taps and are not available as faucet mount models. I have attached a file (web archive file) that shows the RO units that are certified to reduce lead and copper. It can be viewed online or offline.

Additionally, here is a link to the list of RO units that are certified to reduce lead and copper:

http://info.nsf.org/Certified/DWTU/Listings.asp?ProductFunction=058%7CCopper+Reduction&ProductFunction=058%7CLead+Reduction&ProductType=&submit2=Search

There are NSF/ANSI Standard 53 pour through filter pitchers that will remove copper but these do not also remove lead. Thus there would have to be a double-filtering of the water through each filtering system; one to remove the lead and a second pitcher to remove the copper – filtering the water through two systems. I have also attached a file that shows the pour through units that are certified to reduce copper.

And here is a link to the list of pour though units that are certified to reduce copper:

http://info.nsf.org/Certified/DWTU/Listings.asp?ProductFunction=053%7CCopper+Reduction&ProductType=&submit2=Search

Please feel free to contact me if there is anything else I can assist with.

Regards,

Derek DeLand

Subject: FW: Full List of Residential Results for February 7, 2016
Importance: High

Hi Darlene, Attached please find for posting to the Flint Water website, the Residential Results as of February 7, 2016. This information has also been provided to Meegan Holland.

Please let me know if you have any questions.

This note is for Sunday, February 7, 2016. There were changes in the report so, if Darlene could make the title the following for the web, everything should be clear: "Flint Residential Testing Report – results collected through February 5, 2016 (posted February 7, 2016)" or something equivalent. ☺

Please find attached the full list of residential results through the date listed above (5 attachments). Please note that this version includes concentrations in ppb and the street number is separated from street name to make it easier to find the address. Also, there are pdfs of the two worksheets for people who don't have Microsoft office. All have been prepped for the web minus the naming convention that is usually used. I will follow this format going forward. **If I fail to do that then please let me know**:

1. For the accordion on the lower left under the title "School and Residential Testing Results, the following are to Replace current and see above for language changes (3 attachments):

   Asset # 512083 – February 7 2016 Test Results Flint.xlsx
   Asset# 512511 – February 7 2016 Test Results Flint_Sorted By Address.pdf
   Asset# 512510 – February 7 2016 Test Results Flint_Sorted by Lead Concentration.pdf

2. For the same accordion underneath the DEQ reports to EPA, The Test Results Flint DEQ Reports to the EPA Asset needs updating (1 attachment):

   Asset# 512820 - February 7 2016 Test Results Flint_DEQ Reports to the EPA.xlsx

3. The following is for the MSP-SEOCGIS for geocoding (1 attachment) and not prepped for the web; Please send to **MSP-SEOCGIS@michigan.gov and MSP-SEOCGIS2@michigan.gov**

   February 7 2016 Test Results Flint_For MSP-SEOCGIS.xlsx

4. Calculations as requested:

   Total number of samples: 7948

   7430 out of 7948 (94%) are at or below 15 ppb (518 above)
   <5 ppb: 6513 (82%)
   5-15 ppb: 917(11%)
   > 15 ppb: 518 (7%)
   >30 ppb: 279 (4%)
   >100 ppb: 87 (1%)
   >150 ppb: 62 (0.8%)

Please note that the results are for all samples reported out through today February 7, 2016 in all documents. In addition, the workbooks (XLSX) contains two tabs: One has the data sorted by Lead concentration and the other is sorted by address.

Posting this data in a timely manner upon approval from the Governor's office is of the essence so that we can comply with the order issued by EPA.

Please post this to the website ASAP and make sure that all are posted so that people can look at the version that they are interested in.

Thank you!!!

MSP-EOC-MDEQ

From: Meka, John (DNR)
Sent: Monday, February 01, 2016 1:28 PM
To: MSP-EOC-MDEQ
Subject: updated spreadsheet with graphs
Attachments: Water Test Reluts by Month With Percentages and Totals.xlsx

Jen,

I have a version of the spreadsheet with graphs I came up with on my laptop so I can update it remotely when not on the SEOC computer desk top. Here is the most current version until other sample results come in. The one at SEOC is called "Water Test Results by Month With Percentages" where this version I added "and Totals" so I can tell the difference.

MSP-EOC-MDEQ

From: MSP-EOC-MDEQ
Sent: Sunday, January 31, 2016 1:49 PM
To: Katarsky, Anthony (MSP); Wolf, Jennifer (DNR); Adelman, Mitch (DEQ)
Subject: Test results spreadsheet
Attachments: Water Test Reluts by Month With Percentages.xlsx

To all,

Please review the spreadsheet (with graphs) and let me know what you think. The top one is # tests at the established thresholds, and the bottom one is percentages. Note that the order in thresholds from the top chart is different from the bottom. I switched it around so the graph looks better (higher numbers/percentages to the back of the graph so it doesn't cover up the smaller cylinders). It is interesting to note that the percentage at or below 15ppb is consistent at around 93% (88% being the lowest percentage and 94% the highest).

To: Meka, John (DNR); MSP-EOC-MDEQ
Subject: Draft Gov Stats
Attachments: Draft Gov Stats Thru Jan 28.xlsx

Attached is one possible version.

I also suggest we submit a request to the ECC to automate the "report" using the daily spreadsheet from the lab, using whatever template we agree on. A draft request suitable for cutting and pasting into a note from EOC-DEQ to ECC is included below:
****

Hi Sue

DEQ has received a request from the Governor's office for more detailed statistics on the water test sampling results. Is there someone in the ECC that can take the daily sample results that the lab compiles into a spreadsheet for posting on the web, and produce a report with the requested information. We used yesterday's spreadsheet to generate the attached draft that we think is in a suitable format. Note that the request asks for lead levels "at or above 15 ppb) yet we think it should be "above 15 ppb", which we'll verify.

Mitch

This note is for Thursday January 28, 2016

Please find attached the full list of residential results. Please note that this version includes the sample number and the address. I will follow this format going forward. **If I fail to do that then please let me know.**

Please note that the results are for all samples reported out through today January 28, 2016. In addition this spread sheet contains two tabs. One has the data sorted by concentration and the other is sorted by address.

Posting this data in a timely manner is of the essence so that we can comply with the order issued by EPA.

Please post this to the website ASAP and make sure that both tabs are posted so that people can look at the version that they are interested in.

Thank you!!!

Attachments:	Flint Home Owner Data September 3, 2015 thru January 20, 2016.xlsx
Follow Up Flag:	Follow up
Flag Status:	Completed

Attached is all of the data available when I ran the query earlier today. It includes lead and copper since I am trying to have one report fill multiple purposes.

Linda,
Here is the updated information and there are two tabs. On one tab the data is sorted by concentration and on the other tab the data is sorted by zip code.

Mel,
I think we need to remove the address if we post this to the website, that is how we handled the November data that was posted. I believe that we should protect the privacy of the individuals that submitted samples when it comes to publishing personal information (addresses) on a website. There are no names but I just want to be sensitive to the issue.

Director, I leave the final decision to you as to yea or nay with respect to addresses on the website.

George

Subject: RE: residential lead > 100ppb

The report has been updated to reflect the units of measure. The query name has been also updated. Query names cannot contain periods, so it indicates 1/10 mg/L rather than 0.100 mg/L.

Here is an example:

Flint More Than 1/10 of a mg/L (100 PPB)						
SAMPNO	ACODE	ANALYTE	RESULT (in mg/L)	ADDRESS	CITY	ZIP CODE
123456	PB	Lead	0.327		DURANGO	99999
234567	PB	Lead	0.157		DURANGO	99999
345678	PB	Lead	0.213		DURANGO	99999
456789	PB	Lead	0.764		DURANGO	99999

For those unfamiliar with parts per million and parts per billion there are 1000 parts per billion in a part per million. To get to parts per billion simply move the decimal three places to the right. Thus 0.327 mg/L becomes 327 parts per billion. Our results are in mg/L as that is the mandated unit of measure.

Subject: Re: residential lead > 10 0ppb

At least put a note in the e-mail explaining the discrepancy between the heading on the table and the presentation of the results.

Julia,

I'm again requesting that this table be corrected. The heading indicates parts per billion (ppb) but the results are actually in parts per million. Please report all water test results in ppb to avoid any confusion on the part of those who may be unfamiliar with environmental data and the conversions from ppm to ppb.

Subject: RE: residential lead samples >100 ppb

Julia

Thank you for sending the elevated lead sample reports. To assist in our effort to efficiently and effectively communicate the results across all partners and to residents, please continue to send the PDF results and use the table shell below when sending future elevated test results.

Also, please add three people to the distribution list (emails are included on the "To" line). Each will be assisting with the logging and coordination of the home visits after my deployment ends (final working day is Wednesday).

- Troy Ritter, CDC
- Rosemary Pearson-Clarke, CDC
- Mary Boulton, GCHD

Thank you, again.

Matt Ritchey, USPHS, CDC

Julia
Could you please scan the sample request forms for Sample numbers LG07364 and LG07383 *samples from* MDARD, in attempt to get a better answer as to how to handle MDARD sample results > 100 ppb? Thanks

Mitch

See below. Can you provide a copy of the original sample slips?

From: Besey, Kevin (MDARD)
Sent: Thursday, February 04, 2016 10:35 AM
To: MSP-EOC-MDARD; Walker, Sandra (MDARD); Tilden, John (MDARD)
Subject: RE: Residential samples>100 ppb lead

Not to our knowledge. Copies of the original sample slips would be really helpful.

To: MSP-EOC-MDEQ
Cc: Shane, Kirby (DEQ); Smith, Carol (DEQ)
Subject: RE: Residential samples>100 ppb lead

Sample numbers LG07364 and LG07383 are samples for MDARD, not residential. That is why they did not appear on the spreadsheet. Do you need notification of these as well? The reports were sent to MDARD.

Hi Julia

I need to double check something. Is there a chance that two sample results > 100ppb were reported on 2/3/2016 that you didn't have a chance to copy us on? We have two notes from you today with sample results > 100 ppb. Only one of those results, Sample # LG07032, is > 150. The other two results > 100 we got copied on are sample #'s: LG07601 & LG07654.

When we got the spreadsheet with results through today, two other samples for which we don't have the note from you have concentrations > 100: i.e. sample #'s LG07383 & LG07364.

No big deal if you couldn't get us that note with the latter 2 sample results before you left today, we're just wanting to make sure that the numbers that we report to the Governor are solid. Thanks!

Mitch

Subject: high lead results

We received two samples with very high lead results from . This was part of an extensive sampling where 9 of 38 samples from this address were above the MCL for lead. This appears to be a house operating as Whaley Children's Center per Google.
LF99183-#18 art room sink 0.848 mg/L lead, 1.66 mg/l Copper
LF99185 #17 school drinking fountain 0.158 mg/L lead, 2.20 mg/L copper

I just wanted to make you aware of this.

Subject: RE: residential lead > 100ppb

The report has been updated to reflect the units of measure. The query name has been also updated. Query names cannot contain periods, so it indicates 1/10 mg/L rather than 0.100 mg/L.

Here is an example:

Flint More Than 1/10 of a mg/L (100 PPB)						
SAMPNO	ACODE	ANALYTE	RESULT (in mg/L)	ADDRESS	CITY	ZIP CODE
123456	PB	Lead	0.327		DURANGO	99999
234567	PB	Lead	0.157		DURANGO	99999
345678	PB	Lead	0.213		DURANGO	99999
456789	PB	Lead	0.764		DURANGO	99999

For those unfamiliar with parts per million and parts per billion there are 1000 parts per billion in a part per million. To get to parts per billion simply move the decimal three places to the right. Thus 0.327 mg/L becomes 327 parts per billion. Our results are in mg/L as that is the mandated unit of measure.

George

Subject: Re: residential lead > 10 0ppb

At least put a note in the e-mail explaining the discrepancy between the heading on the table and the presentation of the results.

Julia,

I'm again requesting that this table be corrected. The heading indicates parts per billion (ppb) but the results are actually in parts per million. Please report all water test results in ppb to avoid any confusion on the part of those who may be unfamiliar with environmental data and the conversions from ppm to ppb.

Subject: RE: residential lead samples >100 ppb

Julia

Thank you for sending the elevated lead sample reports. To assist in our effort to efficiently and effectively communicate the results across all partners and to residents, please continue to send the PDF results and use the table shell below when sending future elevated test results.

Also, please add three people to the distribution list (emails are included on the "To" line). Each will be assisting with the logging and coordination of the home visits after my deployment ends (final working day is Wednesday).

- Troy Ritter, CDC
- Rosemary Pearson-Clarke, CDC
- Mary Boulton, GCHD

Thank you, again.

Matt Ritchey, USPHS, CDC

Julia
Could you please scan the sample request forms for Sample numbers LG07364 and LG07383 samples from MDARD, in attempt to get a better answer as to how to handle MDARD sample results > 100 ppb? Thanks

Mitch

See below. Can you provide a copy of the original sample slips?

From: Besey, Kevin (MDARD)
Sent: Thursday, February 04, 2016 10:35 AM
To: MSP-EOC-MDARD; Walker, Sandra (MDARD); Tilden, John (MDARD)
Subject: RE: Residential samples>100 ppb lead

Not to our knowledge. Copies of the original sample slips would be really helpful.

To: MSP-EOC-MDEQ
Cc: Shane, Kirby (DEQ); Smith, Carol (DEQ)
Subject: RE: Residential samples>100 ppb lead

Sample numbers LG07364 and LG07383 are samples for MDARD, not residential. That is why they did not appear on the spreadsheet. Do you need notification of these as well? The reports were sent to MDARD.

Hi Julia

I need to double check something. Is there a chance that two sample results > 100ppb were reported on 2/3/2016 that you didn't have a chance to copy us on? We have two notes from you today with sample results > 100 ppb. Only one of those results, Sample # LG07032, is > 150. The other two results > 100 we got copied on are sample #'s: LG07601 & LG07654.

When we got the spreadsheet with results through today, two other samples for which we don't have the note from you have concentrations > 100: i.e. sample #'s LG07383 & LG07364.

No big deal if you couldn't get us that note with the latter 2 sample results before you left today, we're just wanting to make sure that the numbers that we report to the Governor are solid. Thanks!

Mitch

Kathy,

In addition to the number of people, could you please give us a breakdown of the areas reporting the numbers. We need these for 2/11 and 2/12/16.

Thank you.

Subject: RE: ACTION REQUEST: NUMBER OF DEQ STAFF ON THE GROUND IN FLINT

Kathy,

Thank you for the information for today's projection for people on the ground. Could you please verify the information in red below for the number of people on the ground on 2-11-16.

Also, please send communications directly to the MDEQ-ECC-IMT@michigan.gov. I will forward to the team. We have some staff transitioning, and we are trying to avoid communications going to those who have left the team.

Thank you.

Subject: ACTION REQUEST: NUMBER OF DEQ STAFF ON THE GROUND IN FLINT

Please respond with the following information as soon as possible:

ACTION REQUEST: Please provide us with the number of DEQ Staff on the ground in Flint

PERSON RESPONSIBLE: Kathleen Shirey, DEQ

DEADLINE [DATE AND TIME]: ASAP

COMMENTS: You had indicated at the Planning Meeting on 2-10-16 that there would be 17 DEQ staff on the ground in Flint today (2-11-16). Can you please verify. Also, can you please provide this daily in an e-mail format prior to the planning meeting at 3:30 each day.

Thank you.
